# KEEP OUT OF REACH OF CHILDREN **CAUTION**

	1.0 FIRST AID
If swallowed	Call a poison control center or doctor immediately for treatment advice.  Have person sip a glass of water if able to swallow.  Do not induce vomiting unless told to do so by the poison control center or doctor.  Do not give anything by mouth to an unconscious person.
If in eyes	Hold eye open and rinse slowly and gently with water for 15-20 minutes.  Remove contact lenses, if present, after the first 5 minutes; then continue rinsing eye.  Call a poison control center or doctor for treatment advice.
lf inhaled	Move person to fresh air.  If person is not breathing, call 911 or an ambulance; then give artificial respiration, by mouth-to-mouth, if possible.  Call a poison control center or doctor for further treatment advice.
If on skin or clothing	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-539-5283 for emergency medical treatment information.

# 2.0 PRECAUTIONARY STATEMENTS

### 2.1 Hazards To Humans And Domestic Animals

Caution. Harmful if inhaled, swallowed, or absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing spray mist. Wash thoroughly with soap and water after handling. Remove and wash contaminated clothing before reuse. Wear the appropriate Personal Protective Equipment (PPE).

#### 2.2 Personal Protective Equipment

Mixers, loaders, applicators and other handlers must wear:

- long-sleeved shirt and long pants,
- waterproof gloves, and
- shoes plus socks.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry

### 2.3 User Safety Recommendations

Users should: Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

### 2.4 Environmental Hazards

For terrestrial uses: Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater or rinsate. Exposed treated seed may be hazardous to birds and other wildlife. Dispose of all excess treated seed and seed packaging by burial away from bodies of water.

#### 2.5 Physical or Chemical Hazards

Flammable! Keep away from heat and open flame.

### 3.0 DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide application

### 4.0 AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural posticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restrictedentry interval (REI) of 4 hours unless wearing appropriate PPE.

Exception: If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker protection Standard and that involves anything that has been treated such as plants, soil, or water is: Coveralls, waterproof gloves, and shoes plus socks.

## 5.0 NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses. Do not enter without appropriate protective clothing until sprays have dried.

> Manufactured by: Stoller Enterprises, Inc. 4001 W Sam Houston Pkwy N, Suite 100 Houston, Texas 77043 Questions? Phone (713) 461-1493) NET CONTENTS (\_\_\_\_Gals.) (\_\_\_\_L)

#### 6.0 GENERAL INSTRUCTIONS FOR USE

Use only as directed. The label should be read thoroughly and understood before making applications. Do not apply this product through any type of irrigation system.

### 6.1 Application Instructions

N-LARGETM contains gibberellic acid, which is an extremely potent plant growth regulator. When applying plant growth regulators, deviations from the label directions in the rates, timings, water volumes, or the adoption of untested spray mixes, will result in undesirable effects. Always consult the State Extension Service Specialist in your area for the spray regimen best suited to your conditions.

- Do not apply to plants under pest, nutritional or water stress.
- When a range of rates is indicated, use the concentration and spray volume recommended locally by the State Extension Service Specialist.
- For optimum effectiveness, thorough spray coverage must be achieved. All parts of the plant or crop must receive the spray or desired results will not occur. Prepare solution concentrations by mixing the required amount of product with water in a clean, empty spray tank. Discard any unused spray material at the end of each day following local, state or Federal Law.
- For best results, the water pH must be around neutral and always below 8.5.
- N-LARGE<sup>18</sup> applications made under slow drying conditions (cool to warm temperatures, medium to high relative humidity and no wind) will increase absorption by the plant, thus optimizing effectiveness. Night-time applications are encouraged when day-time conditions are not conducive to slow drying conditions.
- Product persistence: N-LARGE<sup>™</sup> must be reapplied if significant rain occurs within 2 hours of application.
- Compatibility: Except when noted elsewhere, the N-LARGE<sup>™</sup> spray guidelines refer to the use of the product alone. The use of surfactants and other additives has been reported to be beneficial. Stoller Enterprises does not assume responsibility for unexpected results due to the tank mixing of N-LARGE<sup>™</sup> with other products. Conduct a jar test before tank mixing to ensure compatibility of N-LARGE with other pesticides or products if the tank mix combination has not been used previously. To test for compatibility, use a small jar and mix a small amount of spray, combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for spraying. Indications of incompatibility usually will appear within 5 to 15 minutes after mixing. To ensure maximum crop safety and product performance, follow all precautions and limitations on this label and labels of products used in the tank mixture with N-LARGE.
- DO NOT apply using ULV application methods. For aerial applications, spray volumes must be greater than 2 gallons per aere (20 l/ha).
   10 gallons per aere for tree crops (100 l/ha).
- No harvest interval is required for this product. Observe the 4-hr. REI.

### 7.0 SPRAY GUIDELINES FOR GRAPES

For all grapes, application shall be by ground sprayer. Apply as a concentrate or dilute spray in sufficient water volume to ensure thorough wetting. It is important to wet all flower clusters or berries thoroughly. For cultivar specific spray rates and timings, see accompanying tables.

# 7.1 SEEDLESS TABLE GRAPE

Objective/benefit	Application timing/instructions
For cluster elongation and looser cluster forms. To reduce costs of thinning, allow better air circulation to aid in the control of bunch rot, and increase light penetration to aid in sugar development.	Make one to three applications before bloom when flower clusters are 2 to 7 inches long.
Crop/Cultivar	Rate (grams a.i/acre)
Perlette Seedless Flame Seedless Thompson Seedless Raisin	8-24
Other Seedless Grapes	Not applicable.

BERRY THINNING SPRAYS	
Objective/benefit	Application timing/instructions
For decreased berry set, reduced hand- thinning costs, and hastened maturity.	Make one to four applications during bloom.  Only 1-2 applications for "Other Seedless
	Grapes." When the bloom period is extended,
	subsequent sprays are to be made 1 to 7 days

	after the first application.  Rate (grams a.i./acre)		
Crop/Cultivar			
Perlette Seedless	Not applicable		
Flame Seedless	3-16		
Thompson Seedless	8-20		
Raisin	3-12		
Other Seedless Grapes	0.5-12		

NOTE: Higher amounts or multiple applications will cause an excess of shot berries or overthinning, especially in young vines or vines with high vigor.

For "Other Seedless Grapes" use caution as some of the new cultivars are very responsive

For "Uther Seedless Grapes" use caution as some of the new cultivars are very responsive and will over-thin easily. A grower shall consult the local specialist before thinning cultivars with which he has no familiarity.

BUMP SPRAY - For Thompson Seedless

Objective/benefit	Application timing/instructions
To help initiate the beginning of the berry growth period.	Make one application of 16-24 grams a.i/acre during the period between the last thinning spray and the first sizing spray.

#### BERRY SIZING SPRAYS

Objective/benefit	Application timing/instructions		
For larger berries and larger clusters when used in conjunction with established girdling and thinning practices.	Make one to four ap when the average be get" diameter (see b subsequent sprays w perience in the vine occurring between s	plications beginning erry size reaches "tar- elow). Timing of the rill be dictated by ex- vard and temperatures	
Crop/Cultivar	Target Berry	Rate	

Crop/Cultivar	Target Berry Diameter*	Rate (grams a.i./acre)
Perlette Seedless	4-5 mm	32-128
Flame Seedless	6-9 mm	20-128
Thompson Seedless	3-5 mm	32-128
Raisin	3-5 mm	4-20
Other Seedless Grapes	3-14 mm	8-60
* Target average berry diame		

NOTE: In some growing regions and for some cultivars, high amounts of gibberellic acid will reduce fruitfulness (cluster counts) the following year. High amounts of gibberellic acid will also delay berry skin color development.

right anothers of globerenic acid will also delay being skin color development, sugars accumulation and overall maturation.

A grower shall consult the local specialist before sizing cultivars with which he has no familiarity.

Application timing/instructions

ť.

### 7.2 SEEDED GRAPE

# BERRY SIZING SPRAYS Objective/benefit

To increase berry size in listed cultivars; and also to reduce berry shrivel in Emperor.		Apprendict thangmist detions		
		Iso to reduce berry diameter range. Application is m		
Crop/Cultivar	Berry Diameter (mm)*	Whole vine spray. Rate in grams a.i./acre	Direct spray to the cluster only or dip the clusters. Rate in ppm's of a.i.	
Emperor	12-16			
Red Globe	12-18			
Calmeria	12-16	20	40-50	
Christmas Rose	1			
Rogue	12-16	i		
Queens	12-16			
•	12-15			

\* Predominant average berry diameter for this application.

NOTE: The whole vine application will reduce fruitfulness (cluster counts) the following year.

High amounts of gibberellic acid will also delay berry skin color development, sugars accumulation and overall maturation.

A grower shall consult the Stoller representative or local specialist before sizing cultivars with which he has no familiarity.

Objective/benefit	Application timing/instructions
To increase berry size.	Make one application 3-5 days after full bloom, but before shatter begins.
Crop/Cultivar	Rate (grams a.i./acre)
Black Corinth (Zante Currant)	1-12

### 8.0 SPRAY GUIDELINES FOR CITRUS

For citrus, apply in sprays of sufficient water volumes to ensure thorough fruit wetting. In most cases, this application will cause some drop of older mature leaves; this drop of older leaves is inconsequential. However, application to trees of low vigor or under stress (pest, nutritional, or water, etc.) will cause severe leaf and/or fruit drop. Do not apply in white wash sprays in which lime or other caustic material has produced a high pH in the spray tank. Applications of copper fungicides and/or oils within three weeks (before or after) the N-LARGE application will result in significant leaf drop and fruit drop.

# 8.1 CITRUS: FIELD APPLICATIONS

NOTE. When applied two years in a row	, an even larger difference in harvest pattern and
maturity will occur.	

				Т
Hybrids: associ Orlando, aging. Robinson, soften Minneola, increa	lay disorders ated with rind puffiness, and ing, and to se peel strength gerine hybrids.	20-40	Make one spray application two weeks prior to color break. Apply as a dilute spray.	

NOTE. Do not apply if early harvest is planned. Do not apply after coloring as pre-harvest rind staining may occur. Application during coloring causes variation in rind color development.

Grapefruit (All States Except CA)	To delay disorders associated with rind aging (e.g. puffiness.	16-48	Make one or two dilute spray applications in suffi- cient volume to ensure
1	softening, and orange		coverage. Do not exceed
	coloration) prevent		20 ppm a.i. in spray solu-
	preharvest drop of		tion.

	mature fruit, increase		EARLY: Make application
	peel strength, reduce		two weeks prior to color
	water loss during		break. Apply as a dilute
	storage, and produce		spray (Aug-Sept).
	a more orderly har-		AND/OR
	vesting pattern.	'	LATE: Make application
			after marketable color has
			developed (Oct-Dec).
LIOMB B			

NOTE: Do not spray groves that may be harvested early since fruit coloring will be delayed. Treated fruit will re-green if allowed to remain on the tree for extended periods. Application made after December, or when trees begin to break dormancy, will adversely affect new crop. Do not use concentrate sprays. Results will vary from season to season depending on environmental conditions. The delay in rind aging is greatest when spray is applied before color change. This spray timing produces the firmest rind possible.

Star Ruby Grapefruit (All States Except CA)  NOTE: Results will vary from season to sea	25-35	Make a single dilute appli- cation during the bloom period.
---	-------	---

NOTE: Results will vary from season to season depending on environmental conditions. Maintain a well-balanced fertilization and watering program.

Clementine	To increase fruit set	1-8	Make one or two applica-
Mandarin	and yield.	ŀ	tions from 50% petal fall
		•	up to 3 weeks after petai
			fall. Use a dilute spray
			with sufficient spray vol-
		1	ume for adequate coverage
			of tree canopy.

NOTE: The number of applications depends upon amount of desired fruit set. Generally, more fruit will be set by 2 applications, earlier applications, higher rates, and climatic conditions more favorable to set. Differences in the crop strain will also interact with the above factors to affect the degree of fruit set achieved. Reductions in final fruit size will occur as a result of excessive fruit set.

Tangerine	To increase fruit set and yield. The num-	8-30	Make one to two applica- tions during the bloom

## 9.0 SPRAY GUIDELINES FOR FRUIT CROPS

FRUIT CROPS

FRUIT CR	OPS		
Crop/Culti- var	Objective/ Benefit	Rate (grams a.i./	Application Timing/Instructions
Banana	To sumulate plant growth, and to over- come the effects of stress caused by insect, disease or adverse weather. These applications will also improve fruit size and quality and overall yield.	acre)	Apply by air or ground equipment once every 30 to 90 days throughout the year. Use sufficient water volume to achieve good coverage of the foliage. Make more frequent applications (monthly) during the 6 months prior to anticipated weather stress periods.
Вапала	To extend storage life.	1-2	Mix I to 2 grams/liter of water and spray directly on the banana fingers from 30 days before harvest until harvest. One to two applications are to be used.
Blueberry  Highbush: Coville, Jersey, Stanley. Earliblue, Weymouth, Walcott, Berkeley, Blueray, Bluecrop, 1316A, Concord, and others.	To improve fruit set.	40-80	Make a single application of 80 grams a.i. in 40 to 100 gallons of water/acre. The application shall be made at full bloom (when 75% of the flowers are fully open).  OR Make two applications at 40 grams a.i/acre in 40 to 100 gallons of water. Make the first application at full bloom, and the second one within 10-14 days of the first one. For Weymouth, application shall be delayed up to two weeks after bloom to increase size of "shot" berries.
Blueberry  Rabbiteye: Aliceblue, Beckyblue, Bonita, Brightwell, Climax, Delite, Tift- blue, Wood- ward, and others.	To improve fruit set.	40-80	Make a single application of 40 to 80 grams a.i. acre in 40 to 100 gallons of water per acre when most of the flowers are elongated but not yet open (bloom stage 5).  OR  Make two to four application 10 to 14 days apart starting at bloom Stage 5.  Spray 20 to 40 grams a.i. acre in 40 to 100 gallons of water per application.
Sweet Cherry	To produce larger, brighter colored, firmer fruit.	16-48	Apply a single spray when the fruit is translucent green to straw colored. Use sufficient water volume to ensure thorough wetting.
NOTE: Color do	velopment and harvest	date will be	slightly delayed.
Red Tart Cherry	To maintain and extend high fruiting capacity of tart cherry trees and reduce the occurrence of "blund" nodes.	4-18	Apply one spray 14 to 28 days after bloom. Optimum timing is defined as that stage when 3 to 5 terminal leaves have fully expanded, or, at least 1 to 3 inches of terminal shoot extension has accounted like 4 to 18 grams.

Treatment will

occurred. Use 4 to 18 grams

improvement year	· !
after year.	
NOTE: Rates are based on expected n	ormal tree vigor at various ages. Adjust

NOTE: Rates are based on expected normal tree vigor at various ages. Adjust rate according to tree vigor. If trees are vigorous, use fowest recommended rates. Lowest rates must also be used on trees that have been heavily pruned or hedged. Use higher rates for trees low in vigor and weak in shoot and spur production. Excessive application rates will increase vegetative growth at the expense of fruit production the following year. Applications will not improve growth of trees under stress conditions, such as nutritional, moisture, or pest. Best results will be obtained when combined with good cultural practices.

	temperatures predominate following application and
	growth would be otherwise
NOTE Signals and a Shaking dill	slowed in untreated spinach.

NOTE: Since the promotion of bolting will occur, do not apply after the mid-winter period or if temperatures are expected to exceed 75°F within several days of application. Do not apply on spring planting.

# 12.0 SPRAY GUIDELINES FOR OTHER CROPS COTTON, HOPS, AND RICE

Crop/Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Cotton (All States Except CA)	To promote early plant growth and increase seedling vigor.	1-6	Apply as an in-furrow application to seed or as a foliar application from the cotyledon leaf stage through the 7 leaf/node stage. Up to three applications are to be made as needed. To mix, fill the treatment tank with half the final tank mix volume. Add the required amount of N-LARGE and mix thoroughly while adding water to the desired final volume. Compatibility information regarding tank mixtures of N-LARGE with herbicides used in cotton is not available. Aerial application: Use a spray system capable of producing a uniform spray pattern of medium to fine spray droplets at 10 gallons per acre (GPA). Apply no less than 3 GPA of total spray volume. Ground application: For low pressure ground sprayers equipped with boom and flat fan nozzles, apply 10 to 15 GPA spray volume. Dispose of unused spray mixture according to the label directions at the end of the day.

NOTE: Use higher rates when temperatures will likely average 75°F or less during the 14 days following the application. Do not apply more often than necessary to achieve the desired height, as over-dosage will result in excessive growth. Do not apply to cotton plants under drought stress.

Northwestern U.S			
Rice Seed Treatment	For use as a seed treatment of both semi-dwarf and tall rice varieties to promote germination, emergence and final stand densities when planted at greater depths where soil moisture levels are more adequate for germination.	0.5-2.1	Use in 8 to 20 oz, water per 100 pounds of rice seed, N-LARGE is to be applied to dry seed with standard mist-treating equipment. Best results are obtained using a higher treatment volume (12 to 20 fl. oz. per 100 pounds of seed) to ensure the seed is completely and uniformly covered with N-LARGE. Fill the seed treatment tank with water to one-half the final tank mix volume. Add the required amount of N-LARGE mixing thoroughly while adding water and other seed treatment products to the desired final volume.

NOTE: Apply only to rice seed intended for drill seeded or dry broadcast systems. Do not apply to rice used in a 24-hour presoak prior to broadcast or to water used for the presoak. Do not use more than 2.1 grams a.i. per 100 pounds of seed. DO NOT USE TREATED SEED FOR FOOD, FEED, OR OIL PURPOSES.

An approved dye must be added to distinguish N-LARGE treated seed and prevent inadvertent use of food, feed or oil purposes. Seed commercially treated with this product must be labeled in accordance with all applicable requirements of the federal and state seed laws. N-LARGE is compatible with most commonly used fungicide seed treatments such as VITAVAX® and DITHANE®, standard dyes and sticker-binding agents. When preparing tank mixes, the user must ensure adequate physical compatibility and mixing characteristics.

maturity.			ļ			
		maturity,	j			

NOTE: N-LARGE application will result in a temporary lighter green foliage color due to accelerated growth rates.

Do not apply when rice is subject to drought stress conditions. N-LARGE may be tank mixed with most commonly used rice herbicides and fungicides. When N-LARGE is applied in tank mixes with Arrosolow, Riverside Propanil® 60 DF. Stam® 80 EDF or WHAM® EZ, plus a recommended adjuvant, the use of a surfactant is not necessary. Do not apply N-LARGE with products containing fenoxaprop-p-ethyl as the active ingredient. When preparing tank mixes, ensure

adequate physical compatibility and mixing characteristics. Refer to the paragraph on Compatibility under the APPLICATION INSTRUCTIONS section of this label for additional information.

N-LARGE applied between split-boot and 100% heading will increase paniele height of semi-dwarf rice. This will facilitate harvest efficiency in the field by allowing the rice grain to be cut above the leaf canopy at faster combine speeds and at reduced vegetative load. Grain quality and maturity will be advanced with the promotion of tiller paniele development. Heading applications to the first crop will also accelerate regrowth of second crop rice. This will result in earlier second crop maturity and maximize grain yield.

Hybrid Rice:
Seed Production

Seed Production

Apply N-Large to facilitate main culm and tiller panicle extension to increase pollination and harvest efficacy

Apply N-Large to 20-100

Make 1 to 5 applications at regular intervals during the heading period.

# 13.0 SPRAY GUIDELINES FOR ORNAMENTALS, CUT FLOWERS & TURFGRASS

The following instructions are based on results with common cultivars. Differences in responsiveness will vary from one cultivar to another, or from one set of growing conditions to another, or from one cultural management system to another. Therefore, prior to widespread usage, test a small number of plants from each cultivar under a specific set of growing and cultural management conditions to verify desired efficacy.

Rate

# 13.2 CUT FLOWERS

NOTE: Applying N-LARGE to ornamental plants grown for cut flowers will aid in promoting longer stems and increased flower yield, Gibberellic Acid is a potent plant growth regulator and overuse will result in undesirable effects.

Assess the effects of N-LARGE on a small number of plants prior to making large-scale applications.

Crop/ Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Aster (all states except Califor- ma) - Monte Carlo type, Novi- type and Belgi- type	To aid in pro- moting longer stems and m- creased flower yield.	50-100 ppm a.i.	Apply 1 to 3 applica- tions when plants are 2" to 6" tall. Make applica- tions at 2 to 3 week intervals.

California)			applications at 2 to 3 week intervals.
Solidaster (Soli- dago) (all states except Califor- nia)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Statice (Limo- nium) (all states except Califor- nia)	To promote carlier flowering and to increase flower yield.	10 ml of a 400-500 ppin a.i.	Apply as a foliar spray when plants are more than 10 inches in diame- ter (approximately 90 to 110 days after normal seeding time).

NOTE: Do not exceed specified rates. Do not apply repeated sprays. Accelerated flowering is influenced by extended photoperiod, adequate nutrition and reduced night temperature. Treatment with Gibberellins lessens the requirement for the cold requirement and/or the long photoneriod.

ment for the cold requirement and/or the long photoperiod.			
Statice (Limo- nium) (all states except Califor- nia)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Sunflower (Helianthus) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Sweet William (Dianthus) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall.  Make applications at 2 to 3 week intervals.

# 13.3 BEDDING PLANTS, ANNUAL AND PERENNIAL POTTED CROPS, FIELD GROWN ORNAMENTALS AND BULB CROPS

Crop/ Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Bedding Plants, Annual and Perennial Pot- ted Crops, Field Grown Orna- mentals and Bulb Crops (all states except California	To promote plant growth and/or overcome the effects of excessive use of a gibberellin inhibiting plant growth regulator.	1-25 ppm a.i.	Begin by applying a single foliar application of a 1 ppm a.i. solution unless experience dictates a higher rate is appropriate. If desired results are not achieved, a reapplication or increased rate will be necessary. Do not use more than 25 ppm a.i.

NOTE: Gibberellic Acid is a potent plant growth regulator and overuse will result in undesirable effects including stem clongation. Assess the effect of N-LARGE on a small number of plants prior to making large scale applications.

# 13.4 TURFGRASS

Crop/ Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Bermudagrass  Tidwarf, Tifgreen, and other cultivars (all states except California)	To initiate or maintain growth and prevent color change during periods of cold stress and light frosts.	10-25 grams a.i.	Apply 10 grams a.i. per acre weekly or 25 grams a.i. per acre biweekly in 25 to 100 gallons of water per acre.

NOTE: Application of N-LARGE to Bermudagrass grown in golf courses, parks and turf farms has been shown to initiate or maintain growth and prevent color change during periods of cold stress.

Do not exceed specific rates. Maintain adequate moisture and proper fertilization programs as indicated for the local area. Discontinue treatments if thinning is observed. Do not apply the high rate more frequently than every two weeks. More frequent mowing will be necessary. Do not use on dormant turf.

### 16.0 STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Keep containers tightly closed when not in use. Store away from any heat source.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Container Disposal: Do not reuse empty containers. Triple rinse or equivalent; then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

### 17.0 WARRANTY

To the fullest extent permitted by law, neither the manufacturers nor the seller make any warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use of this material when such use is contrary to label instructions. Read and follow the label directions carefully.
