# SECURITY™ Purge Weed Killer

For St. Augustine Grass, Centipede Grass, and Dormant Bermuda Grass

### PRECAUTIONARY STATEMENTS HAZARDS TO HUMAN & DOMESTIC ANIMALS CAUTION

Harmful or fatal if swallowed. Do not get in eyes, on skin or on clothing. Avoid inhalation of vapors or spray mist. Do not contaminate feed or food.

### ENVIRONMENTAL HAZARDS

This pesticide is toxic to aquatic invertebrates. Do not apply directly to water or wetlands. Runoffs and drift from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not contaminate water by cleaning of equipment or disposal of wastes.

**Groundwater Precaution:** Atrazine leaches readily and accepted label rates have been found to result in contamination of water supplies by way of groundwater. Therefore users are advised to avoid use of atrazine in well drained soils, particularly in areas having high groundwater tables.

### DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

### GENERAL INFORMATION

SECURITY Purge Weed Killer controls Spurweed, Florida Betony, Annual Bluegrass and many other problem weeds in home lawns, ornamental and recreational turf areas.

SECURITY Purge is a flowable weed killer that should be mixed with water and applied uniformly to the lawn. SECURITY Purge may be applied with any pump-up or compressed air type sprayer or with a hose-on type sprayer. Shake well before using. SECURITY Purge will control both emerged weeds and weeds from seeds. Rain or watering within 2 to 3 days of application may decrease the effectiveness on emerged weeds. However, for control of weeds from seeds, rainfall or watering is necessary within 7 to 10 days after treatment.

**CAUTION:** Do not apply within the active root zone of desirable ornamental plants such as camelias, azaleas, boxwoods, etc. Do not plant any crop (flower or vegetable gardens) to treated areas for 18 months or injury may result. Do not apply to grass that has been subjected to stress conditions such as drought, excessive moisture, winter injury, insects, diseases, nutrient imbalance or chemical injury. Do not apply when temperatures are expected to exceed 90 degrees F. Do not apply in combination with liquid fertilizer or other pesticides unless experience indicates that they are compatible. Do not apply to plant species not listed on the label.

### WEEDS CONTROLLED OR SUPPRESSED

Annual Bluegrass (Poa Annual), Chickweed (Common and mouseear), Crabgrass, Cransbil, Cudweed, Dichondra, Florida Betony, Henbit, Knotweed, Lespedeza, Moneywort, Mustards, Narrowleaf Vetch, Parsley-Plant, Sandspur, Smutgrass, Spurweed, Swinecrest, Woodsorrel and various annual clevers.

### TIMING OF APPLICATION

The timing of applications to achieve control may vary quite a bit with different weed species. The following application times are suggested for certain problem weeds. Spurweed: The best control of Spurweed can be obtained by applying SECURITY Purge when spurweed has emerged (December and January) Florida Betony: This weed emerges in the fall, so an application of SECURITY Purge in mid to late October followed with a second application in mid to late February would give the best control. Dichondra, Moneywort: The best control for these weeds can be obtained by applying SECURITY Purge in early April followed with a second application in July. Do not apply to growing Bermudagrass. Applications for Spurweed or Florida Betony generally will give control or suppression of the other weeds listed. However, as a general rule SECURITY Purge will give the best control when applied to young tender weeds or just prior to weed emergence.

### ST. AUGUSTINE AND CENTIPEDE GRASSES

SECURITY Purge may be applied to established St. Augustine and Centipede grasses during both the dormant and the growing season. Best results are usually obtained in the early spring or dormant periods when weeds are small or have not emerged. Follow rates below.

### DORMANT BERMUDA GRASS

SECURITY Purge may be applied to Bermuda grass while it is in a dormant state. Applications made to Bermuda grass after it has begun to green up may cause injury. Follow rates below.

### RATE OF APPLICATION

Determine the total area to be sprayed and base rate of application on the chart below. Avoid overlapping spray pattern while treating. Shake contents well before mixing.

Area To Be Treated	Amount Of Purge	Suggested Amount of Water
500 sq. ft.	1 1/2 tablespoons	1 gallon
1,000 sq. ft.	3 tablespoons (1 1/2 oz.)	2 gallons
3,000 sq. ft.	4 1/2 ounces	6 gallons
5,450 sq. ft.	8 ounces	10 gallons
10,900 sq. ft. (1/4 acre)	1 pint	20 gallons

### STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal. Store pesticide in original container and place in a locked storage area. Do not reuse container. Rinse thoroughly and securely wrap original container in several layers of newspaper and discard in trash.
