IF	SWALLOWED:	Get Medical Attention	
IF	IN EYES:	Flush Eyes with Water for 15 Minutes	
		Get Medical Attention	
IF	ON SKIN:	Wash Skin with Soap and Water	

ENVIRONMENTAL HAZARDS

This product is toxic to fish. Do not apply directly to water. Do not not apply when conditions favor drift from target areas. Do not feed treated grass clippings to livestock.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

READ THE ENTIRE LABEL before using this product. This product is a pre-emergence herbicide with fertilizer which is applied to established to for the control of annual bluegrass(Pos Annual) turfs and fine-leaved fescues at rates above 215 pounds per acre (2 lbs. active ingredient). This product should not be applied in the spring to turf grass planted the previous fall. Over application can weaken turf grass during hot and dry or over wet stress periods, allowing fungus or insects to cause damage. In bermuda grass that has been over-seeded with wintergrass, a spring application of this product should not be used on dichondra or bentgrass turf or applied to newly sprigged areas of bermudagrass, St. Augustine grass or centipede grass until these turfs are well established. Keep out crabgrass, goosegrass, foxtail and barnyard grass by effectively killing the sprouting seed. This product is not for pasture use. Easy to apply with standard seed and fertilizer spreaders.

WHEN TO APPLY: Apply to turf before the germination of annual grass weed. General times of application are discussed below for each type of weed. Precise time of application for a specific area will vary because of climate and individual cultural practices. Consult agricultural experimental station or extension service turf grass specialist or your local nursery for additional information regarding specific weed germination times in your area.

HOW TO APPLY: For best crabgrass control, this product must be applied evenly over your lawn without skips or misses. Determine the correct amount for your lawn area. Do not over apply or under apply. Apply the contents of this bag for every 5,000 square feet of lawn area. Apply evenly with a lawn spreader with a two pass application, criss-crossing the area at half the rate each time. When the two step procedure is not practical, apply this product in one trip over the lawn, using the one-step setting listed islow. Be careful to cover the lawn completely since crabgrass can grow in spots where missed.

This 20 pound bag should be used on 5000 square feet. Apply evenly with a lawn spreader either as one pass application or a two pass application, criss-crossing the area at half the rate each time. The following settings are approximate for applying contents of this package at the above suggested rate. Check your spreader on 250 square feet and adjust to apply at the rate of 1 lb. per 250 square feet. Settings can vary with type, age and cordition of spreader. Settings are based on an average walking speed. Reduce setting for slower speed: raise setting for higher speed. Clean spreader thoroughly after high.
