**SUBJECT:** Application for Pesticide Notification (PRN 98-10)  
Request General Label Changes  
EPA Reg. No. 62719-578  
Application Dated October 29, 2008

Dear Ms. Gilbert:

The Agency is in receipt of your Application for Pesticide Notification under Pesticide Registration Notice (PRN) 98-10 dated 10/29/088 for the above product. The Registration Division (RD) has conducted a review of this request for its applicability under PRN 98-10 and finds that the action requested fall within the scope of PRN 98-10 and PRN 2008-1. The label submitted with the application has been stamped "Notification" and will be placed in our records.

If you have any questions, please call me directly at 703-305-6249 or Owen F. Beeder of my staff at 703-308-8899.

Sincerely,

A handwritten signature in black ink, appearing to read "Linda Arrington".

## Spring Use Directions for Established Alfalfa Dodder Control in Alfalfa Seed Crops (For Use in Colorado)

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Kerb® SC herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Kerb SC according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Kerb SC.

### Directions for Use

#### General Information

For effective control Kerb SC must be moved into the soil either by rainfall or irrigation before the germination of dodder. Preferably, irrigation should be made within 1 to 3 days following the Kerb SC application, but can be delayed up to 2 weeks if necessary provided that irrigation precedes dodder germination. If irrigation of the field treated with Kerb SC must be delayed, a light mechanical incorporation (maximum 1-inch depth) should follow the Kerb SC application and the field irrigated within 2 weeks.

When using flood type or overhead sprinkler irrigation systems the amount of irrigation following the Kerb SC application should not exceed one inch of water. Excess irrigation following the Kerb SC application and prior to germination of dodder may decrease the effectiveness of Kerb SC.

#### Dosage and Timing

For effective control, Kerb SC must be applied before dodder germinates. Follow directions given below depending on method of irrigation used:

**Furrow Irrigation:** Apply Kerb SC at the rate of 3.5 to 5.0 pints of product (1.5 to 2 lb active ingredient) per acre. Incorporate lightly at time of application and irrigate within seven days.

**Flood Irrigation:** Apply Kerb SC at the rate of 3.5 pints of product (1.5 lb active ingredient) per acre. Flood field with 0.5 to 1.0 inch of water within 1 to 3 days after application.

**Overhead Sprinkler Irrigation:** Use same directions as given above for flood irrigation.

Excessive amounts of irrigation water following Kerb SC application may adversely affect the herbicidal activity.

**(SPRING APPLICATIONS)**

**Cheatgrass Control in Established Alfalfa (Spring Applications)**

**Dosage and Timing**

Spring application of Kerb SC will control cheatgrass if application is made when cheatgrass has recently germinated or expected to germinate. Apply Kerb SC as a broadcast application at the rate of 2.0 to 2.5 pints of product (0.8 to 1 lb active ingredient) per acre.

## Kerb<sup>®</sup> SC

EPA Reg. No. 62719-397

### Preemergence and Postemergence Control of Certain Winter Annual and Perennial Grasses in Blackberry, Boysenberry, Raspberry

(For Use in Idaho)

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Read the label affixed to the container for Kerb<sup>®</sup> SC herbicide before applying. Carefully follow all precautionary statements and applicable use directions.
- Use of Kerb SC according to this supplemental labeling is subject to all use precautions and limitations imposed by the label affixed to the container for Kerb SC.

### Directions for Use

#### General Information

Kerb SC is a selective herbicide recommended for fall and winter applications to established blackberries, boysenberries and raspberries for both preemergence and postemergence control of certain winter annual and perennial grasses.

#### Dosage

Kerb SC may be applied at the rate of 2.5 to 7.0 pints of product (1 to 3 lb active ingredient) per acre broadcast application. The rate will depend on the weed species present and the soil texture of the site being treated. Follow the weed control instructions listed in the chart below:

Pints of Kerb SC SC Per Broadcast Acre <sup>1</sup>		
Weeds Controlled	Dependable Rainfall or Overhead Irrigation <sup>2</sup>	Comments
bluegrass, annual	2.5 – 5.0	Use low rates on light
quackgrass	5.0 – 7.0	to medium soils and high
ryegrass, perennial	5.0 – 7.0	rates on heavy soils

<sup>1</sup> Dosage rates specified are in pounds of Kerb SC per acre broadcast application. Reduce rates accordingly for banded applications.

<sup>2</sup> For effective weed control, rainfall or overhead irrigation is essential following the application of Kerb SC.

**Crop Tolerance**

Established cane fruit are tolerant to specified rates of Kerb SC SC. Newly transplanted blackberries, boysenberries and raspberries should be well rooted and transplanted for at least 3 months prior to the application of Kerb SC.

**Timing and Application**

Apply Kerb SC only during the fall or winter months. For optimum results, apply Kerb SC SC during November or December. Do not make applications when the ground is frozen. Mix the specified amount of Kerb SC in clean water and apply uniformly with a low pressure ground sprayer in 20 to 50 gallons of water per acre.

**Blackberry/Boysenberry/Raspberry - Specific Use Restrictions**

- Do not apply more than 3 lb/acre active ingredient (7.0 pt/acre of Kerb SC) or make more than one application of Kerb SC per season.
