## HOW IT WORKS

*Conserve\* fire ant bait* is attractive and deadly to fire ants. Fire ants quickly find/pick up this bait, take it back to the mound, and feed it to the entire colony including the queen(s). Ants start dying in 24-36 hours with mound/colony destruction in 3 to 14 days. Broadcast applications may take longer.

Fire ant colonies are started by newly mated queen(s) that fly into an area, burrow into the ground and begin laying eggs. Several flights are common during the summer, often shortly after rains. It takes several weeks for new mounds to appear. Combining mound and broadcast applications eliminates/controls visible mounds and helps prevent new mounds from forming.

## Storage and Disposal

**Storage:** Store in a cool dry place out of the reach of children and domestic animals. Store in original container only.

**If partly filled:** Call your local solid waste agency or 1-800-992-5994 for disposal instructions. Never place unused product down any indoor or outdoor drain. [Editor's Note: Supplemental distributor will insert own toll free number.]
