

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

GENERAL DIRECTIONS: Place bait in dry containers along walls, by gnawed openings, in or beside burrows, in corners and concealed places, between floors and walls, or in locations where rodents or their signs have been observed. Replace stale or moldy bait with fresh bait. Where a continuous source of infestation is present, permanent bait stations should be established and bait replenished as needed.

NORWAY RATS, ROOF RATS

Place 4 to 16 ounces of bait per placement. Assure an uninterrupted supply of bait for a period of not less than 10 days and continue baiting until all signs of feeding have stopped.

HOUSE MICE

Tablespoon amounts (¼ to ½ ounce) of bait at 8-12 foot intervals. An uninterrupted supply of bait should be maintained for at least 15 days.

CAUTION

Protect children, pets and domestic animals from bait. If swallowed by humans, domestic animals or pets this material may reduce the clotting ability of the blood, and cause bleeding. In such case, intravenous and oral administration of vitamin K₁ combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood, and, upon repeated feedings, causes fatal hemorrhage in rats. It also contains an antibacterial agent, sulfaquinoxaline, which inhibits bacteria that produce vitamin K, an antidote for warfarin.

Treated baits must be placed in locations not accessible to children, pets, wildlife and domestic animals, or in tamper-proof bait boxes. Do not contaminate water by cleaning of equipment, or disposal of wastes.

DO NOT REUSE CONTAINER. DESTROY WHEN EMPTY

ABSOLUTELY GUARANTEED: If you are not entirely satisfied after using this package, return to dealer for full refund of purchase price.

ACCEPTED

APR 9 1980

Under the Federal Insecticide,
Fungicide, and Rodenticide Act,
