This product is recommended for use on the following established turfgrass species:

How to Apply

Apply this product using a drop or rotary-type spreader designed to apply granular fertilizer. Calibrate application equipment prior to use according to the manufacturer's directions. Check frequently to be sure equipment is working properly and distributing granules uniformly. Do not use spreaders that apply material in narrow concentrated bands. Avoid skips or overlaps as poor weed control or turfgrass injury may occur. More uniform application may be achieved by spreading half of the required amount of product over the area and then applying the remaining half in swaths at right angles to the first. A splashboard mounted below the release point of drop-type spreaders can improve the uniformity of product distribution. Optimum weed control performance will be obtained when an application is followed by sprinkler irrigation or rainfall within a few hours.

When to Apply

Apply this product 1 to 2 weeks prior to germination of annual weeds since it does not control established weeds.

How Much to Apply

Ĩ	Cool Season Turfgrass	Warm Season Turfgrass
summer annual grass weeds (spring application)	2.75 to 5.5 lb/1000 sq ft	5.5 lb/1000 sq ft
winter annual grass weeds (fall application)	2.75 to 3.6 lb/1000 sq ft	5.5 lb/1000 sq ft

This product may also be applied in split applications. This program is desirable when the initial application is made well in advance of weed germination and where weed control is desired for a longer period of time. For a split application, apply this product at 2.75 lb plus 2.75 lb per 1000 sq ft for cool season turfgrass and in the northern half of the warm season turfgrass area, or 3.6 lb plus 3.6 lb per 1000 sq ft in the southern half of the warm season turfgrass area. Make the second application 8 to 10 weeks following the 2.75 lb per 1000 sq ft rate and 10 to 12 weeks following the 3.6 lb per 1000 sq ft rate.
