Mr. William McCormick
Product Safety & Regulatory Compliance
The Clorox Company
P.O. Box 493
Pleasanton, CA 94566-0803

Dear Mr. McCormick:

Subject: Request for Stamped Label
MAXFORCE Professional Insect Control Ant Killer
EPA Registration No.: 64248-2
Your Submission Dated September 28, 1992

The labeling referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, is acceptable. A stamped copy is enclosed for your records.

At the next label printing, change "Hazards to Humans" to "Hazards to Humans and Domestic Animals."

Based on the explanation provided in your fax of November 3, 1992, we can accept the term "Professional Insect Control" in the product name. However, should the intended market for this product change in the future, i.e., include the homeowner market, the term "professional" must be deleted from the product name.

Sincerely,

George T. LaRocca
Product Manager (13)

MAXFORCE®

PROFESSIONAL INSECT CONTROL™

DIRECTIONS FOR USE It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

1. Simply place each bait station indoors immediately next to any trails or close to areas where ants are numerous. Nests are usually located in dark, humid and warm areas close to a water and food source. For maximum effectiveness in ant control MAXFORCE should be placed in or near wall voids, electrical outlets (if wiring permits), potted plants, waste-paper baskets, garbage cans and sinks. MAXFORCE can be placed in cabinets, next to food and dishes, near sensitive equipment or anywhere your ant problem occurs.
2. For normal infestations, you should use 3 MAXFORCE Ant Killer bait stations in an average size room. For heavier infestations, you will need additional bait stations in each room. If infestation persists beyond two weeks, relocate bait stations or use additional bait stations.
3. The stickers provided in the box can be used to attach MAXFORCE to vertical surfaces if desired.
4. Do not spray the bait stations. Avoid placing the bait stations on freshly sprayed surfaces.
5. Increased ant activity may be seen near the bait stations immediately after placement for short periods but you can expect to see less activity within one week. After placement, ant trails may be observed between the bait stations and the nests. For best results, do not interfere with the ants or the stations during their use because ants must carry the bait back to destroy the queen and colony.
6. Replace all bait stations every 3 months for continuous control of ants.

MAXFORCE® Ant Killer Bait Stations contain a patented bait formulation which kills Pharaoh ants and other common household ants (see side panel for species). When properly used, MAXFORCE will attract foraging worker ants to the bait station. The ants will feed on the bait which contains Hydramethylnon, a delayed action stomach poison. Then, the worker ants will take some of this bait back to the nest where they will pass it on to destroy the queen and the entire colony. MAXFORCE will kill both adult and larval ant forms.

Do not use residual sprays with or near the MAXFORCE bait stations, as the worker ants must remain alive to carry the bait back to the queen and immature workers. Residual sprays may cause worker ants to spread out and form secondary colonies. MAXFORCE Ant Killer works because it is non-repellent and thus will not cause secondary colony formation.

MAXFORCE has no insecticide odor and it is child-resistant and easy to use. It may be used for the control of ants wherever they are a problem (e.g. hospitals, nursing homes, residential establishments, warehousing and commercial establishments, food service, food manufacturing and food processing facilities, laboratories, computer and electronic equipment facilities, pet shops, zoos, buses, boats and trains).
