KEEP OUT OF REACH OF CHILDREN **CAUTION**

	1.0 FIRST AID
If swal- lowed	Call a poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow.
	Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person.
If in eyes	Hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes; then continue rinsing eye. Call a poison control center or doctor for treatment advice.
If inhaled	Move person to fresh air. If person is not breathing, call 911 or an ambulance; then give artificial respiration, by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.
If on skin or clothing	Take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice.

trol center or doctor, or going for treatment. You may also contact 1-800-

539-5283 for emergency medical treatment information.

2.0 PRECAUTIONARY STATEMENTS

2.1 Hazards To Humans And Domestic Animals Caution. Harmful if inhaled, swallowed, or absorbed through skin. Causes moderate eye irritation. Avoid contact with skin, eyes or clothing. Avoid breathing spray mist. Wash thoroughly with soap and water after handling. Remove and wash contaminated clothing before reuse. Wear the appropriate

Personal Protective Equipment (PPE).

2.2 Personal Protective Equipment Mixers, loaders, applicators and other handlers must wear:

long-sleeved shirt and long pants.

waterproof gloves, and

shoes plus socks.

Follow manufacturer's instructions for cleaning maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

2.3 User Safety Recommendations

Users should: Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

2.4 Environmental Hazards

For terrestrial uses: Do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment washwater or rinsate. Exposed treated seed may be hazardous to birds and other wildlife. Dispose of all excess treated seed and seed packaging by burial away from bodies of water.

2.5 Physical or Chemical Hazards

Flammable! Keep away from heat and open flame.

3.0 DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide application.

4.0 AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

Do not enter or allow worker entry into treated areas during the restrictedentry interval (REI) of 4 hours unless wearing appropriate PPE.

Exception: If the product is soil-incorporated, the Worker Protection Standard, under certain circumstances, allows workers to enter the treated area if there will be no contact with anything that has been treated.

PPE required for early entry to treated areas that is permitted under the Worker protection Standard and that involves anything that has been treated such as plants, soil, or water is: Coveralls, waterproof gloves, and shoes plus socks.

5.0 NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard (WPS) for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses. Do not enter without appropriate protective clothing until sprays have dried.

NET CONTENTS (___Gals.) (___,L)

2 3-10

6.0 GENERAL INSTRUCTIONS FOR USE

Use only as directed. The label should be read thoroughly and understood before making applications. Do not apply this product through any type of irrigation system.

6.1 Application Instructions

N-LARGEIM contains gibberellic acid, which is an extremely potent plant growth regulator. When applying plant growth regulators, deviations from the label directions in the rates, timings, water volumes, or the adoption of untested spray mixes, will result in undesirable effects. Always consult the State Extension Service Specialist in your area for the spray regimen best suited to your conditions.

- Do not apply to plants under pest, nutritional or water stress.
- When a range of rates is indicated, use the concentration and spray volume recommended locally by the State Extension Service Specialist.
- For optimum effectiveness, thorough spray coverage must be achieved. All parts of the plant or crop must receive the spray or desired results will not occur. Prepare solution concentrations by mixing the required amount of product with water in a clean, empty spray tank. Discard any unused spray material at the end of each day following local, state or Federal Law.
- For best results, the water pH must be around neutral and always below 8.5.
- N-LARGE™ applications made under slow drying conditions (cool to warm temperatures, medium to high relative humidity and no wind) will increase absorption by the plant, thus optimizing effectiveness. Night-time applications are encouraged when day-time conditions are not conducive to slow drying conditions.
- Product persistence: N-LARGE™ must be reapplied if significant rain occurs within 2 hours of application.
- Compatibility: Except when noted elsewhere, the N-LARGETM spray guidelines refer to the use of the product alone. The use of surfactants and other additives has been reported to be beneficial. Stoller Enterprises does not assume responsibility for unexpected results due to the tank mixing of N-LARGETM with other products. Conduct a jar test before tank mixing to ensure compatibility of N-LARGE with other pesticides or products if the tank mix combination has not been used previously. To test for compatibility, use a small jar and mix a small amount of spray, combining all ingredients in the same ratio as the anticipated use. If any indications of physical incompatibility develop, do not use this mixture for spraying. Indications of incompatibility usually will appear within 5 to 15 minutes after mixing. To ensure maximum crop safety and product performance, follow all precautions and limitations on this label and labels of products used in the tank mixture with N-LARGE.
- DO NOT apply using ULV application methods. For aerial applications, spray volumes must be greater than 2 gallons per acre (20 l/ha), 10 gallons per acre for tree crops (100 l/ha).
- No harvest interval is required for this product. Observe the 4-hr. REI.

7.0 SPRAY GUIDELINES FOR GRAPES

For all grapes, application shall be by ground sprayer. Apply as a concentrate or dilute spray in sufficient water volume to ensure thorough wetting. It is important to wet all flower clusters or berries thoroughly. For cultivar specific apray rates and timings, see accompanying tables.

7.1 SEEDLESS TABLE GRAPE

Objective/benefit	Application timing/instructions
For cluster elongation and looser cluster forms. For maluce costs of thirming, allow better aftericulation to sid in the control of bunch rox, and increase light penetration to aid in augur development.	Make one to three applications before bloom when flower clusters are 2 to 7 inches long.
Crop/Cultivar	Rate (grams a.i./acre)
Polette Seedless Flame Seedless Thompson Seedless Raisin	8-24
Other Seedless Grapes	Not applicable.
BERRY THINNING SPRAYS	

MIRRY THINNING SPRAYS	
Objective/benefit	Application timing/instructions
For decreased berry set, reduced hand- thinning costs, and hastened maturity.	Make one to four applications during bloom. Only 1-2 applications for "Other Seedless Grapes" When the bloom period is extended,
	subsequent sprays are to be made 1 to 7 days

	after the first application
Crop/Cultivar	Rate (grams a.i./acre)
Perlette Seedless	Not applicable
Flame Seedless	3-16
Thompson Seedless	8-20
Raisin	3-12
Other Seedless Grapes	0.5-12

NOTE: Higher amounts or multiple applications will cause an excess of shot berries or overthirming, especially in young vines or vines with high vigor. For "Other Seedless Grapes" use caution as some of the new cultivars are very responsive and will over-thin easily. A grower shall consult the local specialist before thinning culti-

vars with which he has no familiarity
BUMP SPRAY - For Thompson Seedless

For larger berries and larger clusters when used in conjunction with established girdling and thinning practices.	when the average by get" diameter (see subsequent sprays perience in the vine occurring between	pplications beginning berry size reaches "tar- below). Timing of the will be dictated by ex- eyard and temperatures sprays. Sprays made om the first sizing spray
Crop/Cultivar	Target Berry Diameter*	Rate (grams a.i./acre)
Perlette Spediess	4-5 mm	32-128

Crop/Cultivar	Target Berry Diameter*	Rate (grams a.i./acre)
Perlette Seedless	4-5 mm	32-128
Flame Seedless	6-9 mm	20-128
Thompson Seedless	3-5 mm	32-128
Raisin_	3-5 mm	4-20
Other Seedless Grapes	3-14 mm	8-60
A Target mises on home diame	ton for the first andication	

* Target average berry diameter for the first application.

NOTE: In some growing regions and for some cultivars, high amounts of gibberellic acid will reduce fruitfulness (cluster counts) the following year. High amounts of gibberellic acid will also delay berry skin color development, sugars accumulation and overall maturation.

A grower shall consult the local specialist before sizing cultivars with which he has no familiarity.

7.2 SEEDED GRAPE

BERRY SIZING SPRAYS

Objective/benefit		Application timing/instructions		
To increase berry size in listed		Make one application during the indicated		
cultivars; and also to reduce		berry diameter range. Application is made		
berry shrivel in En	iperor.	as a whole vine sp directly to the clu	oray, or as a spray or dip	
Crop/Cultivar	Berry Diameter (mm)*	Whole vine Spray to the spray Rate in cluster only or dip the clusters. Rate in ppm of a.i.		
Emperor	12-16			
Red Globe	12-18	Ì		
Calmeria 12-16		20	40-50	
Christmas Rose	12-16			
Rogue	12-16	1		
Queens	12-15			

* Predominant average berry diameter for this application.

NOTE: The whole vine application will reduce fruitfulness (cluster counts) the following year.

High amounts of gibberellic acid will also delay berry skin color development, sugars accumulation and overall maturation.

A grower shall consult the Stoller representative or local specialist before sizing cultivars with which he has no familiarity.

Objective/benefit	Application timing/instructions	
To increase berry size.	Make one application 3-5 days after full bloom, but before shatter begins.	
Crop/Cultivar	Rate (grams a.i./acre)	
Black Corinth (Zante Currant)	1-12	

8.0 SPRAY GUIDELINES FOR CITRUS

For citrus, apply in sprays of sufficient water volumes to ensure thorough fruit wetting. In most cases, this application will cause some drop of older mature leaves; this drop of older leaves is inconsequential. However, application to trees of low vigor or under stress (pest, nutritional, or water, etc.) will cause severe leaf and/or fruit drop. Do not apply in white wash sprays in which lime or other caustic material has produced a high pH in the spray tank. Applications of copper fungicides and/or oils within three weeks (before or after) the N-LARGE application will result in significant leaf drop and fruit drop.

8.1 CITRUS: FIELD APPLICATIONS

	FIELD APPLICATIO		,
Crop/	Objective/	Rate	Application
Variety	Benefit	(grams	Timing/

California -	aging and		spray in August to October
and Arizona	softening.		to target crop of young
use only)	-		fruit.
			harvested early, as fruit coloring
will be delayed.	Do not apply from January t	hrough July,	as production will be reduced the
			re-greening of mature fruit is to
be expected in the target crop. After marketable color is achieved, treatment effects will be reduced the longer treated fruit remain on the tree.			
All round	, 	20-60	Notes a feet configuration
An iouna	To delay aging and	∠∪-6∪	Make a single application

All round Oranges (For Florida use only)	To delay aging and softening of the rind, and to reduce creasing and puffiness.	20-60	Make a single application in August to October to trees with a target crop of young fruit. The addition of pure organo-silicone type surfactant at 0.05% (6 fl. oz. in 100 gallons) is beneficial.
Lemon/ Lime	To increase the amount of small ripe fruit and produce a more desirable production pattern relative to market demand.	10-32	Make a single application when target crop is 1/2 to 3/4 full size, but still green.

NOTE: When applied two years in a row, an even larger difference in harvest pattern and matunty will occur.

Tangerine Hybrids: Orlando, Robinson, Minneola, Sunburst, and others	To delay disorders associated with rind aging, puffiness, and softening, and to increase peel strength of tangerine hybrids.	20-40	Make one spray applica- tion two weeks prior to color break. Apply as a dilute spray.
--	--	-------	--

NOTE: Do not apply if early harvest is planned. Do not apply after coloring as pre-harvest rind staining may occur. Application during coloring causes variation in rind color development.

1	To delay disorders associated with rind aging (e.g. puffiness, softening, and orange coloration) prevent preharvest drop of	16-48	Make one or two dilute spray applications in suffi- cient volume to ensure coverage. Do not exceed 20 ppm a.i. in spray solu- tion.
---	--	-------	--

mature fruit, increase peel strength, reduce	EARLY: Make application two weeks prior to color
water loss during storage, and produce a more orderly har-	break. Apply as a dilute spray (Aug-Sept). AND/OR
vesting pattern.	LATE: Make application after marketable color has developed (Oct-Dec).

NOTE: Do not spray groves that may be harvested early since fruit coloring will be delayed. Treated fruit will re-green if allowed to remain on the tree for extended periods. Application made after December, or when trees begin to break domnancy, will adversely affect new crop. Do not use concentrate sprays. Results will vary from season to season depending on environmental conditions. The delay in rind aging is greatest when spray is applied before color change. This spray tuning procuces the firmest rind possible.

Star Ruby Grapefruit (All States	To reduce early- season small fruit drop of Star Ruby	25-35	Make a single dilute appli- cation during the bloom period.
Except CA)	Variety thereby in- creasing vields.		
MOTE: Deculte		son donondia	a an anticommental conditions

NOTE: Results will vary from season to season depending on environmental conditions. Maintain a well-balanced fertilization and watering program

Clementine	To increase fruit set	1-8	Make one or two applica-
Mandarin	and yield.		tions from 50% petal fall
(All States	1		up to 3 weeks after petal
Except CA)			fall. Use a dilute spray
-			with sufficient spray vol-
	İ		ume for adequate coverage
			of tree canopy.

NOTE: The number of applications depends upon amount of desired fruit set. Generally, more fruit will be set by 2 applications, earlier applications, higher rates, and climatic conditions more favorable to set. Differences in the crop strain will also interact with the above factors to affect the degree of fruit set achieved. Reductions in final fruit size will occur as a result of excessive fruit set.

Tangerine Hybrids (Orlando, Robinson, Minneola, Sunburst, and others). (All States Except CA)	To increase fruit set and yield. The num- ber of applications depends on desired fruit set.	8-30	Make one to two applica- tions during the bloom period. Apply as a dilute spray.
	es will be reduced and color leaf drop will occur in trees		t slightly retarded. A slight in-
Navel and Valencia Orange (for Florida use only).	To enhance fruit set and yield.	15-25	Make a single application in Dec-Jan. Apply in 125- 175 gallons of water per acre with a pure organo- silicone type surfactant at 0.05% (6 fl. oz/100 gal- lons).
Amber- sweet Or- ange (For Florida use only).	To enhance fruit set and yield.	15-25	Make a single application in January. Apply in 125- 175 gallons of water per acre with a pure organo- silicone type surfactant at 0.05% (6 fl. oz/100 gal- ions).
Grapefruit (All States Except CA)	To enhance fruit set and yield.	15-25	Make a single application in Dec-Jan. Apply in 125- 175 gallons of water per acre, with a pure organo- silico At-Mype surfactant at 0.05% (6 fl. oz/100 gal-

8.2 CITRUS	: POSTHARVEST API	LICATIO	NS 3333	•
Lemon (All States Except CA)	To delay fruit senes- cence and prolong storage life. 	vegetative devel-	
	opment and sub-	
	sequent vield	
	improvement year	
	after year.	

NOTE: Rates are based on expected normal tree vigor at various ages. Adjust rate according to tree vigor. If trees are vigorous, use lowest recommended rates. Lowest rates must also be used on trees that have been heavily pruned or hedged. Use higher rates for trees low in vigor and weak in shoot and spur production. Excessive application rates will increase vegetative growth at the expense of fruit production the following year. Applications will not improve growth of trees under stress conditions, such as nutritional, moisture, or pest. Best results will be obtained when combined with good cultural practices.

VEGETABLE CROPS

Objective/

p-	1	2.000	1.1 Ph. 1.1
Variety	Benefit	(grams	Timing/
		a.i./acre)	Instructions
Artichoke	To accelerate maturity and shift harvest to an ear-lier date.	10-20	For perennials: Apply 1 to 3 applications at bud initiation stage. For annuals: Apply 1 to 4 applications at 2-week intervals, beginning at the fourth true leaf. Use sufficient water volume to ensure thorough wetting of the entire plant (leaves, stems and buds).
Carrots, Fresh and Processing (All States Except CA)	To delay leaf senescence. Maintaining vigorous foliage will reduce the incidence of infection by Alternaria dauci.	1-6	Make the first application 4-6 weeks after emergence using commercial ground or aerial equipment with spray concentrations of 20- 30 ppm. In severe disease situations or cool weather a second spray 14 days later will be required to achieve the desired amount of foliar recovery. Do not apply more than twice per crop.
NOTE Dibitio	ons of prester concentes	tion will incre	ase the rick of excessive ton

NOTE: Dilutions of greater concentration will increase the risk of excessive top growth, particularly with a second application.

Celery	To increase plant height and yield and to overcome stress due to cold weather conditions or saline soils, and obtain earlier maturity.	2.5-10	Make a single application one to four weeks prior to harvest. Use 25 to 50 gallons of water per acre by ground application or 5 to 10 gallons of water per acre for aerial application (except in California). Use lower concentrations if applying 3 to 4 weeks before harvest and higher concentrations within 1 to 2 weeks before harvest.

NOTE: Do not apply by air in California. Do not apply earlier than 4 weeks before harvest as bolting will occur.

Cucumber	To stimulate fruit set during periods of cool temperatures.	1-4	Make one application prior to bloom followed by two addi- tional applications at intervals of 10 to 14 days. Up to four applications are required. Use sufficient water volume for thorough coverage of exposed
			foliage.
NOTE: For ma	vimum henefits vines n	aust he in a	and condition, except for re-

NOTE: For maximum benefits, vines must be in good condition, except for reduced rate of growth due to cool temperatures.

Lettuce for Seed	To obtain uniform bolting and increase seed production.	11	Apply one to four applica- tions at two-week intervals, beginning at the fourth true
•			leaf. Use sufficient water volume to ensure thorough wetting.
Melon	To stimulate fruit set during periods of cool temperatures.	11	Make one application prior to bloom followed by two addi- tional applications at intervals of 10 to 14 days on canta- loupes and watermelons.

NOTE: For maximum benefits, vines must be in good condition, except for reduced rate of growth due to cool temperatures.

	Pepper (All States Ex- cept CA)	To promote plant growth.	1-3	Apply one to two sprays in 25 to 50 gallons of water per acre at two-week intervals.
ĺ	•		1	Begin sprays 2 weeks after
l			ł	transplanting.

NOTE: This use is recommended for acres with short growing season, or when low temperatures slow plant growth.

Pepper (All States Ex-	To increase fruit set	1-3	Apply one to two sprays in 25 to 50 gallons of water per
cept CA)	growth.		acre at weekly intervals dur-
1			ing the flowering period.

NOTE: The high rate is recommended for area; and/or varieties with pollination and/or fruit set problems.

Pepper (All	To increase fruit size.	1-3	Apply in 25 to 50 gallons of
States Ex-	•		water per acre at the begin-
cept CA)			ning of the picking period.
NOTE: Use the	e highest rate for plants w	ith heavy fi	ruit loads.
Potato seed	To stimulate uniform sprouting to aid in maximum production, more uniform development, fewer late maturing plants. and to break dormancy of newly harvested potatoes that have not had a full rest period.	0.2-1).4 (grams in 100 gal- lons)	Dip whole or cut seed pieces in a solution containing 0.2 to 0.4 grams a.i. in 100 gallons of water prior to planting.

NOTE: Under high soil temperatures use the minimum concentration for dormant seed. Do not treat rested seed pieces.

Rhubarb	To break dormancy on plants receiving insufficient chilling and to increase mar- ketable yield of forced rhubarb.	10-20 (grams in 10 gallons)	1) When the rest period is not completely bloken, make a single application of 2 fluid ounces (60 ml) of a solution containing 20 grams a.i. in 10 gallons of water to each cleaned crown. 2) When the test period is broken by cold weather, apply 2 fluid ounces (60 ml) of a solution containing 10 grams a.i. in 10 gallons of water to each cleated crown.

NOTE: Keep forcing house temperatures at 40°F-50°F for 24 hours after application. If house is warmer than 50°F, crowns must be covered with plastic. Temperatures above 50°F will lower yields and cause poor stalk color.

Spinach	To facilitate harvest.	6-10	Apply in a single spray 10 to
(All States	increase yield and	0.10	18 days before each antici-
Except CA)	improve quality of		pated harvest on fall or over-
	fall and over-winter		winter spinach, ideally when
	spinach.		daytime temperatures are

ł		ļ	growth has started before
			spraying Maximum benefit is
1		ĺ	obtained when below normal
			temperatures predominate
			following application and
			growth would be otherwise
NOTE OF)		slowed in untreated spinach.

NOTE: Since the promotion of bolting will occur, do not apply after the mid-winter period or if temperatures are expected to exceed 75°F within several days of application. Do not apply on spring planting.

Anglication

12.0 SPRAY GUIDELINES FOR OTHER CROPS COTTON, HOPS, AND RICE

CronVinciaty Objective

Crop/Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Cotton (All States Except CA)	To promote early plant growth and increase seedling vigor.	1-6	Apply as an in-furrow application to seed or as a foliar application from the cotyledon leaf stage through the 7 leaf/node stage. Up to three applications are to be made as needed. To mix, fill the treatment tank with half the final tank mix volume. Add the required amount of N-LARGE and mix thoroughly while adding water to the desired final volume. Compatibility information regarding tank mixtures of N-LARGE with herbicides used in cotton is not available. Aerial application: Use a spray system capable of producing a uniform spray pattern of medium to fine spray droplets at 10 gallons per acre (GPA). Apply no less then 3 GPA of total
•	•		less than 3 GPA of total spray volume. Ground application: For low pressure ground sprayers equipped with boom and flat fan noz-
	•		zles, apply 10 to 15 GPA spray volume. Dispose of unused spray mixture according to the label directions at the end of the day.

NOTE: Use higher rates when temperatures will likely average 75°F or less during the 14 days following the application. Do not apply more often than necessary to achieve the desired height, as over-dosage will result in excessive growth. Do not apply to cotton plants under drought stress.

Hops: Seeded and seedless Fuggle hops and similar varieties adapted to the Northwestern U.S	To increase fruit set and yield	4-6	Make a single application in 100-150 gallons of water per acre when vine growth is 5-8 feet in length.
Rice Seed Treatment	For use as a seed treatment of both semi-dwarf and tall rice varieties to promote germination, emergence and final stand densities when planted at greater depths where soil moisture levels are more adequate for germination.	0.5-2.1	Use in 8 to 20 oz. water per 100 pounds of rice seed. N-LARGE is to be applied to dry seed with standard mist-treating equipment. Best results are obtained using a higher treatment volume (12 to 20 fl. oz. per 100 pounds of seed) to ensure the seed is completely and uniformly covered with N-LARGE. Fill the seed treatment tank with water to one-half the final tank mix volume. Add the required amount of N-LARGE mixing thoroughly while adding water and other seed treatment products to the desired final volume.

NOTE: Apply only to rice seed intended for drill seeded or dry broadcast systems. Do not apply to rice used in a 24-hour presoak prior to broadcast or to water used for the presoak. Do not use more than 2.1 grams a.i. per 100 pounds of seed, DO NOT USE TREATED SEED FOR FOOD, FEED, OR OIL PURPOSES

An approved dye must be added to distinguish N-LARGE treated seed and prevent inadvertent use of food, feed or oil purposes. Seed commercially treated with this product must be labeled in accordance with all applicable requirements of the federal and state seed laws. N-LARGE is compatible with most commonly used fungicide seed treatments such as VITAVAX® and DITHANE®, standard dyes and sticker-binding agents. When preparing tank mixes, the user must

	ber of herbicide		
Ì	applications as	Ì	
	well as promote		
	earlier and more		
	uniform grain		
	maturity.		

NOTE: N-LARGE application will result in a temporary lighter green foliage color due to accelerated growth rates.

Do not apply when rice is subject to drought stress conditions. N-LARGE may be tank mixed with most commonly used rice herbicides and fungicides. When N-LARGE is applied in tank mixes with Arrosolo®, Riverside Propanil® 60 DF, Stam® 80 EDF or WHAM® EZ, plus a recommended adjuvant, the use of a surfactant is not necessary. Do not apply N-LARGE with products containing fenoxaprop-p-ethyl as the active ingredient. When preparing tank mixes, ensure adequate physical compatibility and mixing characteristics. Refer to the paragraph on Compatibility under the APPLICATION INSTRUCTIONS section of this label for additional information.

N-LARGE applied between split-boot and 100% heading will increase panicle height of semi-dwarf rice. This will facilitate harvest efficiency in the field by allowing the rice grain to be cut above the leaf canopy at faster combine speeds and at reduced vegetative load. Grain quality and maturity will be advanced with the promotion of tiller panicle development. Heading applications to the first crop will also accelerate regrowth of second crop rice. This will result in earlier second crop maturity and maximize grain yield.

Hybrid Rice: Seed Produc- tion (All States Except CA)	Apply N-Large to facilitate main culm and tiller panicle extension to increase polli-	20-100	Make 1 to 5 applications at regular intervals during the heading period.
	nation and harvest efficacy		

13.0 SPRAY GUIDELINES FOR ORNAMENTALS, CUT FLOWERS & TURFGRASS

The following instructions are based on results with common cultivars. Differences in responsiveness will vary from one cultivar to another, or from one set of growing conditions to another, or from one cultural management system to another. Therefore, prior to widespread usage, test a small number of plants from each cultivar under a specific set of growing and cultural management conditions to verify desired efficacy.

13.1 ORNAMENTALS

Crop/ Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Azalea (All states except California)	As a partial replace- ment of cold treat- ment to break flower dormancy.	250-500 ppm	Apply three sprays at weekly intervals after three to four weeks of chilling.

NOTE: Initiate treatment when plants are at Stage 5 of floral development (i.e. style elongated and open). A representative spray schedule consists of applications made at 3, 10 and 17 days after four weeks of chilling. Flowers will not develop properly if applied prior to Stage 5. Do not apply after flower buds show color. To ensure uniform flowering, apply thoroughly.

Azalea (All states except California)	To break dor- mancy on some cultivars (e.g. 'Gloria', 'Prize', and 'Redwing').	1000 ppm a.i.	Apply after three to four weeks of chilling
Azalea (All states except California)	As a complete substitution of cold treatment to break flower dormancy.	1000 ppm a.i.	Apply four to six sprays at weekly intervals. Plants must be at Stage 5 of floral development (style elongated and open) before first spray is applied.
NOTE Flowers	will not develop prope	ely if applied prior	to Stage 5 of floral

NOTE: Flowers will not develop properly if applied prior to Stage 5 of floral development. Do not apply after flower buds show color. To ensure uniform flowering, apply thoroughly

no worth, uppry	atoroughty.		
Azalea (All states except California) – Flower Bud Initiation	To inhibit flower bud initiation during vegetative growth.	100 –750 ppm a.i.	Approximately 2 to 3 weeks after each pinch, apply a single foliar application. After the first application, continue applying on a weekly basis for 1 to 2 weeks.
NOTE: Make a m	aximum of three app	lications.

Queen Anne's Lace (Ammi)(all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Safflower (Car- thamus) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Solidaster (Solidago) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Statice (Limo- nium) (all states except Califor- nia)	To promote earlier flowering and to increase flower yield.	10 ml of a 400-500 ppm a.i.	Apply as a foliar spray when plants are more than 10 inches in diame- ter (approximately 90 to 110 days after normal seeding time).

NOTE: Do not exceed specified rates. Do not apply repeated sprays. Accelerated flowering is influenced by extended photoperiod, adequate nutrition and reduced night temperature. Treatment with Gibberelline lessens the requirement for the cold requirement and/or the long specified.

ment for the cold r	equirement and/or th	e long photoperiod.	
Statice (Limo- nium) (all states except Califor- nia)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Sunflower (Hefianthus) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i.	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.
Sweet William (Dianthus) (all states except California)	To promote plant growth and longer stems.	50-100 ppm a.i	Apply solution as a foliar spray when plants are 4" to 8" tall. Make applications at 2 to 3 week intervals.

13.3 BEDDING PLANTS, ANNUAL AND PERENNIAL POTTED CROPS, FIELD GROWN ORNAMENTALS AND BULB CROPS

Crop/ Variety	Objective/ Benefit	Rate (grams a.i./acre)	Application Timing/ Instructions
Bedding Plants, Annual and Perennial Pot- ted Crops, Field Grown Orna- mentals and Bulb Crops (all states except California	To promote plant growth and/or overcome the effects of excessive use of a gibberellin inhibiting plant growth regulator.	1-25 ppm a.i.	Begin by applying a single foliar application of a 1 ppm a.i. solution unless experience dictates a higher rate is appropriate. If desired results are not achieved, a reapplication or increased rate will be necessary. Do not use more than 25 ppm a.i.

NOTE: Gibberellic Acid is a potent plant growth regulator and overuse will result in undesirable effects including stem elongation. Assess the effect of N-LARGE on a small number of plants prior to making large scale applications.

13.4 TURFGRASS

)

states except	stress and light	
California)	frosts.	

NOTE: Application of N-LARGE to Bermudagrass grown in golf courses, parks and turf farms has been shown to initiate or maintain growth and prevent color change during periods of cold stress.

Do not exceed specific rates. Maintain adequate moisture and proper fertilization programs as indicated for the local area. Discontinue treatments if thinning is observed. Do not apply the high rate more frequently than every two weeks. More frequent mowing will be necessary. Do not use on domain turf.

16.0 STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

Pesticide Storage: Keep containers tightly closed when not in use. Store away from any heat source.

Pesticide Disposal: Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.

Container Disposal: Do not reuse empty containers. Triple rinse or equivalent; then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

17.0 WARRANTY

To the fullest extent permitted by law, neither the manufacturers nor the seller make any warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use of this material when such use is contrary to label instructions. Read and follow the label directions carefully.
