

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY WASHINGTON, DC 20460

OFFICE OF CHEMICAL SAFETY AND POLLUTION PREVENTION

September 29, 2022

Leanna Bosarge Director, Regulatory Affairs Control Solutions, Inc. 5903 Genoa-Red Bluff Pasadena, TX 77507-1041

Subject: Registration Review Label Mitigation for Azoxystrobin

Product Name: CSI 15-114 AZOXYSTROBIN

EPA Registration Number: 53883-393

Application Date: 06/17/2019 Decision Number: 587849

Dear Leanna Bosarge:

The Agency, in accordance with the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, has completed reviewing all the information submitted with your application to support the Registration Review of the above referenced product in connection with the Azoxystrobin Interim Decision, and has concluded that your submission is acceptable. The label referred to above, submitted in connection with registration under FIFRA, as amended, is acceptable.

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. You must submit one copy of the final printed labeling before you release the product for shipment with the new labeling. In accordance with 40 CFR 152.130(c), you may distribute or sell this product under the previously approved labeling for 12 months from the date of this letter. After 12 months, you may only distribute or sell this product if it bears this new revised labeling or subsequently approved labeling. "To distribute or sell" is defined under FIFRA section 2(gg) and its implementing regulation at 40 CFR 152.3.

Page 2 of 2 EPA Reg. No. 53883-393 Decision No. 587849

If you have any questions about this letter, please contact Srijana Shrestha by phone at 202-566-2329, or via email at <a hrestha.srijana@epa.gov.

Sincerely,

Linda Arrington, Branch Chief

Risk Management and Implementation Branch 4

Pesticide Re-Evaluation Division

Office of Pesticide Programs

Enclosure: Stamped Label

AZOXYSTROBIN GROUP 11 FUNGICIDE

CSI 15-114 Azoxystrobin

Broad Spectrum fungicide for control of plant diseases [ABN: Strobe 2L, Quali-Pro Strobe 2L]

•	methyl (E)-2-{2-[6-(2-cyand hoxyacrylate*	ophenoxy) pyrimidin-4-yloxy]	
TOTAL:		ACCEPTED	100.00%
*IUPAC Contains 2.04 lbs Suspension Conc	. of Azoxystrobin per gallon entrate	Sep 29, 2022 Under the Federal Insecticide, Fungicide and Rodenticide Act as amended, for the pesticide registered under EPA Reg. No. 53883-393	
ADAMA	Manufactured for: Control Solutions, Inc. 5903 Genoa Red Bluff Pasadena, TX 77507	EPA	A Reg. No: 53883-393 A Est. No: t Contents:

KEEP OUT OF REACH OF CHILDREN CAUTION

Si usted no entiende la etiqueta, busque a alguien para que se la explique a usted en detalle. (If you do not understand the label, find someone to explain it to you in detail.)

See additional precautionary statements and directions for use in booklet.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact SafetyCall[®] International for emergency medical treatment at (866) 897-8050.

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION: Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Remove and wash contaminated clothing before reuse.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks

Consumer & Professional

In addition, mixers/loaders supporting chemigation or groundboom applications, must wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any N, R or P filter; OR a NOISH-approved

elastomeric particulate respirator with any N, R or P filter; OR a NIOSH-approved powered air purifying respirator with HE filters.

In addition, mixers/loaders/applicators using mechanically pressurized handwands except when applying to Christmas tree farms, nursery ornamentals, golf course turf (tees, greens, fairways), and landscaping, must wear a minimum of a NIOSH-approved particulate filtering facepiece respirator with any N, R or P filter; OR a NIOSH-approved powered air purifying respirator with HE filters.

For Non-WPS Uses - Respirator fit testing, medical qualification, and training:

Using a program that conforms to OSHA's requirements (see 29 CFR Part 1910.134), employers must verify that any handler who uses a respirator is:

- · Fit-tested and fit-checked,
- Trained, and
- Examined by a qualified medical practitioner to ensure physical ability to safely wear the style of
 respirator to be worn. A qualified medical practitioner is a physician or other licensed health care
 professional who will evaluate the ability of a worker to wear a respirator. The initial evaluation consists
 of a questionnaire that asks about medical conditions (such as heart condition) that would be
 problematic for respirator use. If concerns are identified, then additional evaluations, such as a physical
 exam, might be necessary. The initial evaluation must be done before respirator use begins. Handlers
 must be reexamined by a qualified medical practitioner if their health status or respirator style or useconditions change.

Upon request by local/state/federal/tribal enforcement personnel, employers must provide documentation demonstrating how they have complied with these requirements.

Human flagging is prohibited.

USER SAFETY REQUIREMENTS

Follow the manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

ENGINEERING CONTROLS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR 170.240 (d)(4-6), the handler PPE requirements may be reduced or modified as specified in the WPS.

IMPORTANT: When reduced PPE is worn because a closed system is being used, handlers must be provided all PPE specified above for "applicators and other handlers" and have such PPE immediately available for use in an emergency, such as a spill or equipment breakdown.

USER SAFETY RECOMMENDATIONS

Users should:

- 1. Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Wash thoroughly with soap and water after handling.
- 2. Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- 3. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

ENVIRONMENTAL HAZARDS

This pesticide is toxic to freshwater and estuarine/marine fish and aquatic invertebrates. Do not apply directly to water except as specified on this label. For terrestrial uses, do not apply directly to water, or to areas where surface water is present or to intertidal areas below the mean high water mark. Drift and runoff may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water when disposing of equipment washwater or rinsate.

Ground Water Advisory

Azoxystrobin and a degradate of azoxystrobin are known to leach through soil to ground water under certain conditions as a result of label use. This chemical may leach into ground water if used in areas where soils are permeable, particularly where the water table is shallow.

Surface Water Advisory

This product may impact surface water quality due to runoff of rain water. This is especially true for poorly draining soils and soils with shallow ground water. This product is classified as having a high potential for reaching surface water via runoff for several months or more after application. A level, well-maintained vegetative buffer strip between areas to which this product is applied and surface water features such as ponds, streams, and springs will reduce the potential loading of azoxystrobin and a degradate of azoxystrobin from runoff water and sediment. Runoff of this product will be reduced by avoiding applications when rainfall or irrigation is expected to occur within 48 hours. Notify State and/or Federal authorities and Control Solutions, Inc. immediately if you observe any adverse environmental effects due to use of this product.

PHYSICAL AND CHEMICAL HAZARDS

Do not mix or allow coming into contact with oxidizing agent. Hazardous chemical reaction may occur.

DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

FAILURE TO FOLLOW THE USE DIRECTIONS AND PRECAUTIONS ON THIS LABEL MAY RESULT IN PLANT INJURY OR POOR DISEASE CONTROL.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 4 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water is:

Coveralls

- Chemical-resistant gloves made of any waterproof material such as polyvinyl chloride, nitrile rubber or butyl rubber
- Shoes plus socks

NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses. The area being treated must be vacated by unprotected persons.

Do not treat areas while unprotected humans or domestic animals are present in the treatment areas. Because certain states may require more restrictive reentry intervals, consult your State Department of Agriculture for further information.

Do not allow entry into treatment area until area that was treated with this product is dry.

PRODUCT INFORMATION

CSI 15-114 Azoxystrobin is a broad spectrum, preventative fungicide with systemic and curative properties recommended for the control of many important plant diseases. These additional benefits are due to positive effects on plant physiology. The effects may vary according to factors such as the crop, crop hybrid, or environment. **CSI 15-114 Azoxystrobin** may be applied as a foliar spray in alternating spray programs or in tank mixes with other registered crop protection products. All applications must be made according to the use directions that follow.

USE RESTRICTIONS

- DO NOT spray **CSI 15-114 Azoxystrobin** where spray drift may reach apple trees.
- DO NOT use spray equipment which has been previously used to apply CSI 15-114 Azoxystrobin to spray
 apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple
 varieties.
- DO NOT graze or feed clippings from treated turf areas to animals.
- DO NOT spray when conditions favor drift beyond area intended for application. Conditions which may contribute to drift include thermal inversion, wind speed and direction, sprayer nozzle/pressure combinations, spray droplet size, etc. Contact your State extension agent for spray drift prevention guidelines in your area.

USE PRECAUTIONS

- CSI 15-114 Azoxystrobin is extremely phytotoxic to certain apple varieties.
- AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to apple trees (and apple fruit).
- AVOIDING SPRAY DRIFT IS THE RESPONSIBILITY OF THE APPLICATOR.
- CSI 15-114 Azoxystrobin may demonstrate some phytotoxic effects when mixed with products that are
 formulated as ECs. These effects are enhanced if applications are made under cool, cloudy conditions and
 these conditions remain for several days following application. In addition, adjuvants that contain some form
 of silicone have also contributed to phytotoxicity.

PRODUCT USE INSTRUCTIONS

Application: Thorough coverage is necessary to provide good disease control. Make no more spray solution than is needed for application. Avoid spray overlap, as crop injury may occur.

Adjuvants: When an adjuvant is to be used with this product, the use of an adjuvant that meets the standards of the Council of Producers and Distributors of Agrotechnology (CPDA) adjuvant certification is recommended.

Efficacy: Under certain conditions conducive to extended infection periods, use another registered fungicide for additional applications if maximum amount of **CSI 15-114 Azoxystrobin** has been used. If resistant isolates to Group 11 fungicides are present, efficacy can be reduced for certain diseases. The higher rates in the rate range and/or shorter spray intervals may be required under conditions of heavy infection pressure, with highly susceptible varieties, or when environmental conditions are conducive to disease.

INTEGRATED PEST (DISEASE) MANAGEMENT

CSI 15-114 Azoxystrobin should be integrated into an overall disease and pest management strategy whenever the use of a fungicide is required. Cultural practices known to reduce disease development should be followed. This should include selection of varieties with disease tolerance, removal of plant debris in which inoculum overwinters, and proper timing and placement of irrigation. Consult your local agricultural authorities for additional IPM strategies established for your area. **CSI 15-114 Azoxystrobin** may be used in State Agricultural Extension advisory (disease forecasting) programs which recommend application timing based on environmental factors favorable for disease development.

Crop Tolerance: Plant tolerance has been found to be acceptable for all crops on the label, however, not all possible tank-mix combinations have been tested under all conditions. When possible, it is recommended to test the combinations on a small portion of the crop to ensure that a phytotoxic response will not occur as a result of application. See Product Use Precautions for apple phytotoxicity information.

RESISTANCE MANAGEMENT

For resistance management, CSI 15-114 Azoxystrobin contains a Group 11 fungicide. Any fungal population may contain individuals naturally resistant to CSI 15-114 Azoxystrobin and other Group 11 fungicides. A gradual or total loss of pest control may occur over time if these fungicides are used repeatedly in the same fields. Appropriate resistance-management strategies should be followed.

To delay fungicide resistance, take one or more of the following steps:

- Rotate the use of CSI 15-114 Azoxystrobin or other Group 11 fungicides within a growing season sequence with different groups that control the same pathogens.
- Use tank mixtures with fungicides from a different group that are equally effective on the target pest when such use is permitted. Use at least the minimum application rate as labeled by the manufacturer.
- Adopt an integrated disease management program for fungicide use that includes scouting, uses
 historical information related to pesticide use, and crop rotation, and which considers host plant
 resistance, impact of environmental conditions on disease development, disease thresholds, as well as
 cultural, biological and other chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide/bactericide applications. Note that using predictive models alone is not sufficient to manage resistance.
- Monitor treated fungal populations for resistance development.
- Contact your local extension specialist or certified crop advisor for any additional pesticide resistancemanagement and/or IPM recommendations for specific crops and pathogens.
- For further information or to report suspected resistance contact your local Control Solutions, Inc. representative. You can also contact your pesticide distributor or university extension specialist to report resistance.

SPRAY DRIFT MANAGEMENT

SPRAY DRIFT

Groundboom Applications:

- User must only apply with the release height recommended by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do not apply when wind speeds exceed 15 miles per hour at the application site.
- Do not apply during temperature inversions.

Aerial Applications:

- Do not release spray at a height greater than 10 ft. above the ground or crop canopy, unless a greater application height is necessary for pilot safety.
- Applicators are required to select nozzles that deliver Medium to coarse spray droplets in accordance with ASABE Standard S-572-1.1
- Do not apply when wind speeds exceed 15 mph at the application site. If the windspeed is greater than 10 mph, the boom length must be 65% or less of the wingspan for fixed wing aircraft and 75% or less of the rotor diameter for helicopters. Otherwise, the boom length must be 75% or less of the wingspan for fixed-wing aircraft and 90% or less of the rotor diameter for helicopters.
- Applicators must use ½ swath displacement upwind at the downwind edge of the field.
- Do not apply during temperature inversions.

Airblast Applications:

- Sprays must be directed into the canopy.
- Do not apply when wind speeds exceed 15 miles per hour at the applications site.
- User must turn off outward pointing nozzles at row ends and when spraying outer rows.
- Do not apply during temperature inversions.

SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT.
BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

Controlling Droplet Size – Ground Boom

- Volume Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher flow rate.
- Pressure Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
- Spray nozzle Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to reduce drift.

BOOM HEIGHT – Ground Boom: For ground equipment, the boom should remain level with the crop and have minimal bounce.

SHIELDED SPRAYERS: Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area. **TEMPERATURE AND HUMIDITY:** When making applications in hot and dry conditions, use larger droplets to

reduce effects of evaporation.

TEMPERATURE INVERSIONS: Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions.

WIND: Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

ATTENTION

CSI 15-114 Azoxystrobin is extremely phytotoxic to certain apple varieties. AVOID SPRAY DRIFT. Extreme care must be used to prevent injury to apple trees (and apple fruit). DO NOT spray **CSI 15-114 Azoxystrobin** where spray drift may reach apple trees.

DO NOT use spray equipment which has been previously used to apply **CSI 15-114 Azoxystrobin** to spray apple trees. Even trace amounts can cause unacceptable phytotoxicity to certain apple and crabapple varieties.

MIXING AND APPLICATION METHODS

Spray Equipment

CSI 15-114 Azoxystrobin may be applied with all types of spray equipment commonly used for making ground and aerial applications. Proper adjustments and calibration of spraying equipment to give good canopy penetration and coverage is essential for good disease control.

Nozzles

- Equip sprayers with nozzles that provide accurate and uniform application.
- Nozzles should be the same size and uniformly spaced across the boom.
- Calibrate sprayer before use.
- It is suggested that screens be used to protect the pump and to prevent nozzles from clogging.
- Screens placed on the suction side of the pump should be 16-mesh or coarser.
- Do not place a screen in the recirculation line.
- Use 50-mesh or coarser screens between the pump and boom, and where required, at the nozzles.
- Check nozzle manufacturer's recommendations.

Pump

- Use a pump with capacity to:
 - 1. Maintain 35-40 psi at nozzles.
 - 2. Provide sufficient agitation in tank to keep mixture in suspension this requires recirculation of 10% of tank volume per minute.
 - 3. Use a jet agitator or liquid sparge tube for agitation.
 - 4. Do not air sparge.

For more information on spray equipment and calibration, consult sprayer manufacturers and state recommendations. For specific local directions and spray schedules, consult the current state agricultural recommendations.

Mixing Instructions

- **CSI 15-114 Azoxystrobin** is a suspension concentrate (SC) formulation.
- Prepare no more spray mixture than is required for the immediate operation.

- Thoroughly clean spray equipment before using this product.
- Agitate the spray solution before and during application.
- Rinse spray tank thoroughly with clean water after each day's use and dispose of pesticide rinsate by application to an already treated area.

CSI 15-114 Azoxystrobin Alone (No Tank Mix)

- Add 1/2 2/3 of the required amount of water to the spray or mixing tank.
- With the agitator running, add CSI 15-114 Azoxystrobin to the tank.
- Continue agitation while adding the remainder of the water.
- Begin application of the spray solution after **CSI 15-114 Azoxystrobin** has completely dispersed into the mix water
- Maintain agitation until all of the mixture has been sprayed.

CSI 15-114 Azoxystrobin + Tank Mixtures: **CSI 15-114 Azoxystrobin** is usually compatible with all tank-mix partners listed on this label. To determine the physical compatibility of **CSI 15-114 Azoxystrobin** with other products, use a jar test. Using a quart jar, add the proportionate amounts of the products to 1 qt. of water. Add wettable powders and water dispersible granular products first, then liquid flowables, and emulsifiable concentrates last. After thoroughly mixing, let stand for at least 5 minutes. If the combination remains mixed or can be remixed readily, it is physically compatible. Once compatibility has been proven, use the same procedure for adding required ingredients to the spray tank.

CSI 15-114 Azoxystrobin has demonstrated some phytotoxic effects when mixed with products that are formulated as emulsifiable concentrates (EC). These effects are enhanced if applications are made under cool, cloudy conditions and these conditions remain for several days following application. In addition, adjuvants that contain some form of silicone have also contributed to phytotoxicity.

It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the application restrictions, limitations and directions for use and precautionary statements of each product in the tank mixture.

Mixing in the Spray Tank

- Add 1/2 to 2/3 of the required amount of water to the spray or mixing tank.
- With the agitator running, add the tank-mix partner(s) into the tank in the same order as described above.
- Allow the material to completely dissolve and disperse into the mix water. Continue agitation while adding the remainder of the water and **CSI 15-114 Azoxystrobin** to the spray tank.
- Allow **CSI 15-114 Azoxystrobin** to completely disperse.
- Spray the mixture with the agitator running.

APPLICATION INSTRUCTIONS THROUGH IRRIGATION SYSTEMS (CHEMIGATION)

- Use only on crops for which chemigation is specified on this label.
- Apply this product only through center pivot, solid set, hand move, or moving wheel irrigation systems. Do not apply this product through any other type of irrigation system.
- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.
- Apply in 0.1-0.25 inches/acre. Excessive water may reduce efficacy.
- If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers, or other experts.
- Do not connect an irrigation system (including greenhouse systems) used forpesticide application to a public

- water system, unless the pesticide label-prescribed safety devices for public water systems are in place.
- A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Spray Preparation: Chemical tank and injector system should be thoroughly cleaned. Flush system with clean water.

Drip irrigation

CSI 15-114 Azoxystrobin may be applied through drip irrigation systems for soil borne disease control. The soil should have adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) should be delayed for at least 24 hours following drip application.

Sprinkler Irrigation:

- Apply this product through sprinkler irrigation systems including center pivot, lateral move, end tow, side [wheel] roll, traveler, big gun, solid set, or hand move irrigation systems.
- Do not apply this product through any other type of irrigation system except as specified on this label.
- Apply with center pivot or continuous-move equipment distributing ½ acre-inch or less during treatment.
- In general, use the least amount of water required for proper distribution and coverage.
- If stationary systems (solid set, handlines or wheel lines other than continuous-move) are used, this product should be injected into no more than the last 20-30 minutes of the set.
- Do not apply when winds are greater than 10-15 mph to avoid drift or wind skips.
- Do not apply when wind speed favors drift beyond the area intended for treatment.
- Plant injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform treated water.
- Thorough coverage of foliage is required for good control.
- Good agitation should be maintained during the entire application period.

If you have questions about calibration you should contact State Extension Service specialist, equipment manufacturers or other experts.

Operating Instructions

- 1. Do not apply when wind speed favors drift beyond the area intended for treatment.
- 2. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water-source contamination from backflow.
- 3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 4. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- 6. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 7. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump)

- effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- 8. Allow sufficient time for pesticide to be flushed through all lines and all nozzles before turning off irrigation water. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.
- 9. Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

Center Pivot Irrigation Equipment

Notes: (1) Use only with drive systems which provide uniform water distribution. (2) Do not use end guns when chemigating **CSI 15-114 Azoxystrobin** through center pivot systems because of non-uniform application.

- Determine the size of the area to be treated.
- Determine the time required to apply 1/8 to 1/2 inch of water over the area to be treated when the system and injection equipment are operated at normal pressures as specified by the equipment manufacturer.
- When applying CSI 15-114 Azoxystrobin through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution. Run the system at 80-95% of the manufacturer's rated capacity.
- Using water, determine the injection pump output when operated at normal line pressure.
- Determine the amount of **CSI 15-114 Azoxystrobin** required to treat the area covered by the irrigation system.
- Add the required amount of **CSI 15-114 Azoxystrobin** and sufficient water to meet the injection time requirements to the solution tank.
- Make sure the system is fully charged with water before starting injection of the **CSI 15-114 Azoxystrobin** solution. Time the injection to last at least as long as it takes to bring the system to full pressure.
- Maintain constant solution tank agitation during the injection period.
- Continue to operate the system until the CSI 15-114 Azoxystrobin solution has cleared the sprinkler head.

Solid Set, Hand Move, and Moving Wheel Irrigation Equipment

- Determine the acreage covered by the sprinklers.
- Fill injector solution tank with water and adjust flow rate to use the contents over a 20 to 30-minute interval. When applying **CSI 15-114 Azoxystrobin** through irrigation equipment use the lowest obtainable water volume while maintaining uniform distribution.
- Determine the amount of **CSI 15-114 Azoxystrobin** required to treat the area covered by the irrigation system.
- Add the required amount of **CSI 15-114 Azoxystrobin** into the same quantity of water used to calibrate the injection period.
- Operate the system at the same pressure and time interval established during the calibration.
- Stop injection equipment after treatment is completed. Continue to operate the system until the **CSI 15-114 Azoxystrobin** solution has cleared the last sprinkler head.

Specific Instructions for Public Water Systems

- 1. Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.
- 2. Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, back-flow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

- 3. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 4. The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- 5. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.
- 6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.
- 7. Do not apply when wind speed favors drift beyond the area intended for treatment.

TURF

(Including golf courses, lawns and landscape areas around residential, institutional, public, commercial and industrial buildings, parks, recreational areas and athletic fields)

Golf course turf (not for use in California). Commercial turf farms (not for use in California).

CSI 15-114 Azoxystrobin is recommended for control of anthracnose, brown patch, cool weather brown patch

(yellow patch), Fusarium patch, gray leaf spot, gray snow mold (Typhula blight), leafspot, melting out, necrotic ring spot, pink patch, pink snow mold, Pythium blight, Pythium root rot, red thread, Rhizoctonia large patch, southern blight, spring dead spot, summer patch, take-all patch, and Zoysia patch on golf courses, lawns and landscape areas around residential, institutional, public, commercial and industrial buildings, parks, recreational areas and athletic fields.

INTEGRATED PEST (DISEASE) MANAGEMENT: Sound turf management resulting in healthy, vigorous turf is the foundation of a good IPM program. Cultural practices such as proper choice of turf variety, nutrient management, proper cutting height, thatch management, and proper watering, drainage, and moisture stress management should be integrated with the use of fungicides to increase turf vigor and reduce the susceptibility to disease, Immunoassay detection kits and extension service diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

RESISTANCE MANAGEMENT: Some turf disease pathogens are known to have developed resistance to products used repeatedly for their control. **CSI 15-114 Azoxystrobin** should be applied in a tank mix or alternation program with other registered fungicides that have a different mode of action and to which pathogen resistance has not developed.

APPLICATION DIRECTIONS: **CSI 15-114 Azoxystrobin** should be applied prior to disease development. Mix **CSI 15-114 Azoxystrobin** with the required amount of water and apply as a dilute spray application in 2-4 gallons of water per 1000 square feet (87-174 gallons per acre). Repeat applications at specified intervals for as long as required. For spot treatments, use 0.4 fl. oz. **CSI 15-114 Azoxystrobin** per 1 to 2 gallons of water. Apply by ground only.

Specific Use Restrictions

- Do not apply more than two sequential **CSI 15-114 Azoxystrobin** applications for *Pythium* spp. Control
- For all other diseases when *Pythium* spp. is not present, do not apply more than three sequential applications of **CSI 15-114 Azoxystrobin**
- Do not apply more than 9.6 quarts' product/acre/year (7.1 fl. oz. product/1000 square feet/year)
- Do not apply more than 0.95 lbs. azoxystrobin (59 fl. oz. CSI 15-114 Azoxystrobin) per Acre when using a mechanically pressurized handwand; 1.35 fl.oz. CSI 15-114 Azoxystrobin per 1000 square feet.

RATE RANGES: Use the shortest specified application interval and/or use the higher specified rate when prolonged favorable disease conditions exist.

Dollar Spot:

CSI 15-114 Azoxystrobin does not control dollar spot. **CSI 15-114 Azoxystrobin** is compatible in tank mixes with many other fungicides that control dollar spot. Always tank mix **CSI 15-114 Azoxystrobin** with another fungicide that controls dollar spot when this disease is present.

Follow directions under TANK MIXES/COMPATIBILITY above.

DIRECTIONS FOR APPLICATION FOR TURF DISEASES

Target Diseases	Use Rate (fl. oz. product per 1000 sq. ft.)	Application Interval (days)	Remarks*
Anthracnose (Colletotrichum graminicola)	0.38 – 0.77	14-28	Apply when conditions are favorable for disease development.
Brown Patch (Rhizoctonia solani)	0.38 – 0.77	14-28	Apply when conditions are favorable for disease development.
Cool weather brown patch Yellow patch (Rhizoctonia cerealis)	0.77	28	Make one or two applications in fall or when conditions are favorable for disease development.
Fairy Ring (Lycoperdon spp., Agrocybe pediades, and Bovistra plumbea)	0.77	28	Apply as soon as possible after fairy ring symptoms develop. Apply only in 4 gallons water per 1000 square feet (174 gallons/acre). Add the recommended rate of a wetting agent to the final spray. Severely damaged or thin turf may require reseeding. Fairy ring symptoms may take 2 to 3 weeks to disappear following application. Reapplication after 28 days may be required in some cases.
Fusarium patch (Microdochium nivale)	0.38 – 0.77	14-28	Apply when conditions are favorable for disease development.
Gray Leaf Spot (Pyricularia grisea)	0.38 – 0.77	14-28	Begin applications before disease is present and continue applications while conditions are favorable for disease development.
Gray snow mold Typhula blight (Typhula incarnata, T. ishikariensis)	1.35	Single application	Make a single application of 1.35 fl. oz. or two applications of 0.77 fl. oz. spaced 14 days apart in late fall just before snow cover. Tank mixing with
	0.77	10-28	another snow mold fungicide may enhance control under severe disease pressure.
Leaf Rust Stem Rust Stripe Rust (Puccinia spp.)	0.38 – 0.77	14-28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Leafspot (Bipolaris sorokiniana)	0.38 – 0.77	14-21	Apply when conditions are favorable for disease development.
Melting out (Drechslera poae)	0.38 – 0.77	14-21	Apply when conditions are favorable for disease development.
Necrotic ring spot (Leptosphaeria korrae)	0.77	14-28	Apply when conditions are favorable for disease development.
Pink patch (Limonomyses roseipellis)	0.38 - 0.77	14-28	Apply when conditions are favorable for disease development.

Pink snow mold (<i>Microdochium nivale</i>)	1.35	Single application	Make a single application of 1.35 fl. oz. or two applications of 0.77 fl. oz. spaced 14 days apart in late fall just before snow cover. Tank mixing with
	0.77	14	another snow mold fungicide may enhance control under severe disease pressure.
Powdery Mildew (Erysiphe graminis)	0.38 – 0.77	14-28	Begin applications when conditions are favorable for disease infection, prior to disease symptom development.
Pythium blight Pythium root rot (Pythium aphanidermatum, Pythium spp.)	0.77	10-14	Begin applications before disease is present. During periods of prolonged favorable conditions, treat on the 10 day application interval. For use on newly seeded as well as established turf.
Red thread (<i>Laetisaria fuciformis</i>)	0.38 – 0.77	14-28	Apply when conditions are favorable for disease development.
Rhizoctonia large patch (Rhizoctonia solani)	0.38 - 0.77	14-28	Make one or two applications in fall or when conditions are favorable for disease development.
Southern blight (Sclerotium rolfsii)	0.38 – 0.77	14-28	Apply when conditions are favorable for disease development.
Spring dead spot (Leptosphaeria korrae) or (Gaeumannomyces graminis var. graminis) or (Ophiosphaerella herpotricha)	0.77	28	Make one or two applications in fall or when conditions are favorable for disease development.
Summer patch (Magnaporthe poae)	0.38 - 0.77	14-28	Apply when conditions are favorable for disease development.
Take-all patch (Gaeumannomyces graminis var. avenae)	0.77	28	Make two applications 28 days apart in the spring and two applications 28 days apart in the fall.
Zoysia patch (Rhizoctonia solani and/or Gaeumannomyces incrustana)	0.38 – 0.77	14-28	Make one or two applications in late fall before snow cover or when conditions are favorable for disease development. Do not apply on top of snow.

CSI 15-114 Azoxystrobin Rate Conversion Chart for Turf

1.35	67.5	45	33.75		

ORNAMENTALS

(Including container, bench, flat, plug, bed or field-grown ornamentals in greenhouses, shade-houses, outdoor nurseries, retail nurseries, and other landscape areas)

Not for use in California

CSI 15-114 Azoxystrobin is recommended for control of certain pathogens causing foliar, aerial, and root diseases, including leaf, tip, and flower blights, leaf spots, downy mildew, powdery mildew, anthracnose, and rusts of ornamental plants. **CSI 15-114 Azoxystrobin** may be used to control certain diseases of container, bench, flat, plug, bed or field-grown ornamentals in greenhouses, shade-houses, outdoor nurseries, retail nurseries, and other landscape areas.

INTEGRATED PEST (DISEASE) MANAGEMENT: **CSI 15-114 Azoxystrobin** should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, optimum plant populations, proper fertilization, winter and/or spring pruning, plant residue management and proper timing and placement of irrigation. Immunoassay detection kits and diagnostic services can assist in the early and accurate identification of causal organisms and corresponding selection of the proper fungicide when required.

RESISTANCE MANAGEMENT: Some ornamental disease pathogens are known to have developed resistance to fungicides used repeatedly for their control. **CSI 15-114 Azoxystrobin** should be applied in an alternation or tank mix program with other registered fungicides that have a different mode of action and to which pathogen resistance has not developed. A sound resistance management program would include blocks of three **CSI 15-114 Azoxystrobin** applications separated by blocks of two alternate fungicide applications. Do not alternate **CSI 15-114 Azoxystrobin** with other strobilurin fungicides.

APPLICATION DIRECTIONS: Apply **CSI 15-114 Azoxystrobin** as a broadcast or banded spray targeted at the foliage or crown of the plant. Apply to runoff in sufficient water to ensure complete coverage of the target plant. Good coverage and wetting of foliage is necessary for best control. Refer to the label for specific use directions for control of certain diseases. Repeat applications at specified intervals (plus alternations for resistance management) for as long as required. Applications may be made by ground only.

CSI 15-114 Azoxystrobin applications should begin prior to disease development and continue throughout the season at specified intervals following resistance management guidelines. CSI 15-114 Azoxystrobin works best

when used as part of a preventative disease management program.

Use only surfactants approved for ornamental plants in combination with **CSI 15-114 Azoxystrobin**. Do not use silicone based products with **CSI 15-114 Azoxystrobin** due to possible phytotoxicity. Always test tank mixes on a small group of representative plants prior to broad scale use.

Apply **CSI 15-114 Azoxystrobin** at use rates of 1.9 - 7.7 fl. oz./100 gallons (0.95 - 3.85 fl. oz./50 gallons) and every 7-28 days (or as otherwise specified for a specific plant or disease). The addition of a non-silicone based wettersticker at the recommended use rate may enhance coverage on hard-to-wet plant foliage.

Under most conditions and for most diseases, apply 3.85 - 7.7 fl. oz./100 gallons (1.9 - 3.85 fl. oz./50 gallons) on a 7-14-day interval.

Under light to moderate disease pressure, use the lower rates (1.9 - 3.85 fl. oz./100 gallons, or 0.95 - 1.9 fl. oz./50 gallons) on a 7-14-day interval or the higher rates (5.75 - 7.7 fl. oz./100 or 2.85 - 3.85 fl. oz./50 gallons) on a 14-28-day interval.

Under environmental conditions which promote severe disease development, use the higher rates (5.75 - 7.7 oz./100 gallons or 2.85 - 3.85 fl. oz./50 gallons) on a 7-14-day interval.

Use of **CSI 15-114 Azoxystrobin** as a "rescue" (late curative or eradicant) treatment may not always result in satisfactory disease control.

Specific Use Restrictions

• Do not make more than three (3) sequential applications of **CSI 15-114 Azoxystrobin** before alternating with a fungicide of a different mode of action.

Do not exceed 0.75 lbs. azoxystrobin per acre (47 fl. oz. CSI 15-114 Azxoystrobin) when applied by groundboom or chemigation.

- Do not exceed 600 gallons spray volume per acre for foliar applications. For drench and crown applications, do not exceed 2 pints' volume per square foot.
- Do not exceed 0.0025 lbs. azoxystrobin per gallon for handheld equipment applications to nursery ornamentals, greenhouse ornamentals, and landscaping (plants, flowers, trees).

In addition, do not tank mix **CSI 15-114 Azoxystrobin** with other fungicides, insecticides, herbicides, fertilizers, adjuvants, etc. unless local experience indicates that the tank mix is safe to ornamental plants.

DRENCH APPLICATION: **CSI 15-114 Azoxystrobin** may be applied to control soilborne, seedling, and crown diseases of production ornamentals (greenhouses, shadehouse, and container grown) as a preventative, drench treatment prior to infection. Good coverage of the pre-infection area (root zone, root ball, crown, etc.) is necessary for satisfactory control. **CSI 15-114 Azoxystrobin** may be drench applied to container grown ornamentals using 0.38 - 1.75 fl. oz./100 gallons of water. Apply 1-2 pints of the solution per square foot surface area on a 7-28 day interval. Apply drench prior to infection as healthy roots are necessary to optimize product uptake, systemic translocation and disease protection.

Caution should be taken before making application of **CSI 15-114 Azoxystrobin** as a drench to small bedding plants in the seedling/plug stage due to possible phytotoxicity. A limited quantity of plants should be tested prior to full-scale application.

DRIP IRRIGATION: **CSI 15-114 Azoxystrobin** may be applied through drip irrigation systems to potted ornamentals or to bedded, field grown ornamentals for soil-borne disease control. Apply 3.85 - 30.75 fl. oz. **CSI 15-114 Azoxystrobin** per acre as a preventative disease application. The soil or potting media should have adequate moisture capacity prior to drip application.

Terminate drip irrigation at fungicide depletion from the main feed supply tank or after 6 hours from start, whichever is shorter. For maximum efficacy, subsequent irrigation (water only) should be delayed for at least for 24 hours following drip application.

GENERAL ORNAMENTAL USE PRECAUTIONS

Do not apply **CSI 15-114 Azoxystrobin** to apple, crabapple or cherry trees (Flowering, Yoshina variety) due to possible phytotoxicity. Further, do not use spray equipment that has applied **CSI 15-114 Azoxystrobin** for use in these sensitive crops due to possible phytotoxicity from residue remaining in the sprayer.

CSI 15-114 Azoxystrobin may be applied to certain varieties of crabapple for control of apple scab. **CSI 15-114 Azoxystrobin** has been shown to be safer when applied to the species and varieties listed in Table 4. However, due to the large number of genera, species, and varieties of crabapple, it is impossible to test every one for tolerance to **CSI 15-114 Azoxystrobin**. The professional user should conduct small scale testing to insure plant safety prior to broad scale commercial use on plant genera and species not listed on this label.

TABLE 1: DISEASES CONTROLLED: When used in accordance with the label directions, **CSI 15-114 Azoxystrobin** will provide control of the following diseases of ornamental plants:

		Use Rates and Appl	ication Instructions

CSI 15-114 Azoxystrobin can be used safely on genera, species, or varieties of ornamental and nursery plants not specified on this label. The professional user should conduct small scale testing to insure plant safety prior to broad scale commercial use on plant genera and species not listed in this label.

Tolerant Ornamental Plants: **CSI 15-114 Azoxystrobin** has been found to be safe when applied to the plants listed in Tables 2, 3 and 4 when applied according to recommended application methods, rates, and timings.

TABLE 2: Tolerant Plants Listed by Botanical Name:

BOTANICAL NAME	COMMON NAME	DISEASES
Abelia spp.	Abelia	2
Ahiesiraseri	Fraser fir	1, 4
Abiesprocera	Noble Fir	1, 4
Acer palmatum	Japanese maple	2
Acer saccharum	Sugar maple	2
Ageratum spp.	Floss-Flower	3, 4
Ageratum spp.	Pussy's-Foot	3, 4
Aglaonema spp.	Chinese-evergreen	2, 4
Ajuga reptans	Bugle, Bugleweed	3
Antirrhinum spp.	Snap-Dragon	2i, 3, 4
Apheiandra spp.	Zebra-Plant	2
Artemisia spp.	Mugwort-Sagebrush	2

Artemisia spp.	Wormwood	2
Aster spp.	Aster, Starwort	4
Aucuba japonica	Japanese aucuba, Japanese laurel	7
Begonia spp. (except Rieger begonia)	Begonia	2, 3
Berberis thunbergii	Barberry	3, 4
Betula nigra	River birch	3, 4
Bougainvillea spp.	Bougainvillea	2
Brassaia actinophylia	Rubber-tree, Umbrella-tree	2, 7
Buddieia davidii	Buddleia, Butterfly-bush	2
Buxus sempervirens	Boxwood	2, 7a
Caladium spp.	Caladium	7
Camelia japonica	Camelia	2
Caryota urens	Sago Palm	2, 7
Catharanthus roseus	Vinca	2
Ceanothus sanguineus	Wild lilac	3
Ceanothus spp.	Ceanothus, California lilac, Snowball	3
Cedrus atlantica	Atlas cedar	2, 4
Cecirus spp.	White cedar	2, 4
Cercis occidentaiis	Western redbud	2
Chamaecyparis spp.	Cypress, Leyland cypress	1
Chamaecypahspisifera spp.	Sawara cypress	1
Chamaedora eipgans	Parlor palm	7
Chrysanthemum spp.	Chrysanthemums	2, 7c
Clethra alnifolia	Clethra, White alder	2
Cornus spp.	Dogwood, Pink Dogwood, Flowering Dogwood	2b, 3
Cornus florida	Dogwood	2b, 3
Cortaderia selloana	Pampas grass	3
Cotoneaster adpressus	Creeping cotoneaster	7
Cotoneaster horizontalis	Cotoneaster- variegated rockspray	7
Cyclamen spp.	Cyclamen	7c
Cyperus spp.	Cyperus	1
Delphinium spp.	Larkspur	2
Dianthus caryophyllus	Carnation	3, 4
Dianthus spp.	Pink	3, 4
Dieffenbachia spp.	Dumb Cane	2
Dietes iridiodes	African iris, Butterfly iris	4c, 4j
Digitalis spp.	Foxglove	2, 3
Epipremnum spp.	Pothos	2
Erica dareyensis	Heather	2
Euonymus alata	Dwarf winged euonymus	2
Euonymus alatus	Burning bush	2
Euonymus japonicus	Evergreen euonymus	2
Euphorbia spp.	Poinsettia	2a
Fatsia japonica	Japanese fatsia, Paper-plant	2
Ficus spp.	Fig	2
Forsythia viridissima	Forsythia	2
Gaillardia spp.	Blanket-Flower	2
Gardenia jasminoides	Gardenia	3

Geranium spp.	Cranesbill	5b
Gerbera jamesonii	Gerber daisy, Transvaal daisy	3
Hedera algeriensis	Algerian ivy	2
Hedera helix	English ivy	2
Hibiscus moscheutos	Hibiscus	2, 3
Hibiscus rosa-sinensis	Hibiscus	2, 3
Hibiscus syriacus	Rose of Sharon	2, 3
Hosta spp.	Hosta	2
Hydrangea macrophyila	French hydrangea	2, 3
Hydrangea spp.	Hydrangea	2, 3
Ilex spp.	Holly, Winterberry, Yaupon	3
Impatiens spp.*	Balsam, Impatiens*	2a, 7a
Iris xiphium	Iris (bulbous, Spanish, Dutch)	2e
Itea virginica	Virginia willow	3, 4
Juniperus procumbens	Juniper	1a, 4
Juniperus scopulorum	Juniper	1a, 4
Juniperus spp.	Juniper	1a, 4
Juniperus virginiana	Red cedar	1a, 4
Lagerstroemia indica	Crapemyrtle	2,3
Lauras nobilis	Laurel	3
Lilium spp.	Asiatic Lily	2
Liriope muscari	Lily-turf	2
Lobularia maritima	Sweet alyssum	7
Magnolia grandiflora	Southern magnolia	2
Magnolia soulangiana	Saucer magnolia	2
Magnolia spp.	Magnolia	2
Malus spp.	Crabapple (See Table 4 for variety list)	2i
Nandina domestica	Nandina	2
Nerium oleander	Oleander, Rose-bay	2
Pelargonium spp.	Geranium	3, 4, 5b
Permisetum alopecuroides	Grass	2
Peperomia spp.	Baby rubber-plant	2, 7
Petunia spp.	Petunia	6a
Phelans spp.	Dwarf pampas grass	3
Philodendron spp.	Philodendron	2j
Phlox spp.	Phlox	3
Phoenix daciylifera	Date palm	2, 7
Phoenix roebelenii	Roebelin's palm	2, 7
Photinia glabra	Red tip photinia	2, 3, 4
Picea abies	Norway spruce	1
Picea glauca	White spruce	1
Picea purtgens	Blue spruce	1
Pieris japonica	Japanese andromeda	2, 7
Pinus muhgo	Muhgo pine	1b, 4
Pinus nigra	Black pine	1b, 4
Pinus silvestris	Scotch pine	1, 4
Pinus spp.	Pine	1b, 4
Pinus strobus	Eastern white pine	1b, 4

TABLE 3: Tolerant Plants Listed by Common Name:

COMMON NAME	BOTANICAL NAME	
Abelia	Abelia spp.	
Andromeda, Japanese	Pieris japonica	
Arborvitae	Thujopsis spp.	
Aspen Trees	Populus spp.	
Aster	Aster spp.	
Aucuba, Japanese	Aucuba japonica	
Azalea, Glacier	Rhododendron spp.	
Azaleas	Rhododendron spp.	
Balsam	Impatiens spp.	
Barberry	Berberis thunbergii	
Begonia (except Rieger begonia)	Begonia spp.	
Birch, River	Betula nigra	
Black-Eyed-Susan	Rudbeckia hirta	
Blanket-Flower	Gailliardia spp.	
Bougainvillea	Bougainvillea spp.	
Boxwood	Buxus sempervirens	
Buddleia	Buddleia davidii	
Bugle	Ajuga reptans	
Bugleweed	Ajuga reptans	
Burning Bush	Euonyrnus alatus	
Butterfly Bush	Buddleia davidii	
Cactus, Holiday	Schlumbergera	
Caladium	Caladium spp.	
Camellia	Camellia japonica	
Carnation	Dianthus caryophyllus	
Ceanothus	Ceanothus spp.	
Cedar, Atlas	Cedrus atlantica	
Cedar, Red	Juniperus virginiana	
Cedar, Western Red	Thuja plicata	
Cedar, White	Cedrus spp.	
Cherry	Prunus pumila	
Christmas Tree	See Fraser fir, Scotch pine and Douglas fir	
Chrysanthemum	Chrysanthemum spp.	
Cinquefoil	Potentilla spp.	
Clethra	Clethra alnifolia	
Coleus	Plectranthus spp.	
Cotoneaster, Creeping	Cotoneaster adpressus	
Cotoneaster, Variegated Rockspray	Cotoneasier horizontalis	
Crabapple (See Table 4 for variety list)	Malus spp.	
Cranesbill	Geranium spp.	
Crapemyrtle	Lagerstroemia indica	
Cyclamen	Cyclamen spp.	
Cyperus	Cyperus spp.	
Cypress, Sawara	Chamaecyparis pisifera	
Cypress, Leyland	Chamaecypans spp.	

Daisy, Gerber	Gerbera jamesonii	
Daisy, Transvaal	Gerbera jamesonii	
Dogwood	Cornus spp.	
Dogwood	Cornus florida	
Dogwood, Pink	Cornus spp.	
Dumb-Cane	Dieffenbachia spp.	
Euonymus, Dwarf Winged	Euonymus alatus	
Euonymus, Evergreen	Euonymus japonicus	
Evergreen, Chinese	Aglaonema spp.	
Fatsia, Japanese	Fatsia japonica	
Fig	Ficus spp.	
Fir, Douglas	Pseudotsuga spp.	
Fir, Fraser	Abies fraseri	
Fir, Noble	Abies procera	
Floss-Flower	Ageratum spp.	
Forsythia	Forsythia viridissima	
Foxglove	Digitalis spp.	
Gardenia	Gardenia jasminoides	
Geranium	Pelargonium spp.	
Grass	Pennisetum alopecuroides	
Grass, Dwarf Pampas	Phalaris spp.	
Grass, Pampas	Cortaderia selloana	
Hawthorn, Indian	Rhaphiolepsis indica	
Heather	Erica dareyensis	
Hemlock	Tsuga spp.	
Hemlock, Western	Tsuga heterophylla	
Hibiscus	Hibiscus moscheutos	
Hibiscus	Hibiscus rosa-sinensis	
Holly	Ilex spp.	
Hosta	Hosta spp.	
House-Leek	Sempervivum spp.	
Hydrangea	Hydrangea spp.	
Hydrangea, French	Hydrangea macrophylla	
Impatiens*	Impatiens spp.*	
Iris (Bulbous, Spanish, Dutch)	Iris xiphium	
Iris, African	Dietes iridiodes	
Iris, Butterfly	Dietes iridiodes	
Ivy, Algerian	Hedera aigeriensis	
Ivy, English	Hedera helix	
Ivy, Swedish	Plectranthus spp.	
Juniper	Juniperus procumbens	
Juniper	Juniperus scopulorum	
Juniper	Juniperus spp.	
Larkspur	Delphinium spp.	
Laurel	Laurus nobilis	
Laurel, Australian	Pittosporum spp.	
Laurel, Japanese	Aucuba japonica	
Lilac, California	Ceanothus spp.	

Lilac, Wild	Ceanothus sanguineus	
Lily, Asiatic	Lilium spp.	
Lily, Peace	Spathiphylium fioribundium	
Lilyturf	Liriope muscari	
Live-Forever	Sempervivum spp.	
Magnolia	Magnolia spp.	
Magnolia, Saucer	Magnolia soulangiana	
Magnolia, Southern	Magnolia grandiflora	
Maple, Japanese	Acer palmatum	
Maple, Sugar	Acer saccharum	
Marigold	Tagetes spp.	
Mock-Orange	Pittosporum tobira	
Mugwort	Artemisia spp.	
Nandina	Nandina domestica	
Oak, Pin	Quercus palustris	
Oak, Red	Quercus falcata	
Oleander	Nerium oleander	
Orpine	Sedum spp.	
Palm, Date	Phoenix dactyfifera	
Palm, Parlor	Ohamaedora eiegans	
Palm, Queen	Syagnis romanzoffianum	
Palm, Roebelin's	Phoenix roebeienii	
Palm, Sago	Caiyota urens	
Pansy*	Viola spp.*	
Paper Plant	Fatsia japonica	
Pear, Bradford's	Pyrus calleryana	
Periwinkle	Vinca spp.	
Petunia	Petunia spp.	
Philodendron	Philodendron spp.	
Phlox	Phlox spp.	
Photinia, Red-Tip	Photinia glabra	
Pine	Pinus spp.	
Pine, Black	Pinus nigra	
Pine, Eastern White	Pinus strobus	
Pine, Muhgo	Pinus muhgo	
Pine, Scotch	Pinus sylvestris	
Pink	Dianthus spp.	
Plum, Flowering	Prunus spp.	
Plum, Purple-Leaf	Prunus spp.	
Poinsettia	Euphorbia spp.	
Poplar	Populus trichocarpa	
Pothos	Epipremnum spp.	
Primrose	Primula spp.	
Pussy's-Foot	Ageratum spp.	
Redbud, Western	Cercis occidentalis	
Rhododendron	Rhododendron spp.	
Ribbon-Grass	Setaria spp.	
Rose of Sharon	Hibiscus syriacus	
	1	

Rose	Rosa spp.	
Rosebay	Nerium oleander	
Rosemary (Prostrate)	Rosmarinus spp.	
Rubber-Plant, Baby	Peperomia spp.	
Rubber Tree	Brassaia actinophylla	
Sage	Salvia spp.	
Sagebrush	Artemisia spp.	
Snapdragon	Antirrhinum spp.	
Snowball	Ceanothus spp.	
Spirea	Spirea bumalda	
Spirea	Spirea japonica	
Spruce, Blue	Picea pungens	
Spruce, Norway	Picea abies	
Spruce, White	Picea glauca	
Starwort	Aster spp.	
Stonecrop	Sedum spp.	
Sweet Alyssum	Lobularia maritima	
Thyme, Creeping	Thymus serpyllum	
Umbrella-Tree	Brassaia actinophylia	
Verbena	Verbena spp.	
Vervain	Verbena spp.	
Viburnum	Viburnum spp.	
Vinca	Catharanthus roseus	
Viola	Viola spp.	
White Alder	Ciethora spp.	
Weigela, Pink	Weigeia florida	
Willow, Virginia	Itea virginica	
Winterberry	<i>Ilex</i> spp.	
Wormwood	Artemisia spp.	
Yaupon	<i>Ilex</i> spp.	
Yew, Spreading	Taxus baccata	
Yucca	Yucca spp.	
Zebra-Plant	Aphelandra spp.	
Zinnia	Zinnia spp.	

^{*}Do not exceed 3.85 fl. oz./100 gallons on these species.

TABLE 4: Tolerant Varieties of Crabapple Species (Genus *Malus*) Tolerant Varieties of Malus

Arkansas Black	Eleyi	Mary Potter	seiboldii
atrosanguinea	Enterprise	Molten Lava	Selkirk
baccafa	Evereste	New Centennial	Sentinel
baccata var. jackii	Eyeiynn	Ormiston Roy	Silver Moon
baccata var. mandshurica	floribunda	Pink Satin	Siiverdrift
Callaway	Gloriosa	Prairie Maid	Sinai Fire
Candymint Sargent	Golden Delicious	Prairifire	spectablis
Christmas Holly	Golden Raindrops	Profusion	Sugar Tyme
coronaria	Нора	pumila	Van Eseltine
David	Indian Magic	Ralph Shay	White Angel

Dolgo	Island	Red Jade	Williams Pride
Donald Wyman	Katherine	Red Baron	Winter Gold
Dorothea	Lancelot	Sargent	Yellow Delicious
Doubloons	Louisa	sargentii	zumi Calocarpa

TABLE 5: Intolerant Plants (Do not apply **CSI 15-114 Azoxystrobin** to these species or varieties)

COMMON NAME	BOTANICAL NAME
Apple	Malus domestica
Crabapple - Flame variety	Malus spp.
Crabapple - Brandywine variety	Malus spp.
Crabapple - Novamac variety	Malus spp.
Cherry, Flowering - Yoshina variety	Prunus yedoensis
Leatherleaf Fern and Other Ferns for cut foliage	Rumohra adianformis and other species for cut foliage
Privet	Ligustrum spp.

CONIFERS INCLUDING CHRISTMAS TREES, COMMERCIAL PRODUCTION ROSES Not for use in California

CSI 15-114 Azoxystrobin may be used to control certain diseases on conifers in production (indoor and outdoor) and landscape situations.

Do not exceed 0.00125 lbs. azoxystrobin per gallon for handheld equipment applications to Christmas tree farms or 0.0025 lbs. azoxystrobin per gallon for handheld equipment applications to nursery ornamentals.

Do not exceed 0.75 lbs. azoxystrobin per acre (47 fl. oz. CSI 15-114 Azxoystrobin) when applied by groundboom or chemigation to field grown or nursery ornamentals.

Please see the Ornamental Section above for more detailed directions for use in landscape situations.

Сгор	Target Diseases	Use Rate fl. oz. product/Acre (lb a.i./A)	Application Instructions and Restrictions
Conifers including	Diplodia tip blight	6.1 - 15.3	Integrated Pest (Disease)
Christmas Trees	(Diplodia pinea) Lophodermium Needlecast (Lophodermium pinastri) Swiss Needlecast (Phaeocrytopus gaumannlf)	(0.10 - 0.25)	Management: CSI 15-114 Azoxystrobin should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance and removal of plant debris in which inoculum may overwinter.
			Resistance Management: Do not apply more than four sequential applications of CSI 15-114 Azoxystrobin before alternating with a fungicide that is not in Group

			11. Do not make more than eight
			applications of CSI 15-114
			Azoxystrobin per acre per year.
			Application Directions: CSI 15-114
			Azoxystrobin applications should
			begin prior to disease development
			and continue throughout the season
			at 7-21 day intervals following the
			resistance management guidelines. Applications may be made by
			ground, air or chemigation. An
			adjuvant may be added at
			recommended rates.
Roses	Downy Mildew	3.0 - 15.3	Integrated Pest (Disease)
	(Peronospora sparsa)	(0.05 - 0.25)	Management: CSI 15-114
(Commercial Rose	Powdery Mildew		Azoxystrobin should be integrated
Production)	(Spherotheca pannosa)		into an overall disease management
	Rust		strategy that includes selection of
	(Phragmidium mucronatum,		varieties with disease tolerance,
	P. tuberculatum, and other Phragmidium spp.)		optimum plant populations, proper fertilization, winter and/or spring
	Septoria Leaf Spot		pruning, plant residue management
	(Septoria rosea)		and proper timing and placement of
	Alternaria Leaf Spot		irrigation.
	(Alternaria alternata)		
			Resistance Management: Do not
			make more than four sequential
			application of CSI 15-114
			Azoxystrobin before alternating
			with a fungicide that is not in Group
			11. Do not make more than eight
			applications per acre per year.
			Application Directions: CSI 15-114
			Azoxystrobin application should
			begin prior to disease development
			and continue throughout the season
			on 7-21 day intervals following the
			resistance management guidelines.
			Applications may be made by
			ground, air or chemigation. An
			adjuvant may be added at recommended rates.
			recommended rates.
			Plant Safety: CSI 15-114
			Azoxystrobin has been shown to be
			safe when applied to roses.
			However, all varieties of roses have
			not been evaluated for safety. Small

	scale variety safety testing must be conducted to insure plant safety prior to large scale application, in addition, do not tank mix CSI 15-114 Azoxystrobin with other fungicides, insecticides, herbicides, fertilizer, etc. unless local experience indicates that the tank mix is safe to
	roses.

Specific Use Restrictions: Do not apply more than 123 fl. oz. of product/acre/year (2.0 lb. a.i./A).

STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

PESTICIDE STORAGE: Store in original containers only. Keep container closed when not in use. Do not store near food or feed. In case of spill on floor or paved surfaces, mop and remove to chemical waste storage area until proper disposal can be made if product cannot be used according to the label.

PESTICIDE DISPOSAL: Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative of the nearest EPA Regional Office for guidance.

CONTAINER DISPOSAL:

For Containers equal to or less than 5 Gallons: Nonrefillable container. Do not reuse or refill this container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container ¼ full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Offer for recycling if available. If recycling is not available: then dispose of container in a sanitary landfill or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

For Containers greater than 5 Gallons: Nonrefillable container. Do not reuse or refill this container. Clean container promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Offer for recycling if available. If recycling is not available: then dispose of container in a sanitary landfill or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

<u>For Bulk containers:</u> (Refillable Container) Refill this container with pesticides only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the re-filler. To clean the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or re—circulate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this procedure two more times.

LIMITATION OF WARRANTY AND LIABILITY

Read the entire direction for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once. By using this product, user or buyer accepts the following **CONDITIONS**, **DISCLAIMER OF WARRANTIES**, and **LIMITATIONS OF LIABILITY**.

CONDITIONS: The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risk associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of Control Solutions, Inc. All such risks shall be assumed by the user or buyer.

DISCLAIMER OF WARRANTIES: To the extent consistent with applicable law, Control Solutions, Inc. makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of Control Solutions, Inc. is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, Control Solutions, Inc. disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

LIMITATIONS OF LIABILITY: To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at Control Solutions, Inc. election, the replacement of product.

[OPTIONAL MARKETING CLAIMS:]

- [Product Name] is a [broad-spectrum,] [preventative] fungicide with [systemic] [and] [curative] properties.
- [Product Name] [kills] [destroys] [eliminates] a [large] selection of [common] fungi in [turf] [turfgrass], [golf courses], [and] [residential landscapes].
- [Product Name] provides additional benefits due to positive effects on plant physiology
- [Product Name] benefits plant physiology
- [Product Name] may be applied [as a foliar spray in alternating spray programs], [or] [in tank mixes with other plant protection products]
- [Product Name] may be use as part of an integrated pest [disease] management strategy [IPM]
- [Product Name] targets these turf diseases: [Anthracnose,] [Brown Patch,] [Yellow Patch,] [Fairy Ring,] [Fusarium Patch,] [Gray Leaf Spot,] [Gray Snow Mold,] [Leaf Rust,] [Stem Rust,] [Strip Rust,] [Rust,] [Leaf Spot,] [Melting Out,] [Necrotic Ring Spot,] [Pink Patch,] [Pink Snow Mold,] [Powdery Mildew,] [Pythium Blight,] [Pythium Root Rot,] [Red Thread,] [Rhizoctonia Large Patch,] [Southern Blight,] [Spring Dead Spot,] [Summer Patch,] [Take-All Patch,] [Zoysia Patch,]
- [Product Name] is recommended for controlling [certain] pathogens of ornamental plants
- [Product Name] will provide control of the following diseases of ornamental plants: [Conifer Blights,] [Leaf Blights,] [Leaf Spots,] [Powdery Mildew,] [Rusts,] [Flower Blights,] [Shoot/Stem Diseases,] [Soilborne Diseases,]
- [Product Name] is tolerant to most common turfgrasses and ornamental plants.
