Directions for Use

Weeds Controlled

The following weeds will be controlled with the rates of Milestone VM indicated below. For best results, most weeds should be treated when they are actively growing and under conditions favorable for growth. Use a higher rate in the rate range when growing conditions are less than favorable or when weed foliage is tall and dense or when residual control is desired. Milestone VM also provides preemergence control of germinating seeds and control of emerged seedlings of susceptible weeds following application.

Note: Numbers in parentheses (-) refer to specific use directions for a particular weeds species.
