Surflan can be tank-mixed with Goal 1.6E and paraquat.

Surflan/Goal provides preemergence control of the following weeds in addition to those controlled by Surflan alone:

Burclover	Mallow, little
Filaree, broadleaf	(Cheeseweed)
Filaree, redstem	(Malva)
Groundsel, common	Redmaids
Lettuce, prickly	Sowthistle, annual
London rocket	

Paraquat may be tank-mixed with Surflan/Goal to provide nonselective, post-emergence control of existing emerged annual weeds and provide top kill of existing perennial weeds.

The tank-mix is recommended for application to dormant crops including:

Almond	Peach
Apricot	Plum
Grape	Prune
Nectarine	

General Directions: Best preemergence activity for Goal is obtained when the tank-mix is applied to a relatively weed-free established berm or soil surface.
