A selective herbicide for the preemergence control of annual grasses and broadleaf weeds

Active Ingredient:
N-buty-1-N-ethyl-a, a-difluoro-2,6-dinitro-p-toluidine .......... 19.4%
Inert Ingredients ............................................. 80.6%
Contains 1.5 pounds active ingredient per gallon.

Precautionary Statements
Hazards to Humans and Domestic Animals
Keep Out of Reach of Children

DANGER
Corrosive + Causes Irreversible Eye Damage + Causes Skin Irritation + Harmful if Swallowed, Inhaled Or Absorbed Through The Skin + Balan E.C. May Cause Skin Sensitization Reactions In Certain Individuals
Do not get in eyes, on skin, or on clothing. Avoid breathing spray mist or vapors. Wear protective clothing such as goggles or face shield, and coveralls, a long-sleeved shirt and impermeable gloves when handling this product. Wash thoroughly with soap and water after handling. Remove contaminated clothing and wash before reuse.

First Aid
If in eyes: Hold eyelids open and flush with a steady, gentle stream of water for 15 minutes. See an ophthalmologist immediately. If swallowed: Call a physician or Poison Control Center. This product contains an aromatic hydrocarbon and can be extremely harmful if swallowed. If this happens and the patient is conscious, immediately administer activated charcoal (6-8 teaspoonsfuls) with water. If patient is unconscious, do not induce vomiting.

Environmental Hazards
This product is toxic to fish. Do not apply directly to water or wetlands. Do not contaminate water by cleaning of equipment or disposal of wastes. Drift and runoff from treated areas may be hazardous to aquatic organisms in neighboring areas.

Refer to attached label booklet for precautionary information, First Aid and Directions for Use including STORAGE AND DISPOSAL. Notice: Read the entire label. Use only according to label directions. Before buying or using this product, read “Warranty Disclaimer” and “Limitation of Remedies” in the enclosed label booklet.

In case of an emergency endangering life or property involving this product, call collect 517-536-4400.

Agriculture Chemical: Do not ship or store with food, feeds, drugs or clothing.

EPA Reg. No. 62719-94

# Precautionary Statements

## Hazards to Humans and Domestic Animals

**DANGER PELIGRO:**

Precautions to use:  This product is toxic to fish. Do not apply directly to water or wetlands (streams, bogs or marshes). Runoff and drift from treated areas may be hazardous to aquatic organisms in neighboring areas. Do not apply when conditions favor runoff or drift from the target area. Do not contaminate water when disposing of equipment washwaters.

---

**BEST AVAILABLE COPY**
Directions for Use

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all Directions for Use carefully before applying.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal.

Storage: Avoid freezing. Store above 40°F. If frozen, poor weed control may result. Do not store near heat or open flame. Store in original container only. Mini-bulk tanks that have been used for phenoxy-type herbicides should not be used for Balan E.C. In case of leak or spill, use absorbent materials to contain liquids and dispose as waste.

Pesticide Disposal: Pesticide wastes are toxic. Improper disposal of excess pesticide, spray mixture, or rinse water is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your state pesticide or environmental control agency, or the hazardous waste representative at the nearest EPA regional office for guidance.

Metal Container Disposal: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Plastic Container Disposal: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by incineration, or, if allowed by state and local authorities, by burning, or steam. Bulk/Mini-bulk Tank Disposal: Triple rinse (or equivalent) and wash with appropriate cleaners before reusing.

General Information

Balan E.C. herbicide is a preemergence herbicide for control of annual grasses and broadleaf weeds. In the northern U.S., Balan E.C. is required to assure effective season long weed control. Balan E.C. may be applied in liquid spray of water or liquid fertilizer, or "sprayed" on dry bulk fertilizer. Balan E.C. controls weeds as they germinate. Balan E.C. does not control established weeds.

General Use Precautions

When applied according to label directions and under normal growing conditions, Balan E.C. will not harm the treated crop. Over-application can result in crop injury, delayed emergence or soil residue. Uneven application or improper soil incorporation of Balan E.C. can result in erratic weed control or crop injury. Seedling disease, cold weather, deep planting, excessive moisture, high salt concentration or drought may weaken crop seedlings and increase the possibility of damage from Balan E.C. Under these conditions, delayed crop development or reduced yields may result.

In the arid, irrigated areas of the Western United States - Arizona, California, Idaho, Montana, Nevada, Oregon, Utah, Washington and Wyoming - certain crops are susceptible to injury when planted in soil previously treated with Balan E.C. To avoid such injury, do not plant wheat, barley, rye, other grasses, or onion within 12 months following an application of Balan E.C.

Do not plant milo, grain sorghum, corn, oats, spinach, red beets, sugar beets, or other root crops for 12 months following an application of Balan E.C.

Balan E.C. should not be applied to soils that are wet or subject to prolonged periods of flooding as poor weed control may result.

Chemigation: See chemigation instructions elsewhere in this label.

Soil Texture Guide for Application Rates

Application rates of Balan E.C. are based on soil texture. A fine textured clay soil will require a higher application rate than a coarse textured sandy soil. Application rates of Balan E.C. are determined by "soil texture groupings" (coarse, medium or "*"), which correspond to the various field soil textural classes to be treated. Using the table below, determine if the field soil to be treated is coarse, medium or fine and use the application rate recommended for that soil texture grouping.

<table>
<thead>
<tr>
<th>Soil Texture Class</th>
<th>Soil Classification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coarse (Light Soil)</td>
<td>Sand, loamy sand, sandy loam</td>
</tr>
<tr>
<td>Medium Soil</td>
<td>Loam, silty clay loam, silt loam, silt, sandy clay loam*</td>
</tr>
<tr>
<td>Fine (Heavy Soil)</td>
<td>Clay, clay loam, silty clay loam, silty clay, sandy clay, sandy clay loam*</td>
</tr>
</tbody>
</table>

*If silty clay loam or sandy clay loam soils are transitional soils and may be classified as either medium or fine textured soils. If silty clay loam or sandy clay loam soils are predominately sand or silt, they are usually classified as medium textured soils. If they are predominately clay, they are usually classified as fine textured soils.

Tested Fertilizers

Handbook of Fertilizers

Testing for Compatibility in

Compatibility Testing

Testing for Compatibility in

Compatibility Testing

Compatibility Testing

Compatibility Testing

Compatibility Testing
which will not disperse again when agitated, a compatibility agent is needed. If the mixture is easily
dispersed to its original state with slight agitation,
no compatibility agent is needed, however, good
agitation must be provided to maintain dispersion in
the spray tank from entering through application.

4. If the need for a compatibility agent is demonstrated
in step 3, it may be tested as follows: Using a clean
clear plastic or glass container, start at step 1, above.
Add 1/2 teaspoonful of the compatibility agent to the
liquid fertilizer, mix well, and then repeat steps 2
and 3.

An effective compatibility agent will cause the mixture to
remain uniformly mixed with little or no separation or oil
rising to the surface for 1/2 hour or longer. If slight
separation occurs, 2 to 3 invertations of container should
provide a uniform mixture. If oily curdles form which will
not disperse, try adding additional compatibility agent or
test the effectiveness of an alternative compatibility
agent using the procedure above. A clean jar should be
used for each test.

Compatibility Agents
The phosphate ester-type surfactants listed below are
designed for use with liquid fertilizers and can be mixed
directly with liquid fertilizer. They usually do not work well as compatibility agents for tank mixes in plain water. Add the
compatibility agent just before adding herbicides. Read
and follow label directions for the compatibility agent.

1. Sporine NBE (Misco Chemicals Co., Chicago, IL)
2. Compat (Farn Chemicals, Inc., Aberdeen, NC). Not
for use in California.
3. Unite (Hopkins Ag Chemical, Madison, WI)
4. T-Muls 734-2 (Thompson-Hayward Chemical Co.,
Kansas City, MO). Not for use in California.
5. Figo Compatibility Agent (Figo Co.,
Buclaw, KY).
6. Amoco Spray Mate - (Amoco Oil Co., Chicago, IL).
Not for use in California.

Application Directions

Application in Liquid Sprays
Apply Balan E.C. anytime after January 1 when soil can
be worked safely. Balan E.C. is in a total spray volume of
5 to 40 gallons of water or liquid fertilizer per acre
(broadcast basis), using any properly calibrated low
pressure herbicide sprayer that will apply the spray
uniformly. Balan E.C. rate recommendations are
provided for broadcast application. For band
applications, use proportionally less. As the amount of
spray volume per acre decreases, the importance of
accurate calibration and uniform application increases.
Check the sprayer daily to ensure proper calibration and
uniform application. Avoid boom overlaps that will
increase rates above those recommended.

Application in Dry Bulk Fertilizer
Balan E.C. may be impregnated on most dry bulk
fertilizers. Uniformly applied, dry bulk fertilizer
impregnated with Balan E.C. has provided weed and
graz control equal to equivalent rates of Balan E.C.
in liquid carriers. Follow Balan E.C. label directions
regarding application rates, crops, incorporation
directions, use precautions and limitations.

Compliance with state regulations relating to dry bulk
fertilizer blending, registration, labeling and application
are the responsibility of the individual and/or company
offering the fertilizer or chemical mixture for sale. To
provide sufficient soil coverage, the required amount of
Balan E.C. must be impregnated on a minimum of
200 pounds of dry bulk fertilizer per acre. If less than
6 pounds of Balan E.C. are needed to impregnate a ton of
fertilizer, add sufficient water to provide a minimum
spray volume of 6 pints per ton.

Use any closed drums, bulk, ribbon or other commonly
used dry bulk fertilizer blender. Noodle placement
should provide uniform coverage of the fertilizer. When
casted ammonium nitrate and lime are used alone, do not impregnate with Balan E.C.

The following formula may be used to calculate the
amount of Balan E.C. required to impregnate a ton of
dry bulk fertilizer:

\[
\text{Amount of Balan E.C.} = \frac{\text{Application Rate}}{1000} \times \frac{\text{Pounds of Fertilizer}}{\text{Pounds of Water}}
\]

Chemigation

Balan E.C. may be applied through properly equipped
chemigation systems for weed control in certain crops
specified in the "Approved Crops" section of the label.
Read and follow all label instructions.

General Chemigation Directions

Apply Balan E.C. only through continuously moving
center point, lateral move, or and low sprayline irrigatior
systems equipped for chemigation. Do not apply this
product through any other type of irrigation system.
Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

If you have questions about calibration you should contact state extension specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system.

A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Precautions - Posting of Treated Areas
Posting of areas to be chemigated with Balan E.C. is required when (1) any part of the treated area is within 300 feet of sensitive areas such as residential areas, labor camps, businesses, day care centers, hospitals, in-patient clinics, nursing homes or any public areas such as schools, parks, playgrounds, or other public facilities not including public roads, or (2) when the chemigated area is open to the public such as golf courses or retail greenhouses.

Posting must conform to the following requirements.
Treated areas shall be posted with signs at all usual points of entry and along likely routes of approach from the listed sensitive areas. When there are no usual points of entry, signs must be posted in the corners of the treated areas and in any other location offering maximum visibility to sensitive areas. The printed side of the sign should face away from the treated area towards the sensitive area. The sign shall be printed in English. Signs must be posted prior to application until foliage has dried and soil surface water has disappeared. Signs may remain in place indefinitely as long as they are composed of materials to prevent deterioration and maintain legibility for the duration of the posting period.

All words shall consist of letters at least 1/2 inches tall, and all letters and the symbol shall be a color which sharply contrasts with their immediate background. At the top of the sign shall be the words KEEP OUT, followed by an octagonal stop sign symbol at least 6 inches in diameter containing the word STOP. Below the symbol shall be the words PESTICIDES IN IRRIGATION WATER.

Sprinkler Chemigation Directions
The following directions must be followed for all recommended sprinkler irrigation systems (center pivot, lateral move or end row):

1. The system must contain a functional check valve, vacuum relief valve, and low pressure drain properly located on the irrigation pipeline to prevent water source contamination from back-flow.

2. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

3. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

4. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

5. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point that pesticide distribution is adversely affected.

6. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

7. Do not apply when wind speed favors drift beyond the area intended for treatment.

8. Balan E.C. should be injected continuously throughout the chemigation period. The chemigation metering pump should be checked periodically during application to insure proper operation.

9. The injection metering pump must be calibrated as specified by the manufacturer.

10. During chemigation, maintain agitation in supply tank at all times.

11. Balan E.C. may cause some staining of plastic hoses and tanks.
12. Apply Balent E.C. in sprinkler irrigation equal to 1/2 to 1 inch of water.

Chemigation System Calibration

Sample calculation for use of Balent E.C. in a chemigation system:

- Assume, in this example, 133 acres are to be covered by a chemigation treatment.
- Product required, assuming 3 quarts per acre on a coarse-textured soil, is 400 quarts (100 gallons).
- Add 100 gallons of product directly to the injection supply tank.
- Adjust the injection system to deliver 100 gallons during the time required to apply 1 inch of water to the 133 acres.

If the irrigation system requires 20 hours to apply 1 inch of water to 133 acres, the injection rate is 5 gallons per hour and is calculated as follows:

- 100 gallons / 20 hours = 5 gal / hr
- 5 gallons / hour = 640 fluid ounces (fl oz) / hr

Proper calibration requires the injection pump to be adjusted to deliver 10.57 fl oz per minute and is calculated as follows:

- 640 fl oz per hr / 60 min per hr = 10.67 fl oz / min

Chemigation Mixing Directions

Undiluted Balent E.C.: When used alone, the injection of undiluted Balent E.C. is recommended in chemigation systems. For undiluted use, the metering, pump, supply tank, and any associated equipment must be thoroughly clean and dry before Balent E.C. is added to the system for injection. When injecting undiluted Balent E.C., maintain continuous agitation in the supply tank.

Diluted Balent E.C.: Balent E.C. may be diluted if required to achieve accurate calibration for existing equipment. Partially fill the injection supply tank with a volume of water equal to the amount of Balent E.C. required. Do not add water to Balent E.C. Start agitation. Add the required amount of Balent E.C. to water in the supply tank and continue mixing while filling the tank to the final volume required by the injection pump calibration. When injecting diluted Balent E.C., maintain continuous agitation in the supply tank.

Soil Incorporation Directions

Before planting, Balent E.C. must be incorporated one time within 4 to 8 hours after application. A second incorporation is required with most equipment (see "Incorporation Equipment" below, for specific instructions). If Balent E.C. is applied to a wet, warm soil surface or if the wind velocity is consistently greater than 10 mph, variable weed control may result. Variable weed control may also result if incorporation is delayed more than 6 hours in the Eastern United States or 4 hours in the Western United States. Operate equipment to mix Balent E.C. into the top 2 to 3 inches of the topsoil. Generally, incorporation equipment will mix Balent E.C. approximately half as deep as equipment is operated. For example, operating equipment 4 inches deep will mix Balent E.C. into approximately the upper 2 inches of the seedbed.

Special Note: In the Western United States, extremely high temperatures and intense sunlight may be present at the time of application. Under such conditions, Balent E.C. must be incorporated within 4 hours after application to prevent loss of herbicidal activity.

Incorporation Equipment

Use equipment that thoroughly mixes Balent E.C. into the soil. Shallow incorporation less than 2 inches deep in the final seedbed may result in erratic weed control. Use of equipment not listed below may result in poor or erratic weed control and/or crop injury. The following types of equipment are recommended:

- Tandem disc: Set equipment to cut 4 to 6 inches and operate at 4 to 6 mph. Two incorporation passes in different directions are required. A single incorporation pass with a tandem or double disc does not provide adequate soil mixing.
- PTO driven equipment (tillers, cultivators, hoes): Set equipment to operate 4 to 6 inches deep and operate no more than 4 mph. Only one incorporation pass is necessary with this type of equipment.

Precautions: Use of PTO equipment alone for incorporation in coarse (loamy) soils may result in an uneven distribution of Balent E.C. This occurs when soil containing Balent E.C. is deposited into wheel tracks that are deeper than the operating depth of the tiller. This results in an excessive amount of Balent E.C. in tractor wheel depressions and poor weed control in intervening areas containing less than the intended rate of Balent E.C.

Cultivation After Planting

Soil treated with Balent E.C. may be shallowly cultivated or rotary hosed without loss of weed control activity. On crops that require more than the 2 inches of Balent E.C. before a second unorthodox soil may be exposed resulting in loss of weed control. In bedded culture, if weeds germinate in the
bottom of the furrow due to the removal of treated soil, these weeds should be controlled by cultivation.

Annual Grasses and Broadleaf Weeds Controlled by Balan E.C.

**Annual Grasses:**
- Common Name: Annual bluegrass
- Scientific Name: Poa annua

**Broadleaf Weeds:**
- Common Name: Broadleaved signalgrass
- Scientific Name: Brachiaria platyphylla
- Common Name: Crabgrass
- Scientific Name: Digitaria spp.
- Common Name: Crowfootgrasses
- Scientific Name: Dactyloctenium aegyptium

**Perennials:**
- Common Name: Portulaca oleracea

Approved Crops

**Alfalfa, Birdsfoot Trefoil, Clover**

Special Use Instructions

Use the higher indicated application rate on coarse and medium soils where fall panicum or broadleaf signalgrass is present, or where heavy weed populations are present.

**Pigweeds**
- Common Name: Redroot pigweed
- Scientific Name: Echinochloa crus-galli

**Reds**
- Common Name: Portulaca oleracea

**Cucurbits**
- Common Name: Cucumis sativus

**Lettuce**
- Common Name: Lettuce

**Broadleaf Weeds:**
- Common Name: Broadleaved signalgrass

**Special Use Instructions**
Use the higher indicated application rate on coarse and medium soils where fall panicum or broadleaf signalgrass is present, or where heavy weed populations are present.
Chemigation -
Balan E.C. - Alone
Balan E.C. may be applied through properly equipped chemigation systems for weed control in peanuts. Refer to the “Chemigation” section of this label for proper procedure. Apply Balan E.C. in 1/4 to 1 inch of irrigation water. Planting and application of Balan E.C. should occur within 2 days after the last tillage operation. To be effective, Balan E.C. must be applied before weed emergence.

Cultivation
Soil treated with Balan E.C. may be shallow-cultivated or tilled up to 40 gallons per acre. The Balan E.C. plus Dust tank mix controls weeds susceptible to Balan E.C. plus those weeds listed on the Dust label.

Aerial Application: Apply and incorporate the Balan E.C. plus Dust tank mix up to 14 days before planting. Use a minimum spray volume of 5 gallons per acre.

Tank Mixes with Balan E.C.

Balan E.C. plus Dual Tank Mix
Apply and incorporate the Balan E.C. plus Dual tank mix up to 14 days before planting. A total spray volume of 10 to 40 gallons per acre. The Balan E.C. plus Dual tank mix controls weeds susceptible to Balan E.C. plus those weeds listed on the Dual label.

Aerial Application: Apply and incorporate the Balan E.C. plus Dual tank mix up to 14 days before planting. Use a minimum spray volume of 5 gallons per acre.

Fall Panics Control: Apply the 4 qt/Acre rate of Balan E.C. in combination with 2 1/2 pt of Veranem on coarse soils and 3 pt of Veranem on medium soils where tall panicsum is present or where weed populations are heavy.

Precautions: Refer to the Veranem label for additional use directions, precautions and limitations before use.

Warranty Disclaimer
DowElanco warrants that this product conforms to the chemical description on the label and is reasonably fit for the purposes stated on the label when used in strict accordance with the directions, subject to the inherent risks set forth below. DOWELANCO MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER EXPRESS OR IMPLIED WARRANTY.

Inherent Risks of Use
It is impossible to eliminate all risks associated with the use of this product. The injury, lack of performance, or other unintended consequences may result because of such factors as use of the product contrary to label instructions (including conditions noted on the label), such as unseasonable temperatures, soil condition, etc., abnormal conditions (such as excessive rainfall, drought, tomatoes, hurricanes), presence of other materials, the manner of application, or other factors, all of which are beyond the control of DowElanco or the seller. All such risks shall be assumed by Buyer.
Limitation of Remedies

The exclusive remedy for losses or damages resulting from this product (including claims based on contract, negligence, strict liability, or other legal theories), shall be limited to, at DowElanco’s election, one of the following:
(1) Refund of purchase price paid by buyer or user for product bought, or
(2) Replacement of amount of product used.

DowElanco shall not be liable for losses or damages resulting from handling or use of this product unless DowElanco is promptly notified of such loss or damage in writing. In no case shall DowElanco be liable for consequential or incidental damages or losses.

The terms of the Warranty Disclaimer above and this Limitation of Remedies cannot be varied by any written or verbal statements or agreements. No employee or sales agent of DowElanco or the seller is authorized to vary or exceed the terms of the Warranty Disclaimer or this Limitation of Remedies in any manner.

Amendments:

1) Use on alfalfa, birdsfoot trefoil, clover (alsike, ladino and red), and direct seeded lettuce deleted from product label.
