RESISTANCE MANAGEMENT

NipsIt SUITE Cereals OF Seed Protectant contains Clothianidin which is a neonicotinoid and a Group 4A insecticide. Insect biotypes with acquired resistance to Group 4A insecticides may eventually dominate the insect population if Group 4A insecticides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by *NipsIt SUITE* Cereals OF Seed Protectant or other Group 4A insecticides. Valent U S A Corporation strives to maintain strong stewardship of this product by recommending that its use be coordinated in a planned resistance management strategy program established for the specific crop and area.

Contact your local extension specialist, certified crop advisors and/or manufacturer for insecticide resistance management or IPM recommendations for the specific site and resistant pest problems.

For further information or to report suspected resistance, you may contact Valent U S A Corporation at 800 682 5368.

PRECAUTIONS AND RESTRICTIONS

NipsIt SUITE Cereals OF Seed Protectant is formulated as a ready to use seed protectant formulation and must be used only in accordance with specifications on this label utilizing mechanical slurry or mist type seed treating equipment provided that the equipment can be calibrated to accurately and uniformly apply the product to seed. This product is for both commercial and on farm application. Do not use planter box or hopper box when applying product to seeds. Always mix product thoroughly before use.

As stated by regulations specified in 40 CFR 153.155, all seed treated with *NipsIt SUITE* Cereals OF Seed Protectant must be colored with an EPA approved dye or colorant to visually distinguish seed that is treated with a pesticide. This product contains such dye or colorant. This regulation is necessary to prevent treated seed from accidental use as a food for man or feed for animals.

Seed Quality and Storage of Treated Seed

Seed treatments applied to low vigor or poor quality seed or to mechanically damaged seed may result in loss of seed germination or reduced seedling vigor. To verify seed safety, treat a small portion of seed prior to treatment of an entire seed lot. Utilize standard seed germination methodologies to determine and verify seed safety. Proper storage conditions of treated seed are recommended. Due to seed quality and seed storage conditions beyond the control of Valent U S A Corporation, no claims are made to guarantee the germination of carry-over treated seed.

If so, mix *NipsIt SUITE* Cereals OF Seed Protectant and water thoroughly into slurry before treating seed. Recalibrate treating equipment to compensate for the addition of water. The amount of dilution water that is most suitable depends on the seed, treating equipment, and the temperature.

For preparation of product in a slurry mixture with water, use the following guideline:

<i>NipsIt SUITE</i> Cereals OF Seed Protectant Use Rate	Amount of water to be added to product	Total Slurry Volume to apply per cwt seed
5.0 fl oz /cwt seed	5.0 – 10 fl oz	10.0 – 15 fl oz
7.5 fl oz /cwt seed	7.5 fl oz /cwt	15 fl oz /cwt
