SUPPLEMENTAL LABEL
FOR USE IN CALIFORNIA ONLY

AZINPHOSMETHYL 50W SOLUBLE

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

This label must be in possession of user at time of application

Follow all restrictions and precautions on labeling attached to product.

NOTE: Preharvest Interval days indicated in () after each use.

ALMONDS: (28)

-Peach twig borer, Navel orangeworm - 3 to 4 lbs.
Apply specified dosage per acre by concentrate sprayer or as a full coverage spray using not more than 400 gallons of finished spray per acre. Use a minimum of 20 gallons of water per acre when applying aerially. Limit application to one dormant spray and/or two post bloom sprays per season. Allow 120 days between the dormant and the first post-bloom spray. Allow at least 28 days between the first and second post-bloom sprays. The second post-bloom spray may be applied as a split application as described below. Allow at least 28 days between the first post-bloom spray and the first spray of the split application.

Split Application Spray Schedules

#1: Apply 2 lbs. per acre at the onset of hullsplit. Follow 5 to 10 days later by a second 2 lb. treatment. Both applications must be made to achieve control.

Or

#2: Apply 4 lbs. per acre at the onset of hullsplit to every other row, followed 5 to 10 days later by a 4 lb. per acre spray to the alternate rows not already sprayed with the first application.

Do not apply more than a total of 4 lbs. of finished product (2 lbs. a.i.) per acre when using one of these split application schedules.

Note: To determine the onset of hullsplit, monitor nuts in the top of the canopy. Coverage is critical in the suture area. If splitting applications, be sure to apply both of the recommended treatments in the selected spray schedule.

Do not graze livestock for 21 days after treatment.
