This product should be added at any point in the system where uniform mixing can occur Being a slow release granular biocide it is important to add the product with equipment capable of feeding this product flow proportionally to the total flow of fluid being injected into the formation

**CONTINUOUS DOSING METHOD** For controlling slime forming sulfide and acid producing bacteria yeasts and fungi in oil and gas field water polymer or micellar floods or other oil and gas field water systems add 10-80 ppm of this product (4-32 pounds) per 1 000 barrels of wa, depending on the severity of the contamination

**INTERMITTENT OR SLUG DOSE METHOD** When the system is noticeably fouled, add 40 200 ppm of this product (15-75 pounds) per each 1 000 barrels of water intermittently for 4-8 hours per day and from 2-4 times per week or as needed depending on the severity of the contamination Adjust the amount of this product used as the microbiological condition improves
