PROFESSIONAL INSECT CONTROL® ANT KILLER BAIT STATIO

PRECAUTIONARY STATEMENTS:
CAUTION: HAZARDS TO HUMANS AND DOMESTIC ANIMALS.
MAY Be harmful if swallowed.

STATEMENT OF PRACTICAL TREATMENT: It swallowed, drink two glasses of water and induce vomiting by touching back of throat with finger. Do not induce vomiting or give anything by mouth to an unconscious person. Get medical attention. In case of emergency, call day or night, 1-800-426-6228.

STORAGE AND DISPOSAL: Do not contaminate water, food or feed by storage or disposal. Do not remove bait[s] -or- [bait stations] from container. Wrap used bait stations and put in [a garbage can] -or- [trash].

CAUTION: KEEP OUT OF REACH OF CHILDREN (See Cautions on Side Panel)

FOR USE IN COMMERCIAL, INDUSTRIAL AND RESIDENTIAL AREAS

Contains __ Child-Resistant Bait Stations

TOTAL NET WT

PROFESSIONAL INSECT CONTROL'ANT KILLER BAIT STATIONS

DIRECTIONS FOR USE It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

- 1. Simply place each bait station indoors or outdoors immediately next to PROFESSIONAL INSECT CONTROL® ANT KILLER BAIT STATIONS any trails or close to areas where ants are numerous. Nests are usually located in dark, humid and warm areas close to a water and food source. For maximum effectiveness in ant control the bait station should be placed in or near wall voids, electrical outlets (if wiring permits), potted plants, waste-paper baskets, garbage cans and sinks. Bait stations can be placed in cabinets, next to food and dishes, near sensitive equipment or anywhere your ant problem occurs.
- 2. INDOOR USE: For normal infestations, you should use 3 MAXFORCE Ant Killer bait stations in an average size room. For heavier infestations, you will need additional bait stations in each room. If infestation persists beyond two weeks, replace all bait stations where the bait has been completely consumed and re-locate bait stations that show no evidence of ant feeding.
- 3. OUTDOOR USE: Bait stations should be placed near ant activity or anywhere ants may gain access to the structure. Application sites include air conditioning units, electrical conduits, vents, pipe chases, concrete slabs, skylights on roofs; around ant mounds, garbage cans, and trees; along walls, windowsills, sidewalks and driveways; on ground around structure.
- 4. The slickers provided in the box can be used to attach the bait stations to vertical surfaces if desired.
- 5. Do not spray the bait stations. Avoid placing the bait stations on freshly sprayed surfaces.
- 6. Increased ant activity may be seen near the bait stations immediately after placement for short periods but you can expect to see less activity within one week. After placement, ant trails may be observed between the bait stations and the nests. For best results, do not interfere with the ants or the stations during their use because ants must carry the bait back to destroy the gueen and colony.
- 7. Inspect all bait stations and replace as needed for continuous control of ants.

MAXFORCE® Ant Killer Bait Stations contain a patented bait formulation which kills Pharaoh ants and other common household ants (see side panel for species). When properly used, MAXFQRCE Ant Killer bait will attract foraging worker ants. The ants will feed on the bait which contains Hydramethylnon, a delayed action stomach polson. Then, the worker ants will take some of this bait back to the nest where they will pass it on to destroy the queen and the entire colony. MAXFORCE Ant Killer will kill both adult and larval ant forms.

Do not use residual sprays with or near the MAXFORCE bait stations, as the worker ants must remain alive to carry the balt back to the queen and immature workers. Residual sprays may cause worker ants to spread out and form secondary colonies. MAXIFORCE Ant Killer works because it is non-repellent and thus will not cause secondary colony formation.

MAXFORCE Ant Killer Bait Stations have no insecticide odor, are childresistant and easy to use. The patented bait station design allows you to inspect each bait placement and monitor the amount of ant feeding. They may be used for the control of ants wherever they are a problem (e.g. hospitals, nursing homes, day care centers, schools, aircraft, residential establishments, warehousing and commercial establishments, food service, food manufacturing and food processing facilities, laboratories, computer and electronic equipment facilities, pet shops, zoos, buses, boats and trains).
