Dear Mr. McMaster:

Subject: Revised Labeling - Add Use on Mung Beans
 Treflan HFP
 EPA Registration No. 62719-250
 Your Submission Dated November 17, 1998

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable with the following provisions:

- 1) Add a statement to inform the user that this product is for use on mung beans to be canned only.
- 2) Add a statement to instruct the user to rinse the beans thoroughly with fresh water. This statement should appear following the soaking period (step #2) and prior to sprouting and processing the beans (step #3).
- 3) Add the restriction "Do not feed treated hulls or bean parts to livestock."

A stamped copy is enclosed for your records. Please submit one (1) final printed copy for the referenced label, incorporating the above changes, before releasing the product for shipment.

Sincerely yours,

Joanne I. Miller

Supplemental Labeling

Dow AgroSciences LLC 9330 Zionsville Road Indianapolis, IN 46268-1054 USA

Treflan* HFP (EPA Reg. No. 62719-250)

Growth Regulator of Mung Bean Sprouts

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Treflan HFP before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Treflan HFP according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Treflan HFP.

Directions for Use

Treflan HFP (trifluralin) is recommended for use as a growth regulator of mung bean sprouts to enhance yield, quality and handling ease of the sprouted beans.

Soaking mung bean seeds in a solution containing Treflan HFP and PCPA (para-chlorophenoxyacetic acid) results in:

- * improved yield of mung bean sprouts
- * Improved quality
- * Greater handling ease
- * Processing advantages because the shorter plumper sprouts may be cooked in an agitated type of process without excessive tangling.

PROCEDURE

1. Prepare a solution of 31 ppm trifluralin, 1.6 ppm PCPA and water heated to 75° (±2°) F.

NOTE: To prepare a 31 ppm trifluralin treating solution, add 370 milliliters of Treflan HFP to 1,500 gallons of water.

2. Soak mung bean seeds from 5 to 8 hours in the Treflan HFP/PCPA solution, depending on the imbibing quality of the beans being treated.
3. Sprout and process beans by normal commercial methods.

**ACCEPTED
