NOTE: Changes in labeling formula differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above U.S. EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby Registered/Reregistered under the Federal Insecticide, Fungicide, and Rodenticide Act.

A copy of the labeling accepted in connection with this Registration/Reregistration is returned herewith.

Registration is in no way to be construed as an indorsement or approval of this product by this Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is conditionally registered under section 3(c)(7)(A) of the Act. The following conditions apply:

1. Submit an application for a final printed label for your product under FIFRA sec. 3(c)(7) within 90 days of the registration date. Consult the following registrants of similar products for guidance:

2. Make the labeling changes to the label before you release the product for shipment:

- Add the phrase "EPA Registration No. 6249-3."

3. Submit five (5) copies of your final printed labeling before you release the product for shipment. Refer to the 4-79 enclosure for a full description of final printed labeling.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA sec. 6(c). Your release for shipment of the product constitutes acceptance of these conditions.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

1" CHLORINATING TABLETS contain a concentrated chlorinating compound which, when used as directed in your Tablet Feeder or other Trichloro-s-triazinetrione feeding devices, will provide a stabilized chlorinating disinfection and algae control program. The filter system should be in proper working condition, with pH maintained between 7.2 and 7.8, total alkalinity between 100 to 150 ppm, and calcium hardness between 150 to 300 ppm.

Initially stabilize freshly filled pools with 20-30 ppm Stabilizer to increase chlorine stability and reduce the degradation effect of sunlight. Maintain a stabilizer residual of 40-50 ppm.

A chlorine residual of 1.0 to 2.0 ppm free available chlorine must first be established in the pH adjusted and conditioned pool. If the residual is established with Chlorinating Tablets in a chemical feeder, set the feeder at the highest rate in accordance with the feeder manufacturer's instructions. When the residual reaches 1.0 to 2.0 ppm, adjust the feeder accordingly. To determine chlorine residual use a test kit. Maintain a constant level of 1.0 to 2.0 ppm free available chlorine in the pool water (normally, 1 to 2 ounces of this product per 10,000 gallons daily). Feeder manufacturer's operating instructions will provide settings for this and other feed rates. Pool disinfection may be accomplished by putting Chlorinating Tablets into skimmers. Determine the demand by use of a test kit and use the number of tablets necessary to satisfy this demand.

Check chlorine residual daily using a test kit to determine if further adjustments may be necessary to maintain the recommended level of available chlorine in the pool water. Do not swim in the water if the chlorine residual is greater than 3.0 ppm.

At the end of the swimming pool season or when water is to be drained from the pool, chlorine must be allowed to dissipate from treated pool water before discharge. Do not chlorinate the pool within 24 hours prior to discharge.
