EPA Reg. No. 62719-188

Weed Control in Safflower, Including Control of ALS Resistant Kochia

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Sonalan HFP before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Sonalan HFP according to this supplemental labeling is subject to all use precautions and limitations stated below or imposed by the label affixed to the container for Sonalan HFP.

Directions for Use

Apply Sonalan* HFP as a preplant incorporated treatment in the fall or in the spring prior to planting safflower. Refer to main product label for General Information, including mixing directions, application methods, soil incorporation, and application timing. In addition to weeds listed on the product label, Sonalan HFP is useful for control of ALS resistant kochia. Use the higher rate in rate range where difficult-to-control weeds or high weed populations are anticipated.

Broadcast Rates per Acre:

Soil Texture	Sonalan HFP (pt/acre)
Coarse	1 1/2 - 2
Medium	2 - 2 1/2
Fine	2 1/2 - 3

Precautions: To avoid crop injury, use the correct rate for the soil texture of the treatment area. Prolonged wet or cold soils, deep seed placement, soil crusting, or application overlaps may combine to cause slowed or reduced emergence.

Restrictions:

- Make only one application per crop season using ground broadcast equipment.
- Do not exceed 3.0 pt/acre per crop year.
- Do not allow grazing or harvest crop from treated soil for hay or silage.
