- 2. Make the following label changes before you release the product for shipment:
  - Revise the EPA Registration Number to read, "EPA Reg. No. 64744-4."
- 3. Submit one copy of the revised final printed label for the record before you release the product for shipment.

Should you wish to add/retain a reference to the company's website on your label, then please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, regardless of whether a website is referenced on your product's label, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore, should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA section 6. Your release for shipment of the product constitutes acceptance of these conditions. A stamped copy of the label is enclosed for your records. Please also note that the record for this product currently contains the following CSFs:

- Basic CSF dated 12/19/2019
- Alternate CSF #1, dated 12/19/2019
- Alternate CSF #2, dated 12/19/2019
- Alternate CSF #3, dated 12/19/2019

If you have any questions, please contact Lindsay Roe by phone at 703 347-0506, or via email at roe.lindsay@epa.gov; or Craig Reeves by phone at 703 347-0486, or via email at reeves.craig@epa.gov\_

# PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS CAUTION

Harmful if swallowed. Harmful if absorbed through skin. Harmful if inhaled. Causes moderate eye irritation.

Avoid contact with skin, eyes or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco or using the toilet. Wear long-sleeved shirt and long pants, socks, shoes, and waterproof gloves. Remove and wash contaminated clothing before reuse. Avoid breathing dust or spray mist. Wear protective eyewear.

# PERSONAL PROTECTIVE EQUIPMENT (PPE)

Mixers, loaders, applicators and other handlers must wear:

- Long-sleeved shirt and long pants
- Shoes plus socks
- Chemical resistant gloves made of: barrier laminate, butyl rubber ≥14 mils, nitrile rubber ≥14 mils, neoprene rubber ≥14 mils, natural rubber ≥14 mils, polyethylene, polyvinyl chloride ≥14 mils, or viton ≥14 mils
- Protective eyewear

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them. Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

#### ENGINEERING CONTROL STATEMENT

Pilots must use an enclosed cab that meets the definition listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.305].

# USER SAFETY RECOMMENDATIONS

**USERS SHOULD:** Wash hands before eating, drinking, chewing gum, using tobacco or using the toilet. Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash thoroughly and change into clean clothing.

# ENVIRONMENTAL HAZARDS

**Fish Advisory Statement:** This copper product is toxic to fish and aquatic organisms and may contaminate water through runoff. Unlike most organic pesticides, copper is an element and will not break down in the environment and will therefore accumulate in sediment with repeated applications. Copper is a micronutrient, but its pesticidal application rate exceeds the amount of copper needed as a nutrient. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in waters adjacent to treated areas. For terrestrial uses, do not apply directly to water, to areas where surface water is present or to intertidal areas below the mean high-water mark. Do not contaminate water when disposing of equipment wash-waters or rinsate.

# PHYSICAL AND CHEMICAL HAZARDS

Do not mix or allow contact with oxidizing agents. Hazardous chemical reaction may occur.

# **DIRECTIONS FOR USE**

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

# AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR part 170. This Standard contains requirements for protection of agricultural workers on farms, forests, nurseries and greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

# Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours without required PPE.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil or water, is:

- Coveralls
- Chemical-resistant gloves made of any waterproof material
- Shoes plus socks
- Protective eyewear

#### For Greenhouse Use ONLY:

The 48-hour restricted entry interval (REI) may be reduced to 24-hour REI, provided that the following conditions are met: For at least seven days following the application of copper-containing products in greenhouses:

- at least one container or station designed specifically for flushing eyes is available in operating condition with the WPS- required decontamination supplies for workers entering the area treated with copper-containing products,
  - workers are informed orally, in a manner they can understand:
    - o that residues in the treated area may be highly irritating to the eyes,
    - that they should take precautions, such as refraining from rubbing their eyes, to keep the residues out of their eyes,
    - that if they do get residues in their eyes, they should immediately flush their eyes with the eye flush container or eye flush station that is located with the decontamination supplies, and
    - o how to operate the eye flush container or eye flush station.

# NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are not within the scope of the Worker Protection Standard for agricultural pesticides 40 CFR Part 170. The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries or greenhouses.

Do not enter or allow others to enter until sprays have dried.

# **PRODUCT INSTRUCTIONS**

SPU-02720-F may be applied as an aerial, ground dilute or ground concentrate spray unless specifically directed otherwise in the specific crop use directions.

The per acre use rate of SPU-02720-F is applicable for both dilute and concentrate spraying. Depending upon the equipment used and the specific crop, the spray volume applied per acre will differ. Refer to Minimum Recommended Spray Volume Table. Complete spray coverage is essential to assure optimum performance from SPU-02720-F. When treating by aerial application or with low volume application equipment, unless you have had specific previous experience, it is advisable to test for compatibility and tolerance to crop injury prior to full scale commercial utilization.

Consult the label for specific rates and timing of application by crop. Where application rates and intervals are provided in a range (e.g., 4 to 12 pounds and 7 to 10 days), use the higher rates and shorter spray intervals when rainfall is heavy and/or disease pressure is high. Use the higher rates for large mature tree crops.

The Pre-Harvest Interval (PHI) for SPU-02720-F is 0-days unless noted.

### RESTRICTIONS

- Do not tank mix SPU-02720-F with products containing the active ingredient aluminum tris (O-ethyl phosphate) (e.g. "Aliette" fungicide) for use on any registered crops unless appropriate precautions have been taken to buffer the spray solution because severe phytotoxicity may result.
- Use in accordance with the most restrictive of label limitations and precautions. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing.
- This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.

#### SPECIAL PRECAUTIONS

- If SPU-02720-F is applied in a spray solution having a pH of less than 6.5, phytotoxicity may occur.
- Environmental conditions such as extended periods of wet weather, acid rain, etc. which alter the pH of the leaf surface may affect the performance of SPU-02720-F resulting in possible phytotoxicity or loss of effectiveness.
- Agricultural chemicals may perform in an unpredictable manner when tank mixed, especially where several products are involved. Reduced effect on pests or crop injury may occur. Unless recommended on this label or by a state/local expert, it is advisable to test for compatibility and potential crop injury prior to commercial use of a new tank mix.
- It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, such as aluminum, rubber and some synthetic materials. This factor should be taken into consideration when selecting proper application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use.
- Apply this product only through one or more of the following types of systems: sprinkler, including center pivot, lateral
  move, traveler, big gun, or plastic pipe solid set system(s). Do not apply this product through any other type of irrigation
  system. In California, do not apply in systems which contain aluminum parts or components.
- While volume is important in obtaining full spray coverage, often factors such as foliage density, environmental
  conditions and sprayer calibration have a greater impact. Always be sure that sprayers are calibrated to spray equipment
  manufacturer's specifications and environmental conditions are within those recommended by State and local regulatory
  authorities.
- When mixing, fill the spray tank one-half full with water. Add SPU-02720-F slowly to tank while hydraulic or mechanical
  agitation is operating and continue filling with water. Spreaders, stickers, insecticides, nutrients, etc. should be added
  last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank or contact your chemical
  supplier. Observe all precautions and limitations on the labels of all products used in mixtures.
- It is the pesticide user's responsibility to ensure that all products are registered for the intended use. Read and follow the applicable restrictions and limitations and directions for use on all product labels involved in tank mixing. Users must follow the most restrictive directions for use and precautionary statements of each product in the tank mixture.

# **RESISTANCE MANAGEMENT**

COPPER GROUP M01
------------------

SPU-02720-F contains a Group M01 fungicide. Any fungal/bacterial population may contain individuals naturally resistant to SPU-02720-F and other Group M01 fungicides/bactericides. Fungal isolates/bacterial strains with acquired resistance to Group M01 may eventually dominate the fungal/bacterial population if Group M01 fungicides/bactericides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. This may result in partial or total loss of control of those species by SPU-02720-F other Group M01 fungicides.

To delay fungicide/bactericide resistance take one or more of the following steps:

- Rotate the use of SPU-02720-F or other Group M01 fungicides/bactericides within a growing season sequence with different groups that control the same pathogens.
- Avoiding the consecutive use of SPU-02720-F or other target site of action Group M01 fungicides/bactericides that
  might have a similar target site of action, on the same fungal pathogen species.
- Using tank mixtures or premixes with fungicides/bactericides from different target site of action Groups as long as
  the involved products are all registered for the same use, have different sites of action and are both effective at the
  tank mix or premix rate on the fungal pathogen of concern.
- Adopt and integrated disease management program for fungicide/bactericide use that includes scouting, uses
  historical information related to pesticide use, and crop rotation, and which considers host plant resistance, impact
  of environmental conditions on disease development, disease thresholds, as well as cultural, biological and other
  chemical control practices.
- Where possible, make use of predictive disease models to effectively time fungicide/bactericide applications. Note that using predictive models alone is not sufficient to manage resistance.

- Basing fungicides/bactericides use on a comprehensive Integrated Pest Management (IPM) program.
- Monitoring treated fungal/bacterial pathogen populations for loss of field efficacy and resistance development.
- Contacting your local extension specialist, certified crop advisors and/or manufacturer for fungicides/bactericides resistance management and/or integrated management recommendations for specific crops and resistant biotypes.
- For further information or to report suspected resistance contact Spiess-Urania Chemicals GmbH at <u>www.spiess-urania.com</u>. You can also contact your pesticide distributor or university extension specialist to report resistance.

# SPRAY DRIFT

A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, airblast, chemigation) can influence pesticide drift. The applicator must evaluate all factors and make appropriate adjustments when applying this product.

#### Wind Speed:

Do not apply at wind speeds greater than 15 mph. Only apply this product if the wind direction favors on-target deposition (approximately 3 to 10 mph), and there are not sensitive areas within 250 feet downwind.

#### Temperature Inversions:

If applying at wind speeds less than 3 mph, the applicator must determine if a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

#### Other State and Local Requirements:

Applicators must follow all state and local pesticide drift requirements regarding application of copper compounds. Where states have stringent regulations, they must be observed.

#### Equipment:

All aerial and ground application equipment must be properly maintained and calibrated using appropriate carriers or surrogates.

#### **Aerial Applications:**

- Do not release spray at a height greater than 10 ft. above the vegetative canopy, unless a greater application height is necessary for pilot safety.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do not apply when wind speed exceeds 15 mph at the application site. If the windspeed is greater than 10 mph, the boom length must be 65% or less of the wingspan for fixed wing aircraft and 75% or less of the rotor diameter for helicopters. Otherwise, the boom length must be 75% or less of the wingspan for fixed-wing aircraft and 90% or less of the rotor diameter for helicopters.
- Applicators must use ½ swath displacement upwind at the downwind edge of the application area.
- Do not apply during temperature inversions.

# **Ground Boom Application:**

- Apply with the spray release height recommended by the manufacturer, but no more than 4 feet above the ground or crop canopy.
- Applicators are required to use a medium or coarser droplet size (ASABE S572.1).
- Do ont apply when wind speeds exceed 15 miles per hour at the application site.
- Do not apply during temperature inversions.

# SPRAY DRIFT ADVISORIES

THE APPLICATOR IS RESPONSIBLE FOR AVOIDING OFF-SITE SPRAY DRIFT. BE AWARE OF NEARBY NON-TARGET SITES AND ENVIRONMENTAL CONDITIONS.

#### IMPORTANCE OF DROPLET SIZE

An effective way to reduce spray drift is to apply large droplets. Use the largest droplets that provide target pest control. While applying larger droplets will reduce spray drift, the potential for drift will be greater if applications are made improperly or under unfavorable environmental conditions.

# Controlling Droplet Size – Ground Boom

- Volume Increasing the spray volume so that larger droplets are produced will reduce spray drift. Use the highest
  practical spray volume for the application. If a greater spray volume is needed, consider using a nozzle with a higher
  flow rate.
- Pressure Use the lowest spray pressure recommended for the nozzle to produce the target spray volume and droplet size.
- Spray Nozzle Use a spray nozzle that is designed for the intended application. Consider using nozzles designed to
  reduce drift.

#### **Controlling Droplet Size – Aircraft**

• Adjust Nozzles - Follow nozzle manufacturers recommendations for setting up nozzles. Generally, to reduce fine droplets, nozzles should be oriented parallel with the airflow in flight.

#### **BOOM HEIGHT – Ground Boom**

Use the lowest boom height that is compatible with the spray nozzles that will provide uniform coverage. For ground equipment, the boom should remain level with the crop and have minimal bounce.

#### **RELEASE HEIGHT - Aircraft**

Higher release heights increase the potential for spray drift. When applying aerially to crops, do not release spray at a height greater than 10 ft. above the crop canopy, unless a greater application height is necessary for pilot safety.

#### SHIELDED SPRAYERS

Shielding the boom or individual nozzles can reduce spray drift. Consider using shielded sprayers. Verify that the shields are not interfering with the uniform deposition of the spray on the target area.

#### TEMPERATURE AND HUMIDITY

When making applications in hot and dry conditions, use larger droplets to reduce effects of evaporation.

#### **TEMPERATURE INVERSIONS**

Drift potential is high during a temperature inversion. Temperature inversions are characterized by increasing temperature with altitude and are common on nights with limited cloud cover and light to no wind. The presence of an inversion can be indicated by ground fog or by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing. Avoid applications during temperature inversions. **WIND** 

# Drift potential generally increases with wind speed. AVOID APPLICATIONS DURING GUSTY WIND CONDITIONS. Applicators need to be familiar with local wind patterns and terrain that could affect spray drift.

#### **Other State and Local Requirements:**

Applicators must follow all state and local pesticide drift requirements regarding application of copper compounds. Where states have stringent regulations, they must be observed.

#### CHEMIGATION INSTRUCTIONS

Apply this product only through one or more of the following types of systems: sprinkler, including center pivot, lateral move, traveler, big gun, or plastic pipe solid set system(s). Do not apply this product through any other type of irrigation system. In California, do not apply in systems which contain aluminum parts or components.

Crop injury, lack of effectiveness or illegal pesticide residues in the crop can result from nonuniform distribution of treated water.

If you have questions about calibration, contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label-prescribed safety devices for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise.

Shut off injection equipment after treatment and continue to operate irrigation system until SPU-02720-F has been cleared from the last sprinkler head.

#### CHEMIGATION SYSTEMS CONNECTED TO PUBLIC WATER SYSTEMS

Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Chemigation systems connected to public water systems must contain a functional, reduced-pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into the reservoir tank prior to pesticide introduction. There shall be a complete physical break (air gap) between the outlet end of the fill pipe and the top or overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

**NOTE:** It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, such as aluminum, rubber and some synthetic materials. This factor should be taken into consideration when selecting proper application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use.

When mixing, fill the nurse tank half full with water. Add SPU-02720-F slowly to tank while hydraulic or mechanical agitation is operating and continue filling with water. Stickers, spreaders, insecticides, nutrients, etc. should be added last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank. Because of the wide variety of possible combinations which can be encountered, observe all precautions and limitations on the labels of all products used in mixtures. Agitate the mixture in the nurse tank.

SPU-02720-F should be added through a traveling irrigation system continuously or at the last 30 minutes of solid set irrigation systems. Shut off injection equipment after treatment and continue to operate irrigation system until SPU-02720-F has been cleared from the last sprinkler head.

# SPRINKLER CHEMIGATION

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from backflow.

The pesticide injection pipeline must also contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement injection pump (e.g., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

**NOTE:** It must be determined if proper application equipment is available and if waste associated with its use can be properly handled. Agricultural chemicals are often reactive with the materials used in the construction of application equipment, such as aluminum, rubber and some synthetic materials. This factor should be taken into consideration when selecting proper application equipment. It is necessary that all application equipment be thoroughly flushed with clean water after each day's use. When mixing, fill the nurse tank half full with water. Add SPU-02720-F slowly to tank while hydraulic or mechanical agitation is operating and continue filling with water. Stickers, spreaders, insecticides, nutrients, etc. should be added last. If compatibility is in question, use the Compatibility Jar Test before mixing a whole tank. Because of the wide variety of possible combinations which can be encountered, observe all precautions and limitations on the labels of all products used in mixtures.

Agitate the mixture in the nurse tank.

SPU-02720-F should be added through a traveling irrigation system continuously or at the last 30 minutes of solid set irrigation systems. Shut off injection equipment after treatment and continue to operate irrigation system until SPU-02720-F has been cleared from the last sprinkler head.

# APPLICATION INSTRUCTIONS

#### Minimum Spray Volume (Gallons Per Acre) When Applying SPU-02720-F Ground

	Aerial	Dilute	Concentrate
Citrus	10	800	100**
Conifers	10	100	30
Field Crops	3	20	3
Ornamentals	10	100	50
Small Fruits	5	150	50
Tree Crops	10	400	50
Vegetables	3	20	3
Vines	5	150	50
Miscellaneous	10	150	50

\*\*Pesticide application equipment such as "Curtec" or other similar sprayers which are capable of obtaining thorough coverage at low volumes may be used at as low as 20 gallons per acre of spray volume.

The recommendations of the State Agricultural Extension Service should be closely followed as to timing, frequency and number of sprays per season.

#### FROST INJURY PROTECTION BACTERIAL ICE NUCLEATION INHIBITOR

Application of SPU-02720-F made to all crops listed on this label at rates and stages of growth indicated on this label, at least 24 hours prior to anticipated frost conditions, will afford control of ice nucleating bacteria (*Pseudomonas syringae*, *Erwinia herbicola*, and *Pseudomonas fluorescens*) and may therefore provide some protection against light frost. Do not use SPU-02720-F for those geographical areas where weather conditions favor severe frost.

# CITRUS Field Nursery Grown

To control Melanose, Scab, Pink Pitting, Greasy Spot, Brown Rot and for suppression of Citrus Canker, apply 1.5 to 3.14 lbs ((0.53-1.1 lbs. metallic copper) of SPU-02720-F per acre. Apply SPU-02720-F at 28-day intervals if needed depending on disease severity. Do not apply more than 36 lbs (12.6 lbs metallic copper) of SPU-02720-F per acre per year.

**NOTE:** Phytotoxicity may occur on young tender flush when SPU-02720-F is applied to citrus seedlings grown in greenhouses or shadehouses.

#### CONIFERS

For use on conifers, including Douglas Fir, Fir, Juniper, Leyland Cypress, Pine and Spruce, in Christmas tree plantings and silviculture nurseries.

For control of foliar diseases, apply SPU-02720-F as a thorough cover spray at rates ranging from 0.66 to 1.51 pounds (0.23 - 0.53 lbs. metallic copper) per acre. Begin applications in the spring at the initiation of new growth and repeat at 7 to 30-day intervals if needed. Use the higher rates when disease pressure is severe or when environmental conditions favor disease development. Maximum annual rate per acre is 57.14 pounds (20 pounds metallic copper).

Crop	Scientific Name	Disease
Douglas Fir	Pseudotsuga menziesii	Rhabdocline Needlecast
Fir	Abies spp.	Needlecasts
Juniper	Juniperus spp.	Anthracnose, Phomopsis Twig Dieback
Leyland Cypress	X Cupressocyparis leylandii	Cercospora Needle Blight
Pine	Pinus spp.	Needlecasts
Spruce	Picea spp.	Needlecasts
Lichens: To control lichens on any of the conifers above, apply 3 pounds of SPU-02720-F (1.05 pounds metallic copper) per acre as a dormant		
	of the conifers above, apply 3 pounds of SPU-02720	

application before new growth emerges in the spring. The addition of a non-ionic surfactant will improve control. A second application may be required after 12 months

Restrictions: Do not buffer or combine with emulsifiable concentrate insecticides.

#### **GREENHOUSE AND SHADEHOUSE CROPS**

Notice to User: SPU-02720-F may be used in greenhouses and shadehouses to control diseases on crops which appear on this label, and specific instructions have been developed for the crops listed. The grower should bear in mind that the sensitivity of crops grown in greenhouses and shadehouses differs greatly from crops grown under field conditions. Neither the manufacturer nor seller has determined whether or not SPU-02720-F can be used safely on all greenhouse and shadehouse grown crops. The user must determine if SPU-02720-F can be used safely prior to commercial use. In a small area, apply the specified rates to the plants in question, e.g. foliage, fruit, etc., and observe for 7 to 10 days for symptoms of phytotoxicity prior to commercial use. Consequently, injuries arising from the use of SPU-02720-F on these types of greenhouse and shadehouse crops are the responsibility of the user.

Apply SPU-02720-F according to specific rates given for those crops in pounds per acre. One level tablespoon of SPU-02720-F per 1,000 square feet is equivalent to 1.0 pound of product per acre. Apply SPU-02720-F in adequate water for thorough coverage of plant parts. Begin application at first sign of disease and repeat if needed; use shorter spray intervals during periods when severe disease conditions persist. For maximum annual rates per acre, refer to the crop specific directions.

NOTE: Phytotoxicity may occur on young tender flush when SPU-02720-F is applied to citrus seedlings grown in greenhouses or shadehouses.

		· · · · · · · · · · · · · · · · · · ·

#### ORNAMENTALS

Use SPU-02720-F for control of bacterial and fungal diseases of foliage, flowers and stems on ornamentals in greenhouses, shade houses, outdoor nurseries and outdoor landscape plantings.

For ornamental crops in dormancy, apply as a thorough cover spray at rates ranging from 0.42 to 1.71 pounds<sup>^</sup> (0.15 - 0.6 lbs. metallic copper) per acre of SPU-02720-F. When new growth is present, apply as a thorough cover spray at rates ranging from 0.42 to 1.28<sup>^</sup> (0.15 - 0.45 lbs. metallic copper) pounds per acre of SPU-02720-F. **One level tablespoon of SPU-02720-F per 1,000 square feet is equivalent to 1.0 pounds of product per acre.** Begin application at first sign of disease and repeat at 7 to 14-day intervals if needed; use the higher rates and shorter spray intervals during periods of frequent rains or when severe disease conditions persist. Maximum annual rate per acre is 57.1 pounds (20 lbs. metallic copper).

SPU-02720-F may be used alone or in combination with other fungicides registered for use on ornamentals as a maintenance spray. Use in accordance with the most restrictive of label limitations and precautions. Do not exceed label dosage rates. This product cannot be mixed with any product containing a label prohibition against such mixing.

**Notice to User:** Plant sensitivities to SPU-02720-F have been found to be acceptable for the specific genera and species listed on this label under the conditions tested. However, phytotoxicity may occur. Due to the large number of species and varieties of ornamental and nursery plants, and the wide range of growing conditions, it is impossible to test every one for sensitivity to SPU-02720-F. Neither the manufacturer nor seller has determined whether or not SPU-02720-F can be safely used on ornamental or nursery plants not listed on this label. The user must determine if SPU-02720-F can be used safely prior to commercial use. In a small area, apply the specified rates to the plants in question, i.e., bedding plants, foliage, etc., and observe for 7 to 10 days for symptoms of phytotoxicity prior to commercial use.

**NOTE:** This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.

**Restrictions:** Minimum retreatment interval is 7 days. Maximum annual rate for Easter Lilies is 75 lbs. metallic copper (214 lbs. product). For Easter Lilies, do not add additional copper pesticides to this land for 36 months. Maximum annual rate for Ornamentals (except Easter Lilies) is 20 lbs. metallic copper (57.14 lbs. product). This product cannot be mixed with any product containing a label prohibition against such mixing. This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.

Leyland Cypress*	X Cupressocyparis leylandii	Cercospora Needle Blight
Lilac	Syringa spp.	Cercospora Leaf Spot, Pseudomonas Blight*
Lily, Easter⁵	Lilium longiflorum	Botrytis Blight
Linden*	Tilia spp.	Anthracnose, Leaf Blight
Loblolly Bay	Gordonia lasianthus	Anthracnose
Loquat	Eriobotrya japonica	Colletotrichum spp., Entomosporium maculata
Magnolia (Southern)	Magnolia grandiflora	Algal Leaf Spot, Anthracnose, Bacterial Leaf Spot
Magnolia (Sweet Bay)	Magnolia virginiana	Anthracnose
Magnolia (Oriental)	Magnolia soulangiana	Bacterial Leaf Spot
Mandevilla	Mandevilla spp.	Anthracnose
Maple*	Acer spp.	Pseudomonas Leaf Blight
Marigold Mountain-Ash*	Tagetes spp.	Alternaria Leaf Spot, Botrytis Leaf Rot, Cercospora Leaf Spot, Flower Rot
Mulberry, Contorted*	Sorbus spp. Morus bombycis	Fire Blight Bacterial Leaf Spot
Mulberry, Weeping	Morus alba	Bacterial Leaf Spot
Narcissus*	Narcissus spp.	Leaf Blight
Nephthytis*	Syngonium podophyllum	Bacterial Leaf Spot
Oak*	Quercus spp.	Leaf Spots
Oak, Laurel	Quercus laurifolia	Algal Leaf Spot (Cephaleuros virescens)
Oleander	Nerium oleander	Bacterial Leaf Spot, Fungal Leaf Spot
Oregon Grapeholly*	Mahonia aquifolium	Leaf Spots
Pachysandra	Pachysandra procumbens	Volutella Leaf Blight
Palm, Date	Phoenix canariensis	Pestalotia Leaf Spot
Palm, European Fan	Chamaerops humilis	Pestalotia Leaf Spot
Palm, Parlor*	Chamaedorea elegans	Bacterial Leaf Spot
Palm, Queen	Arecastrum romanzoffianum	Exosporium Leaf Spot, Phytophthora Bud Rot
Palm, Washingtonia	Washingtonia robusta	Pestalotia Leaf Spot
Peach (Flowering)6*	Prunus spp.	Bacterial Blast, Brown Rot, Fire Blight
Pear (Flowering)	Pyrus calleryana	Fire Blight, Leaf Spots
Pentas (Egyptian Star)	Pentas spp.	Bacterial Leaf Spot (Pseudomonas spp.*, Xanthomonas spp.)
Peony Periwinkle	Paeonia spp. Catharanthus roseus, Vinca spp.	Botrytis Blight
Periwinkle Philodendron	Philodendron selloum	Phomopsis Stem Blight Bacterial Leaf Spot
Philodenaron Philox	Philodenaron selloum Philox spp.	Alternaria Leaf Spot
Photinia (Red Tip)	Photinia x fraseri, P. glabra	Anthracnose, Entomosporium Leaf Spot
Pine*	Pinus spp.	Needlecasts
Pistachio	Pistacia chinensis	Anthracnose
Plantain Lily <sup>4</sup>	Hosta spp.	Bacterial Leaf Spot
Plum (Flowering) <sup>6*</sup>	Prunus spp.	Bacterial Blast, Brown Rot, Fire Blight
Pothos*	Scindapsus spp.	Bacterial Leaf Spot
Powder Puff Plant	Calliandra spp.	Bacterial Leaf Spot
Pyracantha	Pyracantha spp.	Fire Blight, Scab
Rhododendron	Rhododendron spp.	Alternaria Flower Spot
Rose <sup>1</sup>	Rosa spp.	Black Spot, Powdery Mildew
Snapdragon	Antirrhinum majus	Anthracnose, Dieback, Downy Mildew
Spathe Flower*	Spathiphyllum spp.	Bacterial Leaf Spot
Spirea*	Spiraea spp.	Fire Blight
Spruce*	Picea spp.	Needlecasts
Sycamore	Platanus spp.	Anthracnose, Leaf Spots*
Tulip	Tulipa spp.	Anthracnose, Botrytis Blight
Umbrella Tree*	Schefflera spp.	Bacterial Leaf Spot
Verbena	Verbena spp.	Xanthomonas Leaf Spot
	Viburnum odoratissimum, V.	

ORNAMENTALS		
Viola (Pansy, Violet)	Viola spp.	Downy Mildew
Willow	Salix spp.	Anthracnose
Yew*	Taxus spp.	Needle Blight
Crop	Scientific Name	Disease
Yucca (Adam's Needle)	Yucca spp.	Cercospora Leaf Spot, Septoria Leaf Spot
Zinnia*	Zinnia spp.	Leaf Spots

<sup>1</sup>Discoloration of foliage and/or blooms have been noted on some varieties. To prevent residues on commercial plants, do not spray immediately before selling season. <sup>2</sup>Hibiscus – Do not apply to plants in flower.

<sup>3</sup>For Indian Hawthorn use 0.85 – 1.71 pounds per acre (0.3 - 0.6 pounds metallic copper). In California, use only the high rate.

<sup>4</sup>Some cultivars may be sensitive to SPU-02720-F.

<sup>5</sup>Apply SPU-02720-F at 1.28 to 2.14 pounds (0.45 - 0.75 pounds metallic copper) per acre. Maximum annual rate per acre is 214 pounds (75 pounds metallic copper). Do not apply any additional copper pesticide to this land for 36 months. In California, use only the high rate.

<sup>6</sup>Apply dormant through bloom only. \*Not registered for use in California

\*Not registered for use in California.

**NOTE:** Phytotoxicity may depend on varietal differences. If unfamiliar with the use of SPU-02720-F, apply the specified rate to a few plants and observe after 7 to 10 days for symptoms of phytotoxicity.

**Control of Ball Moss\*, Spanish Moss\* and Lichens\* on Ornamental and Shade Trees:** Apply SPU-02720-F in early spring when the trees are dormant. Apply 2.57 - 3.42 pounds SPU-02720-F (0.9 - 1.2 pounds metallic copper) in 100 gallons of water, using 1.5 gallons of spray per foot of tree height. Do not apply more than 5.7 lbs product (2 lbs metallic copper) per acre. Be sure to thoroughly wet ball moss tufts, Spanish moss or lichens. The addition of a non-ionic surfactant will improve control. A second application may be required after 12 months.

**NOTE:** SPU-02720-F may be injurious to some ornamental plants growing beneath the trees. This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.

**Cold Storage Protection for Dormant Rootstock\*:** To protect bare-root nursery trees from Phytophthora Crown Rot and Botrytis, use 1.28 – 1.71 pounds SPU-02720-F (0.45 - 0.6 pounds metallic copper) per 100 gallons of water. Apply as a dip or spray to the roots and lower stems of dormant rootstock prior to placing in cold storage. Do not apply to rootstock less than 2 years old.

#### TURF (Non-Residential)

For control of algae in turfgrasses on sod farms, golf courses, cemeteries, and industrial turf areas. Apply 4.85 to 8.57 pounds (1.7 - 3 lbs. metallic copper) per acre (2.4 to 4.28 oz. per 1000 square feet). Apply in sufficient water to provide adequate coverage. SPU-02720-F may be used alone or in combination with other registered turf fungicides as a maintenance spray. Observe all precautions and limitations on the label of each product used in tank mixes.

**Restrictions:** Minimum retreatment interval is 10 days. Maximum single application rate is 8.57 lbs. per acre (3 lbs metallic copper equivalent). Maximum annual application rate is 60 pounds per acre (21 pounds metallic copper equivalent).

**NOTE:** Phytotoxicity may occur depending on varietal differences. Apply the recommended rate to a small area and observe for 7 to 10 days for signs of injury. If phytotoxicity occurs, discontinue use. Do not apply in spray solutions with a pH of less than 6.5.

# STORAGE AND DISPOSAL

Do not contaminate water, food or feed by storage or disposal.

**PESTICIDE STORAGE:** Store in a cool, dry place.

**PESTICIDE DISPOSAL:** Wastes resulting from the use of this product may be disposed of on site or at an appropriate waste disposal facility.

CONTAINER HANDLING:

Nonrefillable Plastic Bags or Paper Sacks with Plastic Bag Liners: Nonrefillable container. Do not reuse or refill this container. Completely empty paper or plastic bag, fiber sack or drum liner by shaking and tapping sides and bottom to loosen clinging particles. Empty residue into application or manufacturing equipment. Then offer for recycling if available or dispose of empty paper or plastic bag, fiber sack or fiber drum and liner in a sanitary landfill, or by incineration. Do not burn.

# LIMITATION OF WARRANTY AND LIABILITY

NOTICE: Read this Limitation of Warranty and Liability Before Buying or Using This Product. If the Terms Are Not Acceptable, Return the Product at Once, Unopened, and the Purchase Price Will Be Refunded.

It is impossible to eliminate all risks associated with the use of this product. Such risks arise from weather conditions, soil factors, off target movement, unconventional farming techniques, presence of other materials, the manner of use or application, or other unknown factors, all of which are beyond the control of Spiess-Urania. These risks can cause: ineffectiveness of the product, crop injury, or injury to non-target crops or plants. WHEN YOU BUY OR USE THIS PRODUCT, YOU AGREE TO ACCEPT THESE RISKS.

Spiess-Urania warrants that this product conforms to the chemical description on the label thereof and is reasonably fit for the purpose stated in the Directions for Use, subject to the inherent risks described above, when used in accordance with the Directions for Use under normal conditions.

TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, SPIESS-URANIA MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS OR OF MERCHANTABILITY OR ANY OTHER EXPRESS OR IMPLIED WARRANTY. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, IN NO EVENT SHALL SPIESS-URANIA OR SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT. BUYER'S OR USER'S BARGAINED-FOR EXPECTATION IS CROP PROTECTION. TO THE EXTENT CONSISTENT WITH APPLICABLE LAW, THE EXCLUSIVE REMEDY OF THE USER OR BUYER AND THE EXCLUSIVE LIABILITY OF SPIESS-URANIA OR SELLER, FOR ANY AND ALL CLAIMS, LOSSES, INJURIES OR DAMAGES (INCLUDING CLAIMS BASED ON BREACH OF WARRANTY OR CONTRACT, NEGLIGENCE, TORT OR STRICT LIABILITY), WHETHER FROM FAILURE TO PERFORM OR INJURY TO CROPS OR OTHER PLANTS, AND RESULTING FROM THE USE OR HANDLING OF THIS PRODUCT, SHALL BE THE RETURN OF THE PURCHASE PRICE OF THE PRODUCT, OR AT THE ELECTION OF SPIESS-URANIA OR SELLER, THE REPLACEMENT OF THE PRODUCT.

To the extent consistent with applicable law that allows such requirement, Spiess-Urania or your Ag Retailer must have prompt notice of any claim so that an immediate inspection of buyer's or user's growing crops can be made. Buyer and all users shall promptly notify Spiess-Urania or your Ag Retailer of any claims, whether based on contract, negligence, strict liability, other tort or otherwise, or be barred from any remedy.

This Limitation of Warranty and Liability may not be amended by any oral or written agreement.
