GENERAL INFORMATION

WEED IMPEDE II is a selective preemergence herbicide for the control of annual grasses and broadleaf weeds in ornamental trees, ornamental woody shrubs, ornamental groundcovers, roses, established flowers and vegetable gardens.

WEED IMPEDE II is a preemergence herbicide which provides a long-lasting control of annual grasses and broadleaf weeds (see following list). WEED IMPEDE II controls weeds by killing their seeds as they germinate. It does not control established weeds.

WEED IMPEDE II is recommended for use on a wide variety of vegetables, ornamental trees, ornamental groundcovers, shrubs and flowers.

GENERAL USE PRECAUTIONS

Applied according to directions and under normal growing conditions, WEED IMPEDE II will not harm the treated plant. Over-application may result in plant injury or a soil residue. Uneven application of WEED IMPEDE II can result in erratic weed control or plant injury. Seedling disease, cold weather, deep planting, excessive moisture, high salt concentration or drought may weaken plant seedlings and increase the possibility of damage from WEED IMPEDE II. Under these conditions, delayed plant development or reduced yields may result.

NOTE: Staining may occur on certain materials. Wash WEED IMPEDE II solution into the soil with water immediately after application.

SURFACE APPLICATION AND WATER INCORPORATION DIRECTIONS

Mix 3 fluid ounces of WEED IMPEDE II in 2 gallons of water and apply to 1,000 square feet. Start with a clean spray tank. Fill sprayer 1/2 full with clean water, then add WEED IMPEDE II. Finish filling sprayer with water and shake occasionally to keep solution mixed. Spray solution directly onto soil. Follow application within 24 hours with 1/2 inch rain or its equivalent in sprinkler irrigation or poor weed control will result.
