Commercial certified applicators must also ensure that all persons involved in these activities are informed of the precautionary statements.

Grazon* P+D

EPA Reg. No. 62719-182

Acres Seeded to Permanent Grasses and Conservation Reserve Program (CRP) Acres

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Grazon P+D before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Grazon P+D according to this supplemental label is subject to all use precautions and limitations imposed by the label affixed to the container for Grazon P+D.

Directions for Use

Applications of Grazon* P+D herbicide should be made after perennial grasses are well established (have developed a good secondary root system and show good vigor). Most perennial grasses show improved tolerance to the herbicide at this stage of development. Conditions that stress grasses, such as drought, will increase potential for injury to the grass at all stages of growth.

Broadcast Treatment (Ground and Aerial Applications):

Apply in 2 or more gallons of water per acre by air or 5 or more gallons of water per acre by ground. For control of actively growing susceptible annual broadleaf weeds, (including Russian thistle) apply 1 to 4 pints per acre of Grazon P+D. For control of actively growing perennial weeds, use up to 4 pints per acre of Grazon P+D. Refer to the product label for Grazon P+D for weeds controlled and application rates for specific weed species.

Precautions and Restrictions:

- Do not use Grazon P+D if legumes are a desired cover during CRP.
- Refer to the main product label for Grazon P+D for grazing and crop-rotation restrictions.
