SPECIAL INSTRUCTIONS

Larvae must ingest JAVELIN[®] ECB to be affected. Application timing should coincide with the presence of early growth stages of the worms (first to third instar). Note that control decreases as worm size increases and worms begin entering the plant. Recommended timing of application is dependent on regionally established economic thresholds and such information should be obtained by consulting your local Experimental Station Specialist or Agricultural Extension Agent. An effective scouting program is necessary for maximizing worm control with JAVELIN[®] ECB. A follow-up application may be necessary if there is an extended moth flight and egg-laying period....Best results will be achieved when moisture from dew, rainfall or irrigation shortly follows application.
