**Treflan M.T.F. (EPA Reg. No. 62719-116)**
**(For Distribution and Use Only in the State of Hawaii)**

## Treflan M.T.F. Postplant Surface Applied in Sugarcane for Control of Most Annual Grasses, Including Guineagrass

- This labeling must be in possession of the user at the time of application.
- Refer to the TREFLAN M.T.F. label for weeds controlled, additional use directions, precautions and limitations before use.

**Application Directions:**
Surface apply TREFLAN after planting (for plant cane) or after harvesting (for ratoon cane). Apply TREFLAN prior to germination and emergence of grass weeds. For best results in plant cane, the soil surface should be smooth and finely tilled. Apply TREFLAN as soon as possible after tillage and planting before germination and emergence of grass weeds. For optimum efficacy in ratoon cane, minimize surface residue from previous crop before applying. For best results, apply TREFLAN just before anticipated rainfall in non-irrigated and furrow-irrigated sugarcane. Apply 0.5 inch or more irrigation in drip-irrigated or sprinkler-irrigated sugarcane as soon as possible after applying TREFLAN.

**Broadcast Application Rates per Acre:**
Apply TREFLAN M.T.F. at 6 to 8 pints per acre for all soil types.

**Repeat Applications:**
Subsequent germination flushes of grass weeds may occur prior to the development of a full dense canopy of sugarcane. Once this occurs, additional grass weed establishment is strongly suppressed. One or two additional applications of TREFLAN can be applied to maintain weed control during the early crop development period. For repeat applications, direct the spray to the soil surface to minimize interception of the herbicide by the crop.

**Use Precautions:**
- Do not apply TREFLAN as a postplant surface applied treatment within 180 days of harvest.
