N-LARGETM

Plant Growth Regulator Solution

ACTIVE INGREDIENT:

Gibberellic acid (GA ₃)		
OTHER INGREDIENT	S:	
	Total	100.0%

This product contains approximately 1.0 gram active ingredient per fluid ounce (30mL).

EPA Reg. No. 57538-18 EPA Est. Nos. 57538-TX-1, 57538-TX-2

KEEP OUT OF REACH OF CHILDREN CAUTION

1.0 FIRST AID

lf swallowed	Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
If in eyes	Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes; then continue rinsing eye. Call a poison control center or doctor for treatment advice.
If inhaled	Move person to fresh air. If person is not breathing, call 911 or an ambulance; then give artificial respiration, by mouth-to-mouth, if possible. Call a poison control center or doctor for further treat- ment advice.
lf on skin or clothing	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-539-5283 for emergency medical treatment information.

2.0 PRECAUTIONARY STATEMENTS

2.1 Hazards To Humans And Domestic Animals

Caution. Harmful if swallowed. Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

2.2 Personal Protective Equipment

Applicators and other handlers must wear: long-sleeved shirt and long pants. and shoes plus socks. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

2.3 User Safety Recommendations

Users should: Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

2.4 Environmental Hazards

Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater. Exposed treated seed may be hazardous to birds and other wildlife. Dispose of all excess treated seed and seed packaging by burial away from bodies of water.

2.5 Physical or Chemical Hazards

Flammable! Keep away from heat and open flame.

3.0 DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide application.

4.0 AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restrictedentry interval (REI) of 12 hours.

Exception: If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker protection Standard and that involves anything that has been treated such as plants, soil, or water is: Coveralls, waterproof gloves, and shoes plus socks.

5.0 NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses. Do not enter without appropriate protective clothing until sprays have dried.

> Manufactured by: Stoller Enterprises, Inc. 4100 W Sam Houston Pkwy N, Suite 100 Houston, Texas 77043 NET CONTENTS (____Gals.) (____L)

6.0 STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Keep containers tightly closed when not in use. Store away from any heat source.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Disposal: Do not reuse empty containers. Triple rinse or equivalent; then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

7.0 GENERAL INSTRUCTIONS FOR USE

Use only as directed. The label should be read thoroughly and understood before making applications. Do not apply this product through any type of irrigation system.

7.1 Application Instructions

N-LARGE[™] contains gibberellic acid, which is an extremely potent plant growth regulator. When applying plant growth regulators, deviations from the label directions in the rates, timings, water volumes, or the adoption of untested spray mixes, will result in undesirable effects. Always consult the State Extension Service Specialist in your area for the spray regimen best suited to your conditions.

- Do not apply to plants under pest, nutritional or water stress.
- When a range of rates is indicated, use the concentration and spray volume recommended locally by the State Extension Service Specialist.
- For optimum effectiveness, thorough spray coverage must be achieved. All parts of the plant or crop must receive the spray or desired results will not occur. Prepare solution concentrations by mixing the required amount of product with water in a clean, empty spray tank. Discard any unused spray material at the end of each day following local, state or Federal Law.
- For best results, the water pH must be around neutral and always below 8.5.
- N-LARGE[™] applications made under slow drying conditions (cool to warm temperatures, medium to high relative humidity and no wind) will increase absorption by the plant, thus optimizing effectiveness. Night-time applications are encouraged when day-time conditions are not conducive to slow drying conditions.
- Product persistence: N-LARGE[™] must be reapplied if significant rain occurs within 2 hours of application.
- Compatibility: Except when noted elsewhere, the N-LARGE[™] spray guidelines refer to the use of the product alone. The use of surfactants and other additives has been reported to be beneficial. Stoller Enterprises does not assume responsibility for unexpected results due to the tank mixing of N-LARGE[™] with other products.
- DO NOT apply using ULV application methods. For aerial applications, spray volumes must be greater than 2 gallons per acre (20 l/ha), 10 gallons per acre for tree crops (100 l/ha).
- No harvest interval is required for this product. Observe the 12-hr. REI.

8.0 SPRAY GUIDELINES FOR GRAPES

For all grapes, application shall be by ground sprayer. Apply as a concentrate or dilute spray in sufficient water volume to ensure thorough wetting. It is important to wet all flower clusters or berries thoroughly. For cultivar specific spray rates and timings, see accompanying tables.

8.1 SEEDLESS TABLE GRAPE CLUSTER STRETCH SPRAYS

CEUDIER DIRETCH DI MATD			
Objective/benefit	Application timing/recommendations		
For cluster elongation and looser cluster forms. To reduce costs of thinning, allow better air circulation to aid in the control of bunch rot, and increase light penetration to aid in sugar development.	Make one to three applications before bloom when flower clusters are 2 to 7 inches long.		
Crop/Cultivar	Rate (grams a.i./acre)		
Perlette Seedless	8-24		
Flame Seedless			
Thompson Seedless			
Raisin			
Other Seedless Grapes	No recommendations are available at this time		
BERRY THINNING SPRAYS			
Objective/benefit	Application timing/recommendations		
For decreased berry set, reduced hand- thinning costs, and hastened maturity.	Make one to four applications during bloom. Only 1-2 applications for "Other Seedless		

	after the first application	ation.

Grapes." When the bloom period is extended

subsequent sprays are to be made 1 to 7 days

9.0 SPRAY GUIDELINES FOR CITRUS

For citrus, apply in sprays of sufficient water volumes to ensure thorough fruit wetting. In most cases, this application will cause some drop of older mature leaves; this drop of older leaves is inconsequential. However, application to trees of low vigor or under stress (pest, nutritional, or water, etc.) will cause severe leaf and/or fruit drop. Do not apply in white wash sprays in which lime or other caustic material has produced a high pH in the spray tank. Applications of copper fungicides and/or oils within three weeks (before or after) the N-LARGE application will result in significant leaf drop and fruit drop.

ing capacity of timing is defined as that tart cherry trees stage when 3 to 5 terminal leaves have fully expanded, and reduce the occurrence of or, at least 1 to 3 inches of "blind" nodes. terminal shoot extension has Treatment will occurred. Use 4 to 18 grams cause bud differa.i./acre, depending on tree entiation, which is age and vigor (See Table apparent the year below). Apply as a concenafter application. trate or dilute spray in suffi-Therefore, cient water volume to ensure changes in shoot, thorough wetting. spur, and flower production will not be evident until two or three years after program initiation. Applications must be applied annually to ensure vegetative development and subsequent yield improvement year

after year. NOTE: Rates are based on expected normal tree vigor at various ages. Adjust rate according to tree vigor. If trees are vigorous, use lowest recommended rates. Lowest rates must also be used on trees that have been heavily pruned or hedged. Use higher rates for trees low in vigor and weak in shoot and spur production. Excessive application rates will increase vegetative growth at the expense of fruit production the following year. Applications will not improve growth of trees under stress conditions, such as nutritional, moisture. or pest. Best results will be obtained when combined with good cultural practices.

NOTE: Keep t cation. If hous Temperatures : Spinach (All States Except CA)	cccp informing noise temperatures at 90 P-50 P for 24 noise attending increase yields and cause poor stalk color. To facilitate harvest, increase yield and improve quality of fall and over-winter spinach. 6-10 Apply in a single spray 10 to 18 days before each anticipated harvest on fall or over-winter spinach. A) fall and over-winter spinach. ideally when daytime temperatures are 40°F to 70°F and during carly morning hours when dew is present on crop. Make applications in 10 to 50 gallons of water per acre by ground sprayer or in a minimum of 5 to 10 gallons of water per acre by air. When applied to promote growth of second cutting, wait until some regrowth has started before spraying. Maximum benefit is obtained when below normal temperatures predominate following appli-						
			cation and growth would				
			be otherwise slowed in				
NOTE: Since t	he promotion of bolting w	ill occur. d	a not apply after the mid				

NOTE: Since the promotion of bolting will occur, do not apply after the inidwinter period or if temperatures are expected to exceed 75°F within several days of application. Do not apply on spring planting.

13.0 SPRAY GUIDELINES FOR OTHER CROPS COTTON, HOPS, AND RICE

Crop/Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Recommendations
Cotton (All States Except CA)	To promote early plant growth and increase seedling vigor.	1-6	Apply as an in-furrow application to seed or as a foliar application from the cotyledon leaf stage through the 7 leaf/node stage. Up to three appli- cations are to be made as needed. To mix, fill the treatment tank with half the final tank unix vol- ume. Add the required amount of N-LARGE and mix thoroughly while adding water to the de- sired final volume. Com- patibility information regarding tank mixtures of N-LARGE with herbi- cides used in cotton is not available. Aerial applica- tion: Use a spray system capable of producing a uniform spray pattern of medium to fine spray droplets at 10 gallons per acre (GPA). Apply no less than 3 GPA of total spray volume. Ground application: For low pressure ground sprayers equipped with boom and flat fan noz- zles, apply 10 to 15 GPA spray volume. Dispose of unused spray mixture according to the label directions at the end of

			the day.
NOTE: Use hig	ner rates when tempera	tures will like	ly average 75°F or less
during the 14 day	ys following the applic	ation. Do not	apply more often than
necessary to achi	eve the desired height.	as over-dosaį	ge will result in excessive
growth. Do not a	ppty to cotton plants u	nder drought s	Stress.

14.0 SPRAY GUIDELINES FOR ORNAMENTALS, CUT FLOWERS

& TURFGRASS The following instructions are based on results with common cultivars. Differences in responsiveness will vary from one cultivar to another, or from one set of growing conditions to another, or from one cultural management system to another. Therefore, prior to widespread usage, test a small number of plants from each cultivar under a specific set of growing and cultural management conditions to verify desired efficacy.
