DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

MICROBIOCIDES #6 is used to control bacteria and fungi in recirculating commercial and industrial air wash systems. Upon its use, systems must be cleaned to remove slimes, and other deposits. An initial slug addition of fluid ounces of MICROBIOCIDES #6 per 1000 gallons of water to provide a concentration of 8 parts per million of MICROBIOCIDES #6 in the system, is recommended. Repeat initial slug additions of 0.2 parts per million of MICROBIOCIDES #6 per 1000 gallons of water should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the bacterial problem. Slug additions should be made in the supply air stream. MICROBIOCIDES #6 is used in air-washing systems that maintain effective moisture content. Upon its use, systems should be cleaned to remove deposits. An initial slug dose of 3.33 parts per million of MICROBIOCIDES #6 per 1000 gallons of water should be employed every 2 to 5 days, or as needed. Repeat initial dosage until control is achieved. 2.25 to 5.55 fluid ounces of MICROBIOCIDES #6 per 1000 gallons of water should be employed every 2 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the bacterial problem. Slug additions may be made in the collection trays of the airwash system.
