DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

H-2000 Algaecide is used to control algae, bacteria, and fungi in recirculating and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime, and other deposits. An initial slug dose of 2.9 to 7.3 fluid ounces of H-2000 Algaecide per 1000 gallons of water to provide a concentration of 24 to 60 parts per million of H-2000 Algaecide, based on the total water in the system, is recommended. Repeat initial dosage until control is evident.

Subsequent slug additions of 0.73 to 7.3 fluid ounces of H-2000 Algaecide per 1000 gallons of water (6 to 60 parts per million of H-2000 Algaecide) should be employed every 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the microbiological problem. Slug additions should be made to the sump of water cooling towers.

H-2000 Algaecide is used to control bacteria in industrial air-washing systems. Prior to its use, systems should be cleaned to remove bacterial slime and other deposits. An initial slug dose of 11.1 to 18.3 fluid ounces of H-2000 Algaecide per 1000 gallons of water is recommended. Repeat initial dosage until control is evident. Subsequent slug additions of 7.5 to 18.3 fluid ounces of H-2000 Algaecide per 1000 gallons of water should be employed every 1 to 5 days, or as needed. The frequency of addition depends upon the relative amount of bleedoff and the severity of the bacterial problem. Slug additions may be made to the sump or to the water trays of the airwash system.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

STORAGE: Do not store more than four drums high. Leaking or damaged drums should be moved to a safe place for disposal. Spills should be absorbed in sawdust or sand and disposed of in a sanitary manner closed when not in use.
