until control is evident. Make subsequent slug addition of 2.9 to 8.6 fl. oz. of BSC-304 per 1000 gal. of water (15 to 45 ppm BSC-304) every 2 to 5 days or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made in the sump of recirculating cooling tower systems.

BSC-304 is used in industrial air-washing systems which maintain effective mist-eliminating components. Prior to its use, systems should be cleaned to remove bacterial slime and other deposits. An initial slug dose of 13.5 to 17.2 fl. oz. of BSC-304 per 1000 gal. of water is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 10.0 to 17.2 fl. oz. of BSC-304 per 1000 gallons of water should be employed every 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and severity of the bacterial problem. Slug additions may be made to the sump or the water collection trays of the airwash system.
