- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Systhane[®] 40WP fungicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Systhane 40WP according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Systhane 40WP.

Directions for Use

Refer to product label for General Use Information and Mixing instructions.

Use Systhane 40WP at time of planting as a seed treatment to protect against sore shin (*Rhizoctonia solani*) and black root rot (*Thielaviopsis basicola*) which impairs good cotton seed germination and seedling development. Systhane 40WP may be applied to dry seed with conventional slurry or mist seed treating equipment. For best results, the seed must be completely and uniformly covered with fungicide. Systhane 40WP can be tank mixed with other properly labeled cottonseed protectants such as Apron TL fungicide for Pythium control.

Label treated seed "This seed is treated with Systhane 40WP. Do not use for food, feed, oil production or any other purpose except planting." Do not graze cotton plants grown from treated seed. Store away from feed and foodstuffs.

Use 0.05 to 0.0675 lb (0.8 to 1.0 oz) of Systhane 40WP (0.02 to 0.027 lb active) per 100 lb cotton seed to reduce seedling damage caused by sore shin (*Rhizoctonia solani*) and black root rot (*Thielaviopsis basicola*).

For cotton seed treatment, always use Systhane 40WP with an EPA approved dye or colorant that imparts an unnatural color to the seed.
