06 MAR 1992

CH Products Corporation c/o Mr. Eliot Harrison Delta Management 1414 Fenwick Lane Silver Spring, MD 20910

Dear Mr. Harrison:

Subject: Revised Labeling

CH Formula No.9 Bug Killer

EPA Registration Number 51699-1 Submission dated February 28, 1992

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable. A stamped copy is enclosed for your records.

Sincerely,

Richard F. Mountfort
Product Manager (10)
Insecticide-Rodenticide Branch
Registration Division

DIRECTIONS FOR USE

It is a violation of Federal Law to the product in a manner inconsistent with its labeling. CH Formula No. 9 Bug Killer is especially designed for Automatic Dispensers. One unit for each 6,000 cubic feet of space to be treated is recommended. A specific amount of concentrated insecticide is automatically released every 15 minutes through the periodic activation of the CH Automatic Commercial Dispensers. After two hours of operation, enough insecticide is suspended in the air to lottle portion of the flies, gnats, or mosquitoes present thereby greatly reducing their numbers. Effectiveness of CH Formula No. 9 Bug Killer will be noticed within one hour after the CH Automatic Dispenser has been activated. It less than 24-hours of insect control is required, the CH Automatic Dispenser should be set to start one hour after control is required and allowed to continue to run one hour after control is no longer necessary.

The rate of air change, shape of space to be treated, temperature, humidity, and other conditions affect insect activity. Although one C.H. Automatic Dispenser per each 6,000 cubic feet of space may be considered as average, edjustments should be made if necessary depending upon the conditions under which the units are to be used. Large drafts of forced ventilation may reduce or eliminate the insecticidal efficacy of these installations.

The 6.5 ounce and 10 ounce cans of C-H Formula No. 9 Bug Kiter contains approximately 3,100 "shots" and will operate at 15-minute intervals for a total of 780 hours or 32 days on a continuous 24-hour basis, or 64 days on a 12 hour basis. It operating on a 24-hour basis container should be replaced once a month. If operating on a 12-hour basis container should be replaced every two mo sits. To replace aerosol container, \$it lid and snap aerosol onto mounting cup and close lid and your C-H Automatic Commercial Dispenser Unit is ready to operate.

Do not use in areas where infant, ill or aged person or pets (especially birds and fish) will be continually exposed. As with any method of insect control, improved performance is achieved when good sanitary practices are followed. Find and dispose of all insect-infested foods/drinks/feeds, packaged goods, etc. in the area

FOR USE IN: Food handling and food preparation areas of restaurants and food processing plants and in: stores, farms, dames, barns, kennels, factories, schools, hotels, motels offices, ships supermarkets, food warehouses, bottling plants, hospitals, egg and milk handling areas of dairies and chicken houses.
