EPA Reg. No. 62719-322

Use of Hooded Sprayers in Sunflowers
(For Distribution and Use Only in the State of South Dakota)

ATTENTION

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Glyphomax* Plus herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Glyphomax Plus according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Glyphomax Plus.

Directions for Use

Avoid contact of herbicide with foliage, green stems, exposed non-woody roots or fruit of crops, desirable plants and trees, because severe injury or destruction may result.

Refer to the label booklet for Glyphomax* Plus herbicide for general information on product use, mixing, application equipment and techniques, labeled uses, and weed rate tables.

Recommendations

Glyphomax Plus may be used through hooded sprayers for weed control between the rows of sunflowers. Only hooded sprayers that completely enclose the spray pattern may be used.

A hooded sprayer is a type of shielded applicator. The spray pattern is completely enclosed on the top and all 4 sides by a hood, thereby shielding the crop from the spray solution. This equipment must be set up and operated in a manner that avoids bouncing or raising the hoods off the ground in any way. If the hoods are raised, spray particles may escape and come into contact with the crop, causing damage or destruction of the crop. The spray hoods must be operated on the ground or skimming across the ground. Tractor speed must be adjusted to avoid bouncing of the spray hoods. Avoid operation on rough or sloping ground where the spray hoods might be raised off the ground.

When applying to sunflowers that are grown on raised beds, ensure that the hood is designed to completely enclose the spray solution. If necessary, extend the front and rear flaps of the hoods to reach the ground in deep furrows.

These requirements must be followed:

- The spray hoods must be operated on the ground or skimming across the ground.
- Do not apply more than 1 quart of Glyphomax Plus per acre per application. Sunflowers must be at least 12 inches tall, measured without extending the leaves.
- Leave at least an 8 inch untreated strip over the drill row. For example, if the crop row width is 38 inches, the maximum width of the spray hood should be 30 inches.
- Maximum tractor speed: 5 mph.
- Maximum wind speed: 10 mph.

- Use low drift nozzles.

Crop injury may occur when the foliage of treated weeds come into direct contact with leaves of the crop. Do not apply this product when the leaves of the crop are growing in direct contact with target weeds. Droplets, mist, foam or splatter of the herbicide solution that contact the crop will cause discoloration, stunting or destruction.

Contact of this product in any manner to any vegetation to which treatment is not intended may cause damage. Such damage shall be the sole responsibility of the applicator.

For specific rates of application and instructions for control of various annual and perennial weeds, see the "Weed Control" tables in the label booklet for Glyphomax Plus herbicide.

Restrictions:

- **Preharvest Interval:** Do not graze treated areas or harvest sunflowers for food or feed within 14 days of application.
- Do not graze or feed sunflower forage or fodder following application of Glyphomax Plus through hooded sprayers.
- Do not apply more than 3 quarts per acre per year using hooded sprayer equipment.
