DURSBAN® 2E Insecticide (EPA Reg. No. 62719-65)

Dursban 2E for Control of Fire Ants by Mound Injection

- This labeling must be in the possession of the user at time of application.
- Before using DURSBAN 2E, read and carefully follow all applica- directions, precautionary information and statements of hazard given on the label affixed product container.
- Before buying or using this product, read "Warranty Limitations and Disclaimer" on DURSBAN 2E label. If terms are not acceptable, return unopened package to seller for refund of purchase price paid. Otherwise, use by the buyer or any other user constitutes acceptance of the terms under "Warranty Limitations and Disclaimer".
- Do not apply DURSBAN 2E through any type of irrigation system for the use described below.

Fire ants may be controlled with DURSBAN 2E using a mound injection application method. Dursban 2E controls fire ants through direct contact, however, application to polygynous (multiple queen) colonies may not completely impair the mound.

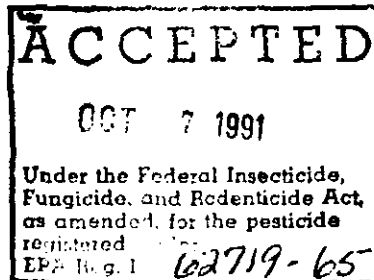

Directions for Use

Prepare a 0.25% to 0.5% treatment solution by dilution of DURSBAN 2E in water according to directions provided on the DURSBAN 2E label.

Treatment of fire ant mounds: Apply the treatment solution to fire ant mounds by mound injection using a soil injection wand. Apply 1-2 ounces to the top of the mound. Then immediately insert injector wand into the mound and inject an additional 10 ounces of the treatment solution. Treat new mounds as they appear.

Precaution:

Excessive soil disturbance during treatment of fire ant mounds may cause ant migration, reducing product effectiveness.
