CONTROLS ALGAE, FUNGI, AND BACTERIAL SLIME IN COOLING TOWERS AND EVAPORATIVE CONDENSERS

CONTENTS: 3 1/2 US GALLONS (13.3 LITERS)

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMAN AND DOMESTIC ANIMALS

CAUTION: Harmful if swallowed. Causes skin and eye irritation. Do not get in eyes. Avoid contact with skin and clothing. Wash contaminated skin promptly with soap and water. Avoid contact with food. **KEEP OUT OF REACH OF CHILDREN.**

DISPOSAL:

Do not reuse empty container. Wrap container and put in trash collection.

STATEMENT OF PRACTICAL TREATMENT

If swallowed: Call a physician immediately.

If in eyes: Flush with plenty of water. Get medical attention if irritation persists.

If on skin or clothing: Remove contaminated clothing and wash before reuse. Wash skin with soap and warm water. Get medical attention if irritation persists.

ENVIRONMENTAL HAZARDS

This product is toxic to fish and other aquatic invertebrates. Treated effluent should not be discharged where it will drain into lakes, streams, ponds or public water. Do not contaminate water by cleaning of equipment or disposal of waste.

DIRECTIONS FOR USE: It is a violation of Federal Law to use this product in a manner inconsistent with labeling. CWT-BB100 is placed in the sump of the water cooling tower to control algae, bacteria and fungi in recirculating commercial and industrial towers. Before using, clean strainers and remove spray nozzle restrictions. Clean the rest of the system thoroughly by mechanical means or with Liquid Descalit or Dri-Descalit acids to remove algal growth, microbiological slime and other deposits. Be sure to remove all acid from the system before using CWT-BB100. When dosage is determined, run the circulating pump for 24 hours or longer with regular bleed. Then drain and flush out all organic material. Faster results can be achieved if it is possible to close the bleed valve for a period of time.

DOSAGE: An initial slug of 1 to 2.5 fluid ounces is recommended per 1000 gallons of water. It will provide a CWT-BB100 concentration of 8 to 20 parts per million, based upon the total weight of the water in the system. Subsequent slug additions of .25 to 2.5 fluid ounces, on the same basis, will provide a concentration of 2 to 20 parts per million. This should be repeated every 2 to 5 days or as often as necessary until control is achieved. The frequency is dependent upon bleed-off rate and the severity of the microbiological problem.

If water content is not know, use the following chart as an approximation of dosage, repeating until control is achieved.

CAPACITY IN TONS	INITIAL SLUG (Fl. Oz.)	SUBSEQUENT SLUGS (Fl. Oz.)
10	.6 to 1.5	.15 to 1.5
25	1.5 to 3.8	.38 to 3.8
50	3 to 7.5	.75 to 7.5
100	6 to 15	1.5 to 15

Active ingredient:
 Poly [oxyethylene (dimethyliminio) ethylene (dimethyliminio) ethylene dichloride] 80%
 Inert ingredient: 40%
 100%
