

U.S. ENVIRONMENTAL PROTECTION AGENCY **Gffice of Pesticide Programs** Registration Division (H7505C) 401 MM St., S.W. Washington, D.C. 20460

62719-220

EPA Reg.

Number:

Date of Issuence:

MAR 26 1993

NOTICE OF PESTICIDE:

<u>x</u> Registration ____ Reregistration

(under FIFRA, as amended)

Term of Issuence: Until Reregistration

Name of Pesticide Product:

Lorsban 4E-HF

Name and Address of Registrant (include ZIP Code):

DowElanco Quad IV--9002 Purdue Road Indianapolis, Indiana 46268-1189

Note: Changes in Labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any corre mondence on this product always refer to the above EPA registration number.

On the basis of information furnished by the registrant, the above named pesticide is hereby registered/reregistered under the Federal Insecticide, Fungicide and Rodenticide Act.

Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the en/ironment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.

This product is conditionally registered in accordance with FIFRA sec. $3(c)(7)(\lambda)$ provided that you:

- Submit and/or cite all data required for registration/ reregistration of your product under FIFRA sec. 3(c)(5) when the Agency requires all registrants of similar products to submit such data; and submit acceptable responses required for reregistration of your product under FIFRA section 4.
- Submit, as you agreed in your letter dated February 25, 1993, new acute dermal and acute inhalation studies if the upgrades for these studies that are presently under review are found to be unacceptable.
- Change the label by revising the EPA Registration Number to read, "EPA Reg. No. 62719-220."

Signature of Approving Official:

DENINIS H. EDWARDS

Date:

Dennis H. Edw ~ds, Jr.

Enclosure

Lorsban* 4E-HF Insecticide

For control of various insects infesting certain field, fruit, nut and vegetable crops

Active Ingredient:	
chiorpyrilos: O,O-diethyl-O-(3,5,6-trichloro-2-pyridinyl)phosphorothioate	41.7%
Inert Ingredients	58.3%
Total	
Contains 4 pounds of chlorpyrifes per callon.	

EPA Reg. No. 62719-XXX

KEEP OUT OF REACH OF CHILDREN

WARNING AVISO:

PRECAUCION AL USUARIO:

Si ustad no lee inglés, no use este producto haste que la esiquete re haya aido explicada ampliamente.

PRECAUTIONARY STATEMENTS

scards to Humans and Domestic Anim

ly be fatal if swallowed. Hermful if absorbed through strin. Causes substantial but temperary eye injury. Causes strin irritation., Aveid breathing vaper or spray mist. Do not gift in eyes, on strin, or an debling. Wear presentive clothing, rubber gloves, and geggles. Wash thoroughly with soap and water after handling and before eating or smotting. Immediately remove contaminated clothing and wash before rouse. Destroy conterminated

Do not apply this product in such a manner as to directly or through drift expose workers or other persons. The area being treated must be vacated by unprotected persons. Keep away from feed, feedstalls and water supplies. See page 2 for additional farm werker safety requirements under the heading 'Heat to User - Reentry'.

First Ald

skin sensitization reactions in certain individuals

Caree

Lonaban 4E-HF may

If ewallowed: De not induse vamiling. Contains gramatic petroloum selvant. Gall a physician or Poison Control

Center immediately.

If in eyes: Plush with planty of water for at least 15 minutes. "A medical attention.

If on shire: Wash with planty of seep and water. Get medical attention if inflation persists. medical extenden if inflation persists.
If inheled: Remove to fresh air if effects easur. Get

ical attention.

Note te physician: Chierpyriles is a chelinesterase or. Treat symptomatically. If especial, plasme and red blood cell chalinesterase tests may indicate significance of exposure (baseline data are useful). Attenue, only by impostion, is the proferable entidete. Owner, such as 2-PAM/protopers, may be therepoute if used early; however, use only in corpuration with atrapine. In case of severe acute personing, use antidete immediately after establishing an epon airway and respiration

ENVIRONMENTAL HAZARDS

This sestaids is towa to birds and widitie, and extremely taxic to fish and aquatic organisms. Do not apply directly to water. Drift and runoff from treated areas may be hazardous to equatic organisms in adjacent equatic sites. Cover or incorporate spills. Do not contaminate water by clearing of equipment or disposal of waste. This product is highly texic to boos exposed to direct treatment or residues on blooming crops or weeds. Do not apply this product or allow it to drift to blooming crops or weeds if boos are visiting the treatment area. Pretective information may be obtained from your ecoporative agricultural extension service.

PHYSICAL OR CHEMICAL HAZARDS Hible - De not use or story near heat or open one. De not out or wold container.

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

Read all "DIRECTIONS FOR USE" carefully before applying.

NOTE TO USER - REENTRY

Do not allow reentry into treated areas within 24 hours unless protective clothing in worm. Protective clothing consists of at least a hat or other suitable head covering, a long-sleeved shirt and long-legged trousers or a coverall type garment (all of closely woven fabric covering the body, including the arms and legs), shoes and socks. Because certain states may require more restrictive reentry intervals for various crops treated with this product, consult your State Department of Agriculture for further information.

Written or oral warnings must be given to workers who are expected to be in a treated area or in an area about to be treated with this product. These oral warnings shell inform workers of areas or fields that may not be entered without protective clothing and actions to take in case of accidental exposure as shown by the first aid section on this label. When oral warnings are given, warnings shall be given in a language customanly understood by workers. Written warnings musi include the following information:

WARNING: Area treated with Loreban 4E-HF insecticius on (insert date of application). Do not enter without protective clothing for 24 hours. In case of accidental exposure.

STORAGE AND DISPOSAL

Sterage: Store in original container in secured dry storage area. Prevent cross-c intermination with other pesticides and fertilizers. Do not store above 100°F for extended periods of ame. Storage below 20 F may result in iomnation of crystals. If product crystallizes, store at 50 to 70°F and agitate to reclassive crystals. If container is damaged or spill occurs, use product immediately or dispose of product and damaged container as indicated below.

Peeticide Disposal: Do not contaminate water, food or feed by storage or disposal. Open dumping is prohibited. Peeticide wastes are toxic. Improper disposal of excess peeticide, spray muture, or rinsete is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your state pesticide or environmental control agency, or the hazardous waste representative at the issuest EPA Regional Office for guidance.

Centelner Disposal: Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sameny lendfill, or by other procedures approved by state and local authorities. For reusable partable containers, do not rinse or put any other material into container. When returning reusable portable container, seal all openings and return to

Centainer Disposal: Triple rince (or equivalent). Then purcaire and dispose of in a senitary tendifit, or by incorration, or, if allowed by state and local authorities, by burning. If burned, stay out of smoke.

GENERAL INFORMATION

Lorsban 4E-HF insecticide forms an emulsion when diluted with water and is systable for use in all conventional spray advanced.

GENERAL USE PRECAUTIONS

De not use on turf or for structural pest control. Do not formulate this product rite other and use products.

Attenson. Do Not Cut or Weld Container.

MIXING DIRECTIONS

To prepare the spray, add a portion of the required amount of water to the spray tank and with agreeon add the Lorsban 4E-

HF. Complete filling the tank with the belance of water needed, Maintain sufficient agretion during both mixing and application to ensure uniformity of the spray mixture.

Lorsban 4E-HF may also be used ir. tank mixtures with certain herbicides and/or with non-pressure fertilizer solutions as recommended under specific crop use directions. Note that Lorsban 4E-HF may be inactivated by sulfur containing fertilizer solutions. Prepare tank mixtures in the same manner as recommended above for use of Lorsban 4E-HF alone. When tank mixtures of Lorsban 4E-HF and herbicides are involved, add wettable powders first, flowables second, and emulsifiable concentrates last. Where a fertilizer solution is involved, it is strongly recommended that a fertilizer posticide compatibility agent such as Unite or Compex be used. Maintain constant agitation during both mixing and application to ensure uniformity of the spray mixture. Do not allow spray mixtures to stand overnight.

Note: Test competibility of the intended tank mixture before adding Lorsban 4E-HF to the spray or mix tank. Add proportionate amounts of each ingredient to a pint or quart jar, cap, shale, and let set 15 minutes. Formation of precipitates that do not readily redisperse indicates an incompatible mixture that should not be used.

SPRINKLER VARIGATION

Lorsben 4E-HF may be applied by sprinker irrigation for the following crop uses: affalfa, citrus orchard floors, field corn, popcorn, sweet corn, cotton, cranberries, sorghum, and soybeens.

See the use sections for the individual crops for further application information. Do not apply this product to the above listed crops through any other type of irrigation system. Do not apply this product by chemigation to any other crop.

Special Use Directions

The following use directions are to be followed when Lorsben 4E-HF is applied through sprinkler irrigation systems. Thoroughly clean the injection system and tank of any fertilizer or chemical residues, and dispose of the residues according to to and lederal laws. Flush the injector with scap and wi Determine the amount of insecticide needed to cover the desired acreage. Pump the required Lorsban 4E-HF into a steel tark, start mechanical or hydraulic agitation, and add in order the non-emulsifiable oil and/or water. Continually agitate the mixture containing Lorsban 4E-HF. Set the sprinkler system to deliver the desired inches of water per acre. Start the water pump and sprinkler, and let the system achieve the desired pressure and speed before starting the injector. Start the injector and calibrate the injector system according to number 14 in "Special Use Precautions" section. The mixture containing Lorsban 4E-HF must be injected continuously and uniformly into the irrigation water line as the springler is moving. This procedure is necessary to deliver the desired rate per acre in a uniform manner. When the application is finished, low the entire impation and injector system to be thoroughly funhed clean before stopping the system.

Special Use Precautions

The following use precautions will result in a safe and successful application of mutures containing Lorsban 4E-HF

- Apply this product only through sprnifer impason systems including center pivot, lateral move, end tow, side (wheel) roll, traveler, big gun, solid set, micro sprnitter, or hand move. De not apply this product through any other type of impation system.
- Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from nonuniform distribution of treated water
- 3 If you have questions about calibration, you should contact state extension service specialists, equipment manufacturers or other experts

ë

BEST AVAILABLE COPY

- Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system.
- A person knowledgeable of the chemigation system and responsible for its operation, or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.
- 6. The system must contain a functional check valve, vacuum relief valve, and low pressure drain apprepriately located on the irrigation pipeline to prevent water source contamination from backflow. Refer to the American Society of Agricultural Engineer's Engineering Practice 409 for more information.
- The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.
- 8. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- The system must contain functional interlocking controls to automatically shut off the pesticide injection dump when the weter pump motor stops.
- 10. The arrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where posticide distribution is adversely affected.
- 11. Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of meterials that are comp. "Is with postcides and capable of being fitted with a system interlock. The metering pump must provide a greater pressure than that of the intigation system at the point of injection. The pump must meet Section 675 for "Electrically Driven or Controlled Irrigation Machines" NEC 70 and must contain Viton or Tellon seals.
- 12. To insure uniform mixing of the insecticide into the water line, inject the mixture through a nozzle placed in the fertilizer injection port or just ahead of an elbow or tee in the irrigation line so that the turbulence cruated at those points will assist in mixing. It is suggested that the injection point be higher than the insecticide tank to prevent siphoning.
- 13. The steel tank holding the insecticide mixture should be large enough to allow the system to complete a revolution with one filling. It should be free of rust, fertilizer, sectionent, and foreign meterial, and equipped with an in-line strainer squeted between the tank and the injector gump.
- 14. In order to calibrate the irrigation system: and injector to apply the mixture containing Lorsban 4E-HF, determine the following: 1) Calculate the number of acres irrigated by the system, 2) Set the irrigation rate and determine the number of minutes for the system to cover the intended treatment area, 3) Calculate the total gallens : insecticide mixture needed to cover the testing safety. Divide the total gallons of insecticide mixture needed by the number of minutes to cover the treatment area. This value equals the gallons per minute output that the injector must deliver. Convert the gallons per minute to millitars or eurose per minute. Calibrate the injector pump with the system in operation at the desired irrigation rate. It is suggested that the injector pump be calibrated at least twice before operation, and the system should be manitored during operation.
- 15. Do not apply when wind speed favors drift beyond the area intended for treatment. End guns must be turned off during the application, if they impate nontarget areas.
- De not allow unigneon water to collect or runoff and pose a hezard to livestock, walls, or adjaining crops.
- 17 Allow foliage to dry before reentering the field.

 Do not apply through sprinkler systems which deliver a low coefficient of uniformity such as certain water drive units.

Approved Crops

Alfalfa

Use Lorsban 4E-HF to control the following pasts at the dosages indicated by application as a broadcast, follar scray:

Peak	Lorshop 4E-HF
Aphide (suppression)	1/2 pint/acre
Com rootwarm adults (spotted oucumber beetle) Grasshoppers	1/2 - 1 pint/acre
Allafa blotch leaf miner Allafa blotch leaf miner Allafa weevil larvae and adults Armyworms Cuttrorms Egyptian attaffa weevil larvae and adults Plant bugs Leafhoppers Spittlebugs	1 - 2 pints/acre

Nete: Use higher rates to control spotted affalfa aphid in California ar.J Nevada. Stubble spray may be applied to control teafhopper in the Northeast.

Mix the required dosage with enough water to ensure thorough coverage of crop foliage and apply using eurial (Exad-wing or helicopter) or power-operated ground spray equipment. For serial application use 2 to 5 gallons of water per acre. For best coverage when using ground application, a minimum of 20 gallons of water per scre with hollow cone nozzles is commended. Control may be reduced at low spray volumes under high temperature and wind conditions. Treat when field counts or crop injury indicates that damaging past populations are developing or present; however, do not apply more than ance per crop cutting. Some reduction in insect control may be evident under excessively coal conditions. For Egypeen alfalfa weevil control in California, apply the specified dorage in a minimum of 5 gallons of water per acre when larvae are actively feeding and populations reach 15 to 20 tr./vee per 180° resp with a 15-inch diameter net.

Lorsban 4E-HF may also be applied through sprinkler irrigation systems as a posterrorpenor broadcast application to control the above fisted foliar posts. For best results, use the recommended rate of Lorsban 4E-HF per acre. Maintain vigorous tank agitation to assure uniformity of the application throughout the injection period. See "Sprinkler Irrigation" section for further information.

Lorsban 4E-MF should not be tank mixed with posticides, surfactants, or fertilizer formulations unless prior use has shown the combination noninjurious under your current conditions of use. Some phytotoxic symptoms may be observed on young, tender rapidly growing affails when treated with Lorsban 4E-MF. Alfalls will outgrow the symptoms and no yield loss should be expected.

This product is highly toxic to bees exposed to direct treatment on attatle. Do not apply if nearby bees are clustered outside of hives and bees are foraging. Protective information may be obtained from your agricultural enteneon service.

Floatrictions: Do not cut or graze treated alfalls within 7 days after application of 1/2 pint of Lorsben 4E-HF per acre, within 14 days after application of 1 pint per acre, or within 21 days after application of rates above 1 pint per acre. Do not make more than 4 applications per year or apply more than once per crop duting.

<u>Asparagus</u>

Use Lorsban 4E-HF to co. Irol cutworms, asparagus aphids, and asparagus beedes by application at the rate of 2 pints paracre. Mix the specified dosage in sufficient water to ensure thorough coverage of treated plants and apply as a broadcast, foliar spray. For cutworms, it is preferable to apply Lorsban 4E-HF when the soil is moist and worms are active on or near the soil surface. Applications may be made during the fem stage for control of exparagus beedes and asparagus aphids when field counts or crop injuly indicates that damaging pest populations are developing or present.

Restrictions

Do not make more than one preharvest application per season or apply within one day of harvest. Do not make more than two postharvest applications during the fem stage. Based on available residue data, the use of Lorsban 4E-HF on apparague is limited to the Michrest and Pacific Northwest.

Cherries

Use Lorsban 4E-HF for the control of lesser peach tree borer, greater peach tree borer, and American plum borer by application as a trunk spray. Mix 1 1/2 to 3 quarts of Lorsban 4E-HF with 100 gallons of water and apply as a coarse, low-pressure spray to give uniform coverage of tree trunks and lower limbs. Make a second application two weeks after the first one and a third application after harvest. Avoid contact with foliage in sweet chemies as premature leaf drop may result. Consult your state agricultural experiment station or extension service specialist for proper time to treat in your area.

In addition, one of the three allowable applications per year may be applied as a dormant spray for control of San Jose scale, peach twig borer, and climbing cutworms. For control of these pests, tank mix 1/2 to 1 pint of Lorsban 4E-HF with 1 to 2 gallons of a petroleum oil recommended for dormant use in 100 gallons of water and spray the entire tree by application to runoff using ground spray equipment. For low volume (concentrate) aprays (40 to 100 gallons of spray mixture per acre) use the same amounts of Lorsban 4E-HF and spray oil per acre required for application as a dilute spray and apply in a manner that will ensure thorough coverage of the trees. Use the higher dosage of Lorsban 4E-HF for severe infrastations. Use oil as re-immended by your state agricultural experiment station or extension survice specialist.

Restrictions

Make only three applications per year. Do not apply within 6 days before hervest. Do not allow meet or dairy enimals to graze in treated orchards.

Christmas Trees (Nurseries and Plantations)

Use Lorsban 4E-HF at the rate indicated to control the following insects on the tree varieties listed.

Restrictions

Use Lorsben 4E-HF on tree plentations only in Connecticut, Meirie, Meryland, Massachusetts, Michigan, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee, Vermont, Virginia, Washington, and Wisconsin.

Do not allow livestock to graze in treated areas.

Tree Variable	Inneste Controlled	Drange Larebon St. 15	
Balant fr Blue spruce Concolor fr Douglas fr Eastern when pine Fraser fr	Aria Aphido Adelgido (Costey) (Eastern service galf) European jame stately European jame stately		De ret treat plants under entreme heet and drought etress. Apply to fekage in sufficient water to cinque adequate enremite.

For effective control of adult spider mises of eggs are present, apply a second spray 7 - 10 days after initial vestment to control newly hasched nymphs. 2. For scale control apply when scale crawlers are active.
	Pales would	39V100 gel	Apply as a cut stump- dranch.

Citrus Fruits

Use Lorsban 4E-HF at the rates indicated according to the designated geographic area to control the following pests. Use the lower rates for light infestations and increase the desage for heaver infestations.

A petroleum spray oil recommended for use on citrus trees may be added to dilute spray mixtures only at a rate of up to 1.8 gallons per 100 gallons of water to improve control of aphids, meety bugs, scale insects, and thrips. Treat when insects become a problem or in accordance with the local apray schedule recommended by your state extension service specialist.

Loreban 4E-HF may be applied in tank mixtures with ethion, dicofol, or Vendex. See "Mixing Directions" for further instructions. Fleed and carefully follow at applicable directions, restrictions, and precautions on labeling for the other products used in combination with Loreban 4E-HF.

Precautions

Observe local use directions for tank mix combinations especially in regard to applications of Lorsban 4E-HF plus agray all. Consult with a county farm advisor, county agency, extension service personnel, agricultural commissioner, pest control advisor, or local DowElanco representative for such information regarding a given locality.

Do not apply when trees are stressed by drought or high temperatures.

Lorsban 4E-HF should not be tank mixed with Difolatan 80 Sprills as crop injury may occur.

Lorsban 4E-HF is highly toxic to bees exposed to direct treatment and should not be applied when bees are actively visiting the area. During the bloom period in California, apply from one hour after sunest until two hours before sunnise.

Restrictions

Do not apply more than 2 applications or more than 15 pints of Lorsban 4E-HF per acre per year. Do not make second foliar application within 30 days of the first application. Do not treat within 21 days of harvest for applications up to 7 pints of Lorsban 4E-HF per acre nor within 35 days for application of rates above 7 pints per acre. Do not do any work involving contact with trees within 2 days after treatment. Do not allow livestock to graze in treated areas

Citrus Orchard Floors

Use Lorsban 4E-HF to control red imported fire ants and other ant species by applying the specified dose in 25 or more gallons of water with ground application equipment that will uniformly apply the spray to the orchard floor. To control foraging ants and suppress mounds, apply Lorsban 4E-HF to the orchard floor at the rate of 3/4 to 1 quart per acre. Retreat as needed. For best insect control, uniform coverage of the orchard floor is necessary. Do not apply where weed growth or other obstructions would impede uniform coverage of the orchard floor. Do not apply in tank mixtures with Evik herbicide. Foliar applications of Lorsban 4E-HF may be made in addition to the orchard floor treatments.

Lorsban 4E-HF may also be applied to citrus orchard floors through sprinkler irrigation systems only if the system uniformly covers the soil surface at the base of the tree. For best results, use the recommended amount of Lorsban 4E-HF per acre. See "Sprinker Impation" section for further information.

Restrictions

Do not apply more than 10 quarts of Lorsban 4E-HF per acre per season. Do not apply last treatment within 28 days before harvest. Do not allow livestock to graze in treated areas. In Flande, de not make more than 3 esclications per season.

Cranberries

Use Lorsban 4E-HF by application as a broadcast, foliar spray to control brown sperworm, cranberry fruitworm, cranberry weevil, cutworms, fireworms, and Sparganothis fruitworms at the rate of 3 pints per acre. Mix the specified docage in enough ter to ensure thorough coverage and apply no less than 5 gallons of spray per acre when using aerial equipment or no less than 100 gallons of spray per acre when using ground equipment. For weevil control, apply once at flower bud development (late May, early June) and, if weevils are present, once after 100% bloom (early to mid July). For other insects, treet when field counts indicate damaging insect populations are developing or present. Apply only after the winter flood has been removed. To avoid pesticide contamination of flood waters, make no applications while bogs are flooded.

Lorsban 4E-HF may also be applied through sprinkler imigation systems to control the above listed pests. For best results, use the recommended rate of Lorsban 4E-HF per acre. Maintain vigorous tank agitation to assure uniformity of the application throughout the injection period. See "Sprinkler Irrigation" section for further information.

Rescrictions

Do not make more than two applications per year or apply within 60 days before harvest.

Field Corn, Poposin, Bweet Corn

For use to control cutwerms, armyworms, com earworm, com rootworm adults, chinch bugs, grasshoppers, wireworms, fee beets lerves and adults, aphids, billbugs, grubs, western been cutworm, ourn borers, symphylens, common stalk borer, and lesser cornstalk borer.

Presient Incorporation Treatment

Use Lorsban 4E-HF at the following rates by application in sufficient water to the soil surface and incorporate into the soil:

Pasta	Lerahen 4E-HF
Cutworms Symphyten	2 · 4 prote/acre
Wifeworms Billbugs Fles beede larvee Grube Seed corn maggots Seed corn beede	4 pints/acre
Lesser cornstell borer Com rootworm larvae	6 pints/ecre

Note: For suppression of nematodes in North Carolina, South Carolina, and Virginia, apply 4 to 6 pints of Lorsban 4E-HF per

Use recommended rate in not less than 10 gallons of water per acre and apply as a broadcast spray to the soil surface using suitable power-operated ground spray equipment. On the same day of treatment, incorporate the insecticide into the too 2 to 4 inches of soil using a disc, field cultivator or equivalent equipment

Lorsban 4E-HF may also be applied in tank mixtures with nonpressure ferblizer solutions and/or with Bladex, Eradicane. Sutan, Lasso, Dual, and atrazine herbicides. See 'Mixing Directions' section for further information. Read and carefully follow all applicable directors, restrictions, and preceutions on labeling for the other products used in combination with Lorsben 4E-HF.

Proplant, At-Plant or Proemergence Treatment In

Conservation Titlage
Use Lorsben 4E-HF at the following rates by application in sufficient water to surface trash and exposed soil:

Casta	Loraban 4E-HF
Cutworms	1 - 2 pints/acre
Armyworms	

Use recommended rate in not less than 20 pallons of water per acre and apply as a broadcast spray using suitable poweroperated ground spray equipment. Use higher rates for residual control.

Lorsban 4E-HF may also be applied in tank mixtures with nonpressure fertilizer solutions and/or with paraquet and Roundup. See "Mixing Directions" section for further information. Reed and carefully follow all applicable directions, restrictions, and precautions on labeling for the other products used in combination with Lorsban 4E-HF.

Cultivation Time Treatment

Use Lorsban 4E-HF at the rate of 2 pints per acre to control corn rootworm larvae. Apply Lorsban 4E-HF as a water emulsion on both sides of the row at the base of the plants just ahead of the cultivator shovels. Cover the insecticide with soil around the brace roots. The best time to apply a basal treatment of a soil insecticide with cultivation is near the beginning of egg hetch. A cultivation application of Lorsban 4E-HF may be made in addition to an at planting application of Lorsban' 15G granular insecticide.

Postemergence Treatment

Use Lorsban 4E-HF at the following rate by application in sufficient water to ensure thorough coverage of treated plants:

Pests	Lorobon 4E-HF
Grashoppers	1/2 - 1 pinVacre

Insert 1.

1 1/2 to 2 pints per acre when application is made with poweroperated ground and aerial equipment and 1 to 2 pints per acre when application is made through a sprinkler impation system.

Treet when field counts indicate that pests are or may become a problem. For best billbug, chinch bug, and field beetle control, apply with sufficient water to ensure a minimum spray volume of 20 to 40 gallons per sore and 40 pei using ground apply equipment. On corn less than 6 inches tall, apply the insecticide spray in a 9 to 12 inch wide band over the row. On corn greater than 6 inches tall, apply the insecticide spray using drop nozzles directed to the base of the plant. Do not reduce the dosage for banded or directed applications. Concentrate the full labeled dosage rats in the treated zone. When chinch bugs continue to immigrate to corn over a prolonged period or under extreme pressure, a second application of Lorsban 4E-HF may be needed.

For cutworm, webwarm, western been cutworm, armyworm, aphid, European and southwestern com borer, grasshopper lesser cornstalk borer, com rootworm adult, com earworm, and common stalk borer control, apply as a broadcast spray using either serial (fixed-wing or helicopter) or power-operated ground spray equipment. For serial application use 2 to 5 gallons of spray per sore. Control may be reduced at low spray volumes under high temperature and wind conditions. For cusworms, it is preferable to apply Lorsban 4E-HF when soil is moist and worms are active on or near the soil surface. If ground is dry, cloddy or crusty at time of treatment, worms may be protected from the apray and effectiveness will be reduced. If such conditions exist, shallow incorporation using a rotary has ar other suitable equipment immediately before or soon after treatment may improve control. Consult your agricultural experiment station or extension service specialist for additional information concerning control practices in your area. For webworm control, shallow incorporation using a rotary hoe or other suitable equipment immediately before or soon after treatment is necessary. For first-generation European comboner control, treat when 25 to 50 percent of the complents show pinhole feeding or leaf-feeding scars. Ground applications should be directed into the corn whorls. For second-generation European com borer control, treat when field counts of egg masses indicate pasts are or may become a problem. For southwestern com barer control, treat when field counts of egg masses indicate posts are or may become a problem. A second application may be applied 10 to 14 days leter, if needed due to reinfectation. For common stalk borer control, treat approximately 11 days after application of Roundup herbicide or after complete burndown with personal herbicide (3 to 5 days). Do not use Lorsban 4E-HF in combination with the burndown herbicide for control of common stalk borer.

Lorsban 4E-HF may also be applied through aprinkler irrigation systems as a pestamorgance broadcast application to control the above fisted feller ineacts. For best results, use the recommended rate of Lorsban 4E-HF in a tank mix with 2 pints per acre of non-emulsifiable oil. Maintain vigorous tank agitation to assure uniformity of the Lorsban 4E-HF plus oil mixture throughout the injection partial. Lorsban 4E-HF may also be applied through agrinted irrigation systems at the rate of 2 to 3 pints per acre to central com receiverm larvae. Time application to coincide with the appearance of the second instar larvae. Maintain vigorous tank agitation to assure uniformity of the application throughout the injection period. Apply with enough water to wet the rest zone to the depth control is needed. Under saturated seil conditions, allow enough soil drying to occur se that an application university extension personnel or other experienced consultants to determine the need to treat and to application timing. See "Sornbier impation" secon for further information.

Restrictions

Do not apply within 35 days before harvest of grain. Do not apply more than a total of 15 pints of Loreban 4E-HF per acre per season. Do not allow livestock to graze in treated areas nor harvest treated com slage as feed for meet or deiry animals within 14 days after last treatment. Do not feed treated com lodder to meet or deiry animals within 35 days after last treatment.

Sweet Corn Grown Only in Florida and Georgia

Use Lorsban 4E-HF to control intestations of best armyworm, fall armyworm and corn earworm by application as a broadcast, foliar spray at the rate of 1 to 2 pints per acre. Mix the specified dosage in enough water to ensure thorough coverage and apply using suitable serial or ground spray equipment. For serial application, use at least 2 gallons of spray per acre. Treat when field counts indicate damaging pest populations are developing or present. Fle-treat as necessary to maintain control but do not apply more than twenty-two 1-pint or eleven 2-pint treatments per season.

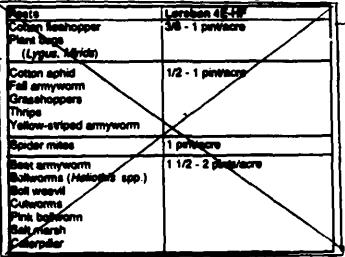

London 4E-HF may also be applied through sprinkler irrigation systems as a postemergence broadcast application to control the above listed foliar insects. For best results, use the recommended rate of Lorsban 4E-HF in a tank mix with 2 pints per acre of non-emulsifiable oil. Maintain vigorous tank agitation to assure uniformity of the Lorsban 4E-HF plus oil mixture throughout the injection period. See "Sprinkler Irrigation" section for further information.

Restrictions

Do not apply more than 22 pints of Lorsban 4E-HF per acre per season. Do not hervest corn ears, allow livestock to graze in treated areas, nor feed treated silege, fodder, or grain to meet or deiry animals within 21 days after treatment. Do not use in conjunction with postplant broadcast, foliar applications of Lorsban 15G.

Cotton

Use Lorsban 4E-HF for control of the following pests in all states except Arizona and California at the decages indicated:

Note: The recommended disage rate of 346 pirit per sore will not achieve the high degree of control of the higher label rate, but will reminize the damage done - stant thate and cotton fleehopper and allow the beneficial inselfs to survive, build up, and be available to aid in the control of bellworms infesting cotton.

Use Lorsban 4E-HF for control of the following peets in Anzona and Cathornia at the dosages indicated:

BEST AVAILABLE COPY

Facts

Lorsben 4E-HF

Armywagns
Cotton aprild.
Cotton fleshoppes
Lygus
Salt marsh caterpillar
Thrips

Bollworms (Heljedis spp.)
Boll weevel
Cutwooms
Pint bollworm

Note: The 2 pint rate will aid in the suppression of cotton leafperforator and spider mites.

Mix the required dosage with sufficient water to ensure thorough coverage of plants and apply using serial or power-operated ground spray equipment. For serial application, use at least 1 gallon of spray per acre. Treat when field counts indicate damaging insect populations are developing or present. Re-treat as necessary to maintain control.

Lorsban 4E-HF may also be applied through aprinkler lirigation systems as a postemorgence broadcast application to control the above listed foliar pasts. For best results, use the recommended rate of Lorsban 4E-HF per acre. Maintain vigorous tank agitation to assure uniformity of the application throughout the injection period. See "Sprinkler Irrigation" section for further information.

For effective control of spider mites when large numbers of eggs are present, apply a second spray 3 to 5 days after initial treatment to control newly hatched nymphs.

For best results on belimenne, it is suggested that fields be seewed twice per week and treatments made when worms are 1/4 inch or less in length. The following table illustrates the size of worms in relation to age and stage of development (instar) as a guide to timing of treatments for best control.

From the table it can be seen that a scouling schedule of only once per week will not be satisfactory since the worms may be too big to control effectively by the seventh or eighth day.

Timing for the Best Worm Control

Gal the warms at this stage	Ago(dayo) Hatah 3 5 6	9/30 9/32* 9/32* 7/16* 11/16*	Instar Hatch B C
1/16" - 3/32" - 9/32" - 7/16" -			

Proper application techniques help to ensure thorough spray coverage and correct desage and are thus important in obtaining good control of pests. Consider these suggestions when applying Lorsban 4E-HF on cotton.

Aeriel Application

Shorten boom length to avoid apray entering the vortices at the wing tipe. Swigh width should be reduced when wind direction is the same as direction of spraying.

The proper nazzle arrangement and sweth width to avoid skips and vorsces effect can be checked out by flying over a paper tape (adding machine paper) using water with or without soluble dye (The dye gives a permanent record.)

Flying at a height of 5 to 15 feet above the target results in the best coverage.

Nozzle orientation of the boom is important. More break-up occurs when nozzles are pointed straight down versus the straight back position. Desired droplet size (100 to 200 microns) can be obtained by angling the nozzles somewhere in this range.

Marking of swath by flagging or permanent markers is

Ground Application

Orient the boom and nozzles so that uniform coverage is obtained. The swath width should not be wider than the boom; drift spray is wasted spray so do not depend on it. Use flet fan or disc-core hollow cone nozzles with maximum specing of 20 inches and a spray pressure of 40-60 psi with a droplet size of 100 - 200 microns.

Restrictions

De not apply within 14 days before harvest. De not allowknoppel: to graze in treated areas. De not lood gin bash or treated tarage to livestock.

Loreban 4E-HF may also be used in tank mixtures in all states to control armyworms, bollworms (Heliothis spp.), boll weeval, obtain fleshopper, plant bugs (Lygus, Mirids), and spider miles as indicated in the following table.

Tonk Wixture	RetelAcre
Loraben 4E-HF	1 - 2 pints
plus Ambush 2E	plus 1/5 - 2/5 pint
onten 4E-RF	1 - 2 pints
plus Pounce 3.2E	plus 1/8 to 1/4 pint
Loreben 4E-HF	1 - 2 pints
plus Pydrin 2.4E	plus 1/6 - 1/3 pint
Loreben 4E-HF	1/2 - 1 pint
plus Boister &E	plus 2/3- 1 1/3 pints
Loreben 4E-HF	1 pint
plus methyl parathion†	plus 0.6 lb a.i.
Plus EPN†	plus 0.6 lb a.i.

†Use only emulsifiable formulations containing these active ingredients (a.i.).

Mix the tank mixture components in sufficient water to ensure thorough coverage of plants (at least 1 gallon of spray per acre) and apply using solut spray equipment. Treat when field counts indicate demanding insect populations are developing or present. Re-treat as necessary to maintain control.

In California and Arizona, use Lorsban 4E-RF at 1 to 2 oints per acre plus Monitor 4E at 1 to 2 pints per acre or Lorsban 4E-HF at 1 to 2 pints per acre plus Orthene 755 at 0.33 to 1 3 pounds per acre for control of armyworms, both rollins, cabbage looper, cytton aphids, cotton fleahor per, cutworms, grasshopper, omniverous leafroller, pink bollworm, plant bugs (Lygus, Méride), saltmarsh caterpillar, thrips, and with telly (suppryssion). Apply in 10 to 25 gallons of water per aire with ground sersy equipment or in 5 to 10 gallons of water per acre with serial spray equipment. Treat when field counts indicate that damaging insect populations are developing or present. For tent mixtures which include Monitor 4E, apply before 86 percent of the bolls have opened. Re-treat as necessary to maintain control.

Restrictions

Make no applications of Physic Lenk mustures closer to hervest than the longest pre-francest interval above for any of the products in the tank musture. Do not allow the stock to graze in

Do not apply within 14 days before harvest or make more than applications per season. Do not allow livestock to graze in treated areas. Do not feed gin trash or treated forage to

Delete

Leroban' 4E-HF

treams areas. Do not feed gin trash of tracted forage to livestock. Workers on the Sugar Success of within 48 hours after application should wear protective clothing.

Use Lorsban 4E-HF at the rate of 2 quarts per acre for control of dried fruit beede by application in sufficient water to the soil surface followed by incorporation into the top 3 inches of soil. Apply to fig orchard soil as a dormant application in late winter pnor to beede emergence and prior to leaf formation.

Restrictions

Make only one application per year. Do not apply within 7 months of hervest. Besed on available residue data, use of Lorsban 4E-HF on figs is restricted to California.

Grapes

Use Lorsban 4E-HF for control of grape root borer by application just before the pest emerges from the soil. Mix 4 1/2 pines of Lorsban 4E-HF with 100 gallons of water and apply 2 quarts of the diluted spray mixture to the soil surface on a 15-square foot area around the base of each wine. Do not allow spray to contact fruit or foliage.

Restrictions

Do not make more than one application per season or apply within 35 days before harvest. Based upon available residue data, the use of Lorsban 4E-HF in grapes is restricted to states east of the Rocky Mountains.

Mint

Use Lorsban 4E-HF by application as a broadcast, frier spray to control cuttingmis at the rate of 2 to 4 pints per acre and mint root borer at the rate of 4 pints per acre. Mix the specified dosage in water to give no less than 10 gallons of spray per acre and apply using ground spray equipment. For cutworm control, treat during May and June when field counts indicate damaging insect populations are developing or present. When larvee are less than 3/4 inch in length, use the 2 pint rate. When larvee are 3/4 inch or more in length, use the higher rate. Make only one application during the growing season. Do not apply within 90 days before harvest. For mint root borer control, apply post-harvest when field counts indicate demaging insect populations are developing or present. Follow treatment with approximately 1 acre inch of sprintler irrigation immediately after application to incorporate the insecticide into the soil. Make only one post-hervest application per season.

Nectarines, Pezches

Use Lorsban 4E-PF for the control of peach tree borers by application as a trunk spray before newly hatched borers enter the trees. Mix 3 queris of Loreban 4E-HF with 100 gallons of water and apply its a operae, low-pressure spray to give uniform coverage of the stunks. Theroughly wet all bank areas from ground level to seaffeld limbs. Do not allow spray to contact fruit. Consult your state agricultural experiment station's or extension service specialist's written recommerciations for prepar time to treat in your area.

Lorsban 4E-HF may also be used as a preplant dip application for non-bearing peach trees at the equivalent application rate of 3 quarts per 100 gallone of water for control of peach tree borer. Die trees several inches above the grafting bud scar and plant immediately or allow to dry before returning to storage. Do not allow peach trees to remain in contact with the dig

Restrictions

Make only one application per season. Do not apply within 14 days before harvest. Do not allow meat or dairy animals to graze in treated orchards

Onlons (Dry Bulb)

Use Lorsban 4E-HF to control onion magget by application as an in-furrow drench. Apply Lorsban 4E-HF at the rate of 1.1

fluid ounce per 1000 linear feet of row at an 18-inch row spacing. Use a minimum of 40 gations of total drench per acre. Incorporate to a depth of 1 to 2 inches.

Do not make more than one application per year.

Peanuts

tise Lorsban 4E-HF for control of lesser cornstalk borer by application as a directed spray to the base of the plants in an \$ to 10 inch band. Apply Lorsban 4E-HF at the rate of 2 to 4 pints per acre when field counts indicate damaging insect populations are developing or present. Mix the required dosage in enough water to ensure thorough coverage. Do not apply as a foliage application.

Restrictions

Do not make more than one application per season. Do not harvest within 21 days after treatment. Do not feed treated peanut forage or hay to meat or dairy animals.

Sorghum

Use Lorsban 4E-HF Insecticide for control of the following posts at the dosages indicated:

Pasta	Leroben 4E-HF.	Specific Directions
Sorghum midge	1/2 pinVacre	Apply when 30 to 50% of the seed heads are in bloom, repeat at 3-day intervals if necessary.
Greenbugs Grasshoppers Yellow sugar cand aphid and other achids	1/2 - 1 pm///~re	
Chinch bugs Lesser comstalk borer	1 - 2 pints/acre	Apply as a directed spray toward the base of the plant using power-operated ground spray equipment with sufficient water to ensure coverage of an 8 to 12 inch band centered on the row. On plants loss than 6 inches high, apply an 8 to 12 inch band over the row. Do not rectude the dasage for banded or directed applications. Concentrate the full labeled dosage rate in the treated gone.
Webworn:s	1 pint/acre	
Armyworms Com eerworm Cunworms	1 - 2 nts/ecre	
European and Southwestern com borer	1 1/2 - 2 pints/acre	

Mix the specified docage in enough water to ensure thorough coverage and april using suitable serial or ground spray equipment. To me, mise chemical injury, do not apply Loraban 4E-HF to drought stressed grain sorghum within 3 days following irrigation or rain except where the product is applied in irrigation water.

Lorsban 4E-HF may also be applied through sprinkler imigation systems as a postemergence broadcast application to control the above listed feliar pests. For best results, use the recommended rate of Lorsban 4E-HF per acre. Maintain vigorous tank agreeon to assure uniformity of the application throughout the injection period. See "Sprinkler Irrigation" section for further information.

Restrictions

The treeted crop is not to be used for grain, forage, fodder, hay, or silege within 30 days after application of 1 pint of Lorsban 4E-HF per acre or within 60 days after application of rates above 1 pint per acre. Do not treat sweet varieties of sorghum. Do not apply more than 3 pints of Lorsban 4E-HF per acre per season.

Soybeans

For use to control armywarms, been leef beetle, cam earworm, cutworms, European corn borer, grasshoppers, green clovenworm, lesser cornstalk borer, Mexican bean beetle, saltmarsh caterpillar and other woolly bears, southern green sank bug, spider mites, and velvetbean caterpillar.

Soil Treatment

Use Lorsban 4E-HF at the rate of 1 to 2 pints per acre to control cutworms and tesser correstalls borer. Mix the specified desage in a minimum of 10 gallons of spray per acre and apply to the soil surface using suitable ground spray equipment. Equivalent rates of insecticide spray required per 100 feet of row for various row specing are given in the accompanying table. For at-plant treatments apply the insecticide over the row in a 4 to 6-inch band in front of the planter shoe or press wheel or after the press wheel followed by a drag chain for light incorporation. Do not apply as an in-furrow treatment. For postemergence rescue treatments, apply as a directed spray in a 9 to 12-inch band at the base of the plant. To plants under 6 inches high apply over the top in a 6- to 12-inch band. Treat when field counts or conditions indicate that pests are or may become a problem.

Fluid Ounces of Spray Required Per 100 Feet of Row for Various Row Specing					
Volume of Sprey Per Acro	36"	32"	26"	34"	
10 gelone	8.0	7.9_	6.9	5.9	
15 gallons	13.2	11.8	10.3	- 1.1	
20 geline	17.6	15.7	13.7	11.0	

Foliar Treatment

Use Lorsban 4E-HF at the following rate by application in sufficient water to ensure thorough coverage of treated plants:

Page	Loroboo 4E-HF
Europeen com borer Southern green stink bug	2 pints/acre
Been isel beete Cutworms Corn servorm Seltnersh caterpiller and other woolly beers	1 - 2 pints/ecre
Mexican been beetle Armyworms	1 - 1 1/2 pints/scre
Velvetbean caterpiller Grasshoppers Green cloverworm Spider mites	1/2 - 1 pintlecre

Apply as a broadcast spray using either serial or ground equipment when field counts indicate damaging insect populations are developing or present; re-treat to necessary to maintain control. For effective control of spider mites when large numbers of eggs are present, apply a second spray 3 to 5 days after solid treatment to control newly-heathed nymphs. On determinate scybeans do not apply more than one application after pod set.

Lorsban 4E-HF may also be applied through sprinkler impason systems as a posternergence broadcast application to

control the above listed foliar peats. For best results, use the recommended rate of Lorsban 4E-HF per acre. Meintain vigorous tank agistion to assure uniformity of the application throughout the injection period. See "Sprinkler Imgation" section for further information.

Restrictions

Do not apply more than 6 pints of Lorsban 4E-HF per sore or 3 pounds of chlorpyrilos (active ingredient) per sore per season. De not apply last treatment within 28 days before harvest nor apply last two treatments closer than 14 days apart. De not allow fivestock to graze in treated areas or otherwise feed treated soybean forage, hay, and straw to meet or deiry animals.

Strawberries

Use Lorsban 4E-HF by application as a broadcast foliar spray to control strawberry bud weevil at the rate of 1 quart per acre. Apply in a minimum of 40 gallons of spray per acre when burts first appear and 10 to 14 days later. Do not apply after bernes start to form or when herries are present. Lorsban 4E-HF should not be tank mixed with pesticides, surfactants, or fertilizer formulations unless prior use has shown the combination noninjurious under your current conditions of use. Phytotoxicity may occur when Lorsban 4E-HF is applied to strawberries experiencing high temperature and drought stress.

Restrictions

For pre-bloom use only. Do not make more than two applications per season or apply within 21 days before harvest.

Sunflowers

For use to control cutworms, sunflower beetle lervae and adults, stem weevil, sunflower moth, bended sunflower moth, woolly beers, seed weevil and grasshoppers.

Preplant Incorporation Treatment

Use Lorsban 4E-HF at the following rates by application in sufficient water to the soil surface and incorporate into the soil:

Posts	Lorobon 4E-HF
Cutworms	2 - 4 pints/acre

Use recommended rate in not less than 10 gallons of water per acre and apply as a broadcast spray to the soil surface using suitable power-operated ground spray equipment. On the same day of treatment, incorporate the insecticide into the to: 2 to 4 inches of soil using a disc, field cultivator or equivalent equipment.

Postemergence Treatment

Use Lorsban 4E-HF for control of the following peets at the desage indicated by application in sufficient water to ensure thorough coverage of treated plants:

Poots	Leroben 4E-HF
Culwarine	2 - 3 perts/acre
Sunflower beede larvee and adults	
Stem weevil	
Bunfawer moth Banded sunflower moth	
Woolly beers Seed weevil	1 - 1 1/2 pints/acre
Grasshoopers	1 punt/acre

Apply as a broadcast spray using either sense (fixed-wing or helicopeer) or power-operated ground spray equipment when field counts indicate that posts are or may become a problem. For cuttorin control, it second treatment may be made 7 to 10 days later, if needed. For stem weevil centrel, optimal treatment time is within 5 to 7 days after adult weevils begin to appear. For sunflower moth control, make first application during early 1 to 5 percent bloom stage. A second treatment may be made 7 days later, if needed. For seed weevil control.

TEZ: WALLABIE COOM

Lorsben' 4E-HF

treat when field counts indicate there are 10 to 12 adults per plant for oil crops and 1 to 3 adults per plant on confectonary crops. Additional treatments should be made at successive 7 to 10 day intervals if field counts indicate need to re-treat. For sunflower beets larvae or adult control, treat when field counts indicate there are 10 larvae or 1 to 2 adults per seedling. Additional treatments may be made at successive 7 to 10 day intervals if field counts indicate need to re-treat.

Restrictions

Do not apply more than 9 pints of Loreben 4E-HF per sore per season. Do not apply within 42 days before harvest. Do not allow livestock to graze in treated areas.

Sugar Beets

Use Lorsban 4E-PF by application as a broadcast, foliar spray to control best armyworms at a rate of 1 1/2 to 2 pints per acre and cutworms at a rate of 2 pints per acre. Treat when field counts indicate that damaging insect populations are or may be a problem. Mix the specified dosage with 2 to 5 gallons of water per acre and apply using suitable aerial spray equipment or with 10 to 30 gallons of water per acre when using power-operated ground spray equipment. Re-treat as necessary to maintain control.

Restrictions

Do not apply within 30 days before hervest of beut roots and tops. Do not apply more than a total of 8 pints of Lorsben 4E-HF per scre per season. Do not allow livestock to graze in treated areas nor harvest treated best tops as feed for meet or days animals within 30 days after last treatment.

Sweet Potatoes

Use Lorsban 4E-HF to reduce the feeding damage caused by populations of Conderus inneworm. Systems flee beetle and the sweek potato flee beetle. Apply at the rate of 4 pints per acre as a broadcast (overall) spray to the soil surface followed by incorporation. Mix the specified dosage with enough water to obtain uniform coverage and acrity as a coarse spray using suitable ground spray equipmen. Incorporate the insecticide to a depth of 4 to 6 inches as soo. In possible after application by using a rotary hoe, disc cultivator, or other suitable incorporation equipment. Plant the crop in the usual manner no later than 14 days after treatment (any delay in planting will reduce the length of time that Lorsban 4E-HF will protect against feeding damage). Lorsban 4E-HF will not control false wireworms or white fringe beetle or other grubs that attack sweet potatoes.

Restrictions

Do not make more than one application per season. Do not harvest within 125 days of treatment.

Tobacco

Use Lorsban 4E-HF for preplent treatment to control lerves of cutworms, flee beetles, mole crickets, reet maggots, and wireworms. Apply 2 to 3 exacts of Lorsban 4E-HF per acre in not less than 10 gallons of water as a broadcast (overall) spray to the soil surface one week before transplanting, immediately following application, incorporate the insecticide into the soil to a depth of 2 to 4 inches using suitable equipment. The application of Lorsban 4E-HF will also suppress the movement of imported fire ants into treated fields.

To control the above insects and low to moderate populations of rootinat nemetodes in North Carolina, South Carolina, and Virginia, use Lorsban 4E-HF at the rate of 8 quarts per acre. To control the above insects and moderate populations of rootknot nematodes in all tobacco growing regions, use Lorsban 4E-HF in a tank mix with Nemecur 3 at the rate of 2 quarts of Lorsban 4E-HF plus 4 quarts of Nemecur 3 per acre. Read and carefully follow all applicable directions, restrictions, and prescutions on labelling for Nemecur 3 used in combination with Lorsban 4E-HF. Apply the specified disease in not less than 10 gallons of water as a broadcast (overall) spray to the soil surface 24 to 48 hours before bedding and transplanting. Immediately following application, increporate into the soil to a depth of at least 4 inches using surfable equipment. Where the nematinde species Fieldidegyne

arenans or M. javanics are present or high populations of M. incognite, apply Telone* II soil furnigant at the recommended label rate.

Restrictions

Do not make more than one application per season.

Tree Fruits

Use Loreban 4E-HF as a dominant or delayed dormant spray as the rates indicated to control the fellowing insects on the craps listed. White Loreban 4E-HF may be used without oil oil is recommended for additional past control.

recommended for additional pest control.			
Crop \	Ineact	Desige Lerption 4E-HF	
Apples	Rosy apple aphid San Jose scale Lygits Pandamia teatrclier Climbing authorms		
Pears	San Japa scale Climbing cutsorms Padr psydle adults	1/2 - 1 pint	
Plume Pruince	Sen Jose scale Meety plum aphid Climbing outworms Peach beig borer		
Almenda Paschee Nectarines	Sen Jose scale Peach twig borer Climbing outvorms		

Tank mix the specified dosage with 1 to 2 gallons of a perpleum spray of recommended for dormant use in 200 gallons of water and spray the entire tree by application to runoff using suitable ground spray equipment. (See Additional Precautions Specific to California' for use in California.) For low volume (contentrate) sprays (40 to 100 gallons of spray mixture per acre), use the same amounts of Lorsban 4E-HF and spray oil per acre required for application as a dilute spray and apply in a manner that half-misure thorough coverage of the trees. Use the higher dosage of Lorsban 4E-HF for severe infestations. Use oil as resommended by your state agnicultural experiment station of extension service specialist.

Precautions

Because cold or \$\tilde{c}\$ conditions may cause Lorsban-4E-HF plus oil aprays to influse trees resulting in bud damage or stop, do not apply until writter rains or irrigation has replenished and projecture such that bark and trigs are not decicated.

Additional Presentions Specific to California: Use a minimum of 250 gallons of total apray volume per sore. Do not use more than 4 pints of Lamban 45-HF-per-care. Do not use more than 4 gallons of spray oil per sore on almonds, peaches, or nectarines. Do not use any adjuvants or surfactants in addition to or as a substitute for a petroleum spray oil in a tank mix with Lorsban 4E-HF. Do not apply on almonds in the following counties in California: Butte, Colusa, Glenn, Soleno, Sutter, Tehama, Yolo, and Yuba.

Restrictions

Make only one application during the dormant season. Do not allow meet or deiry animals to grade in treated orchards.

Tree Nute

Use Livration 4E-HF at the disages indicated by application as a foliar apply to control purits listed in the following table. Mix the required disage in sufficient water to ensure thorough and complete coverage of the ciliage and crop and apply as a concentrate or disute agray using conventional, power-opa ated spray equipment. For disute agrays applied to tree nut crops, mix the required disage in sufficient water to allow for spray to runoff. For concentrate sprays, apply an equivalent amount of Lorsban 4E-HF per acre. Treat when pests appear or in accordance with local conditions. Insect control by sensi application may be less than control by ground application because of less coverage. Cansult your riste agricultural experiment station, control pest central advisor, or extension service specialist for specific use information in your area.

PECANS Use Loraban 4E-HF at the rates indicated to control the listed peets.		
Innecte Controlled	Decage of Laraban 4E-HF (Diffute or Consentrate) Plate/Acro	Remarks and Restrictions
Pecan nut casebearer Fall webworm	1 1/2 - 4	Make no more than five applications per assets. Do not apply within 20 days of
Physiowere spp.* Black pecan aphid Hickory shuckworm* Pecan leaf sourch muse (suppression)* Fire ants and other ant species*	2 · 4	harvest. Do not allow fivestock to graze in treated orchards. Make no applications of tank mixtures closer to harvest than the longest pre-harvest interval shown for any of the products in the tank mixture.
Yellow pecan aphid Black margined aphid	1 - 4 pints of Lorsban 4E-HF plus: 5.33 fl oz of Pydrin 2.4E, or 1.70 fl oz of Asana 1.9EC, or 3.00 fl oz of Ammv, 2.5 EC, or 2.56 fl oz of Cymbush 3E	For dilute applications with ground equipment use at least the minimum rate of Lorsben 4E-HF listed for the pest. Apply in 100 - 600 gallons of water per acre. For serial applications use 5 - 15 gallons of water per acre. Note: With serial application control may be reduced due to poor coverage. Up to 20 pints of Lorsban 4E-HF may be applied per acre per acres.

1 For best Phytouare app. control, make 2 applications at a 7- to 10 day interval using a minimum of 1.0 pint of Loraban 4E-HF ; at acre starting at bud swell.

For best results make 2 applications, 10 to 14 days apart.

To suppress pecan leaf scorch mits, use a preventative program.

4 For ant control, apply as an orchard floor agrey. Do not apply where weed growth or other obstructions prevent uniform coverage of the archard floor

Almond Orchard Floors

Use Lorsban 4E-HF to central southern fire ant and pavement ant by applying the specified dose with ground application equipment that will uniformly apply the apray to the orchard floor. Use when ant activity becomes evident within the orchard. Since worker ants coace meet of their foraging activity at temperatures above 90°F, best results will be achieved with applications made at temperatures below 40°F at the time of application. Decage of Larsban 4E-HF and spray volume may vary depending on the irrigation method application of the content of temperatures in the content of temperatures. employed in the orchard as follows:

Ant Control in Sprinkler- or Drip-irrigated

Apply Lorsban 4E-HF as a breadcast spray to the entire erchard floor using ground spray equipment at 4 to 8 pints per acre in 25 or more gallons of water. Use the high rate for heavy infestations and the low rate for light infestations. In orchards where ant activity is concentrated around the impason emitters, apply the high rose to a 6 to 8 feet band along the drip-impation line and the low rate to the rest of the **archard**

Ant Control in Flood-irrigated Orchards

Apply Loreban 4E-HF at 4 to 8 pints per acre in 25 or more gallons of water to the entire orchard floor using ground spray equipment. Apply the high rate to heavily intested areas and the law rate to lightly intested areas. Where ant colories are abundant only in the berm areas, apply Lorsban 4E-HF at 8 parts por treated acre in 50 or more gallons of water to a 6 to 10 foot band along the tren line (barm).

Do not apply where wood growth or other obstructions would impede uniform coverage of the orchard floor. Mow or chemically control weeds before the application of Lorsben 4E-HF. Feller applications of Lorsben 4E-HF may be made in addition to the orchard floor treatment.

Freetrictions

De not apply more than 16 pints of Loreban 4E-HF per gassanto the orchard floor do not apply the last treatment within 14 days of hervest. Do not allow livestock to graze in treated archards.

except Brussels sprout,

Vegetables

Use Loreban 4E-HF at the docages indicated to control the pests listed in the following table. To avoid physotoxicity in vegetables, do not mix with other posticide products or treat plants that are under extreme heat and drought stress.

C	Insects Centrolled	Leroben 4E-HF	Use Directions	Restrictions
Crea Cauliflower	Root meggot	1.6 - 2.4 fl oz/ 1000 linear ft of row	For direct seeded crape apply the	Do not apply more than 2 pints of Lorsban 4E-HF to
Braccoli Brussels spraus Cabbage Chinese cabbage Collerds Kale Kohirabi Turnips	Root maggot	1.6 - 2.75 fl oz/ 1000 linear ft of row	specified decage in a water-based spray as a 4-inch wide band over the row at planting time. Shallow incorporation is necessary. Placement behind the planter shoe and in front of the presewheel is recommen. ### 1. For transplanted orope, spriy Lorsban 4E-HF as a water-based spray directed to the base of the plants immediately after setting. Use a minimum of 40 galone of total spray per acre. Do not add any additional adjuvents, surfactants or spreader stickers. Do not application.	causitiower plented in 40 inch rows. Use proportional amounts for other row specings not to exceed 4 pints of Lorsban 4E-HF per acre. Do not apply more than 2.6 pints of Lorsban 4E-HF per acre to broccoli, brussel sprouts, cabbage, Chinese cabbage, collerds, liste, kohtrabi, and turnips planted in 40-inch rows. Do not apply more than 4 1/2 pints of Lorsban 4E-HF per acre to these crops in 20-inch rows (or two rows per bad).
Greccosi Cabbage	Root ephid	1.2 fl oz/1000 linear R of row for single row plantings, and 2.4 fl oz/1000 linear ft of row for double row plantings.	Apply Lorsben 4E-HF in a water emulsion or with liquid fartilizer injected as a sidedress on each side of the row after plants are established. Avoid mechanical damage to orap roots. Use a minimum of 15 gallons of total spray volume per acre.	harvest
Redehes	Root meggot	1.0 ft az/1000 linear ft af raw	Apply the specified dosage as a westr-based drench in the seed furrows with the seed at planting time. Use a minimum of 40 gations of total drench per scre.	Do not apply more than \$ 1/2 pints of Lorsbari 4E-HF per acre or make more than one application per season
Rytalogae	Rest magus	1.6 - 3.3 fl oz/1000 fineer ft of row	Apply the specified dosege in a water-based spray as a 4-inch wide band over the row at planting time, behind the planting time, behind the planter shoe and in front of the press wheel to achieve shallow incorporation. Use a minimum of 40 gallons of total spray volume per acre.	Do not apply more than 4 1/2 pints of Lorsban 4E-HF per sore or make more than one application per season. De not use rutabaga tops for feed or feed purposes.

HIN ET II LABEL

Label Revisions:

- 1. Added the phrase "Contains aromatic petroleum distillates" to ingredients section.
- 2. Added the phrase "Lorsban 4E-HF May cause skin sensitization reactions in certain individuals" to "Warning and Hazards" section.
- 3. Mint added to crops for application with sprinkler irrigation.
- 4. Apri-Mek added to tank mixes for citrus fruits.
- 5. Modified restrictions for citrus orchard floors.
- 4. Added "Corn grown for seed" to corn uses.
- 6. Cotton uses:
 - . Growing areas including Arizona and California "Bollworm" and "tobacco budworm" replace "Bollworms (Heliothus spp.)".
 - Number of applications to cotton limited to 5 per season.
 - All tank mix uses for cotton deleted.
- 7. Tree fruits: oblique banded leafroller added (apples); recommendations on use rates and apray volumes refined.
- 8. Pecans and Almond Orchard Floors: Restrictions edited.
- 9. Vegetables: Use directions on brussels sprout edited and put into a table format (changes based on previously approved label changes inadvertently omitted).

insert 3.

Lorsban 4E-HF may also be applied through aprinkler irrigation systems as a posternergence broadcast application to control the above listed pasts. For best results, use the recommended rate of Lorsban 4E-HF per acre. Mainiein vigorous tank agitation to assure uniformity of the application throughout the injection period. See "Sprinkler Irrigation" on page 6 for further information.

Incert 4.

Use Lorsban 4E-HF as a domaint or delayed domaint spray at the rates indicated to control the following insects on the crops listed. While Lorsban 4E-HF may be used without oil, oil is recommended to control additional pests such as European red mite.

Crop	Insect	Lorsban 4E-HF per 100 gallone of Spray ¹	
Apples	Rosy apply aphid San Jose scale Lygus Pandemis selfroller Climbing cutworms Oblique banded leafroller		
Pears	San Jose Scale Climbing cutworms Pear psylla adults	1/2 - 1 pint (Use a minimum of 1.5 pints/acre)	
Plume, Prunes	San Jose scale Mealy plum aphid Climbing cutworms Peach t vig borer		
Almonds, Peaches Nectarines	San Jose scale Peach twig borer Climbing cutworms		

Based on 200 to 600 gallons per acre as a dilute spray.

Insert 5.

For dilute aprays, tank mix the specified dosage with 1 to 2 gallons of petroleum spray oil recommended for dormant use in 100 gallons of water and spray the entire tree by application to runoff using suitable ground spray equipmens. (See "Additional Precautions Specific to California" (below) for use in California).

For low volume (concentrate) sprays, less than 200 gallons of spray mixture per acre, use the same amount of Lorsban 4E-HF as for a dilute spray and apply in a manner that will ensure thorough coverage of the trees. Use the higher dosage of Lorsban 4E-HF for severe infestations. Use oil as recommended by your state agricultural experiment station or extension service specialist.

Precautions

Because cold or dry conditions may cause Lorsban 4E-HF oil sprays to infuse trees resulting in bud damage or drop, do not apply until winter rains or irrigation has replenished soil moisture such that bark and twigs are not desiccated. Do not use more than 4 pints of Lorsban 4E-HF per acre.

Insert 6.

Crop	insects Controlled	Dosage Lorsban 4E-HF	Use Directions	Restrictions
Brussels sprouts	Armywor/ns Cabbags aphid Cutworms Import.d cabbagsworm Striped fies beetle (adult)	1 to 2 pints per acre	Apply Lorsban 4E-HF with conventional power-operated spray equipment in 20 to 150 gallons of water per acre. Apply when insects appear on foliage and at 7 to 14 day intervals thereafter as needed. Consult your state agricultural experiment station, extension service specialist, or integrated pest control advisor for proper time to treat in your area.	Do not make more than 6 applications per season. Do not apply within 21 days before harvest.
