LICE-ENZ

FOAM
then
COMB

LICE KILLING SHAMPOO KIT
CONTAINS UP TO FOUR APPLICATIONS

Steps to treat lice infestation

1. See directions for activating metered valve on side panel.
2. Shake well. Apply as much FOAM then COMB as needed to the hair and scalp or any other infested areas until entirely wet. Do not use on eyelashes or eyebrows.
3. Allow FOAM then COMB treatment to remain in hair for 10 minutes, but no longer.
4. Wash hair thoroughly with warm water and shampoo or soap.
5. If desired, apply creme rinse to ease the nit removal process.
6. Comb hair with special no-nit comb (included) to remove dead lice and eggs.
7. After combing, rinse hair thoroughly.
8. Repeat treatment in 7-10 days if reinfestation has occurred.
9. Do not exceed 2 consecutive applications within 24 hours.

To help eliminate infestation, it is important to sterilize all clothing and bedding of infested person at time of treatment.

Directions for activating
metered valve.

1. Pull off and throw away the white tab on the side of the valve. (Note: in some instances the white tab may be missing due to shipping and handling. This does not affect the function or safety of the product.)
2. Line up the half circle under the valve cap until it fits over the nozzle.
3. Shake well.
4. Aim nozzle. Press down on valve cap and loose. A pre-measured amount of shampoo foam is delivered from the can each time you press down and release the valve cap.
5. See back panel for treatment instructions.
6. After treatment, turn valve cap back so that half circle is no longer over nozzle. (This prevents accidental release of foam.)
7. Store can at room temperature.

Note: The manufacturer of this product endorses the National Pesticide Association's "No Nit" policy. (See important reprint inside)
