NOTES TO PHYSICIAN This material contains a cholinesterase inhibitor. Measurement of blood cholinesterase activity may be useful in monitoring exposure but decisions regarding treatment will usually need to be made before test results are available. If signs of cholinesterase inhibition appear, atropine sulfate is antidotal. 2-PAM (PROTOPAM) is also antidotal and may be used in conjunction with atropine but should not be used alone.

WATER SOLUBLE PACKAGING

(To Be Used for Cotton WSP Formulation Only)

MULTIPLE PACKAGING

This bag contains multiple water soluble packets of ORTHENE 90 S. Do not handle the packets with wet gloves or allow the packets to become wet prior to addition to spray tank. Do not break open packets. Refer to the Tables of Equivalents to calculate the number of packets to use. If all packets are not used, close and reseal outer container to protect remaining packet(s).

SINGLE PACKAGING

This bag contains one water soluble packet of ORTHENE 90 S. Do not handle the packet with wet gloves or allow the packet to become wet prior to addition to spray tank. Do not break open packets. Refer to the Tables of Equivalents to calculate the number of packets to use. Open outer bag by pulling perforated tearstrip and drop the unopened inner packet of ORTHENE 90 S into spray tank.

PREPARATION OF SPRAY SOLUTION

To prepare spray solution, drop the unopened packet(s) of ORTHENE 90 S into a spray tank containing at least one-half the total quantity of water required. Direct water at the floating packet(s) and continue to add water with the agitator running until the spray volume is reached. **Do not add any liquid fertilizers, micronutrients or adjuvants to the spray solution until after the packet and its contents have completely dissolved.** Water soluble packet(s) should completely dissolve in approximately five minutes. Dissolution rate may be slowed by cold water, lack of agitation, or water containing high concentrations of boron or sulfur.

GENERAL INFORMATION

ORTHENE 90 S a soluble powder is an insecticide for control of pests on selected agricultural crops and in certain non-crop areas. The active ingredient in ORTHENE 90 S is acephate, a water-soluble insecticide readily absorbed by plant roots and foliage to give systemic control of feeding insects. Insect pests are generally controlled more effectively by Orthene through ingestion than by contact. Application of ORTHENE 90 S to maintain control should be repeated only as directed.

[The following paragraph is for ornamental uses labels only.]

To ensure that ORTHENE 90 S a soluble powder is compatible with the variety or cultivar of the listed ornamental crops under your specific conditions, test the product on a limited scale and observe for phytotoxicity over two weeks before making large scale applications. The large number of existing ornamental varieties and cultivars coupled with the constant introduction of new variants precludes specific testing of each type. It is impossible to field test this product in every locale where sold or in all of the combinations created by differences including those in soil or media type, pH, moisture of fertility, environment conditions such as temperature, lighting or degree days and horticultural practice including planting dates, control of other pests, timing of various horticultural practice and the manner of use and application of this product.

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL MAY RESULT IN POOR INSECT CONTROL, CROP INJURY, AND/OR ILLEGAL RESIDUES.

Do not apply under conditions involving possible drift to food, forage or other plantings that might be damaged or the crops thereof rendered unfit for sale, use or consumption.

COTTON SEED HOPPER BOX AT-PLANTING APPLICATION [HOPPER BOX USE NOT INCLUDED ON WSP PACKAGED PRODUCT]	Black (Greasy) Cutworm Cotton Aphids Thrips (Including Western Flower Thrips)	2.5 to 3.25 oz.	Add dry ORTHENE 90 S to seed in the planter box to achieve an application rate of 3 to 4 oz./A. Even coverage of seed is required for acceptable insect control. Plants grown from improperly treated seed may not exhibit insect control. To obtain even coverage, fill planter box ½ full of seed, add ¾ of required ORTHENE 90 S and mix thoroughly. Add remainder of seed and ORTHENE 90 S to the hopper box and thoroughly mix. Improved distribution of ORTHENE 90 S on seed can be achieved by premixing both in a separate container and then transferring treated seed to hopper box. Use of ORTHENE 90 S with air planters is not recommended since loss of product will occur.	At-Planting Application
USE PRECAUTIONS: Do not use treated seed for food or feed purposes or process for oil. ORTHENE 90 S cotton seed hopper box treatment is not permitted in Arizona, California and the Blacklands of Texas.				
IN FURROW By Ground: 3 to 5 gals./A of spray. AT-PLANTING APPLICATION	Aphids* Black (Greasy) Cutworm (Except CA) Thrips (Including Western Flower Thrips) * Excluding Cotton Aphids in AZ & CA.	0.56 to 1.1 lb. NOTE: For the Blacklands of Texas use 1.1 lb./A ORTHENE 90 S.	Use flat-fan nozzles for in-furrow application. Align nozzles to ensure good spray deposition into the seed furrow. Cone type nozzles are not recommended since unacceptable spray deposition may occur. Securely fasten spray-system tubing to furrow opener and check frequently to ensure proper positioning and operation. ORTHENE 90 S can be mixed with fungicides that are sprayed in-furrow for disease control.	At-Planting Application

**COMMERCIALLY TREATED COTTONSEED
(FOR USE BY COMMERCIAL SEED TREATERS ONLY)**

ORTHENE 90 S contains a water-soluble systemic insecticide which helps to reduce injury to cotton seedlings by several insects.

TABLE 5. - Commercially Treated Cottonseed - Recommendations for Use

PESTS	AMOUNT PER 100 LBS. COTTONSEED	EFFICACY	ADDITIONAL USE INSTRUCTIONS
Thrips Cotton Aphids	7.1 oz.	Gives effective reduction of Thrips and Cotton Aphids for up to three weeks after planting.	ORTHENE 90 S can be mixed in the slurry tank with most of the fungicide seed treatments in common use. ORTHENE 90 S can also be applied as a separate treatment using enough water to give adequate coverage of the seed. ORTHENE 90 S dissolves quickly in water with a minimum of agitation.
Black (Greasy) Cutworm	7.1 oz.	Gives effective reduction of Black (Greasy) Cutworm from planting through the 3rd to 4th leaf stage of development. When planting into fields where large cutworms are present (5th instar and larger) economic damage may occur.	

USE PRECAUTIONS: This formulation does not contain a dye. Compliance with the Federal Seed Act and 21 CFR Chapter 1, Section 2.5 requires that all seed treated with this product must be colored to distinguish from, and prevent subsequent inadvertent use as, food for man or feed for animals.

Treated seed must not be used for, or mixed with food or animal feed, or processed for oil. Seed treated with ORTHENE 90 S may be considered adulterated under state and federal laws if sold or shipped as food or feedstuffs. Seed commercially treated with ORTHENE 90 S must be labeled as follows: "TREATED SEED. DO NOT USE FOR FOOD, FEED OR OIL."

Observe all precautions and limitations on labeling of all products used in mixtures.

RESISTANCE-MANAGEMENT

Cotton pest control programs, especially those for control of silverleaf whitefly populations, should employ a properly designed resistance-management strategy. Such resistance-management strategies include mixture or rotation of alternative classes of chemistry including organophosphates, carbamates, pyrethroids or insect growth regulators. Consult your state or area agricultural extension service for local resistance management strategies and advice on alternative insecticides.

APPLICATION METHOD	PESTS CONTROLLED	RATES OF ORTHENE 90 S PER ACRE	REMARKS	DAYS TO HARVEST
FOLIAR By Ground or Sprinkler: Sufficient water to give thorough coverage. By Air: Minimum of 2 gals./A of spray.	Cranberry Blossom Worm Cranberry Cutworm Gypsy Moth False Armyworm Fireworms Spanworms Sparganothis	1.1 lbs. (17.6 oz.)	SPRINKLER IRRIGATION APPLICATION TO CRANBERRIES: This product may only be applied through sprinkler irrigation systems including center pivot, lateral move, end tow, side (wheel) roll, travelers, big gun, solid set, or hand move. Do not apply this product through any other type of irrigation system. Crop injury, lack of effectiveness, or illegal pesticide residues in the crop may result from non-uniform distribution of treated water. If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.	90
USE PRECAUTION: Note: Limit to one application per growing season. Do not apply more than 1.1 lbs./A (1 lb. ai) per season. Do not apply from start of bloom until all berries set.				
Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the label-prescribed safety devices for public water systems are in place. A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump. The pesticide injection pipeline must also contain a functional, normally closed solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock. Do not apply when wind speed favors drift beyond the area intended for treatment. Solid Set System: Apply specified dosage for the entire length of the irrigation period or for a 30 to 60 minute period at the end of a regular irrigation set or as a 30 to 60 minute injection as a separate application not associated with a regular irrigation. Allow time for all lines to flush the pesticide through all nozzles before turning off irrigation water. To ensure the lines are flushed and free of remaining pesticide, a dye indicator may be injected into the lines to mark the end of the application period. See NOTE . Center Pivot Systems: Inject the specified dosage per acre continuously for one complete revolution of the system. See NOTE . NOTE: Constant agitation must be maintained in the chemical supply tank during the entire period of insecticide application. Inject the product with a positive displacement pump into the main line ahead of a right turn to ensure adequate mixing. Application of more than label-recommended quantities of irrigation water per acre may result in decreased product performance by removing the chemical from the zone of effectiveness.
