A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. Pursuant to 40 CFR 156.10(a)(6) you must submit one copy of the final printed labeling before you release the product for shipment with the new labeling. In accordance with 40 CFR 152.130(c), you may distribute or sell this product under the previously approved labeling for 12 months from the date of this letter. DIRECTIONS FOR USE

It is a violation of federal law to use this product in a manner inconsistent with its labeling. For use in pools, spas and hot tubs, do not apply this product in a way that will contact adults, children or pets.

PRISTINE BLUE II is used to control algae and to suppress nonpublic health bacteria and bacteria that cause odor problems in pools, spas and hot tubs.

Treated pool effluent should not be discharged where it will drain into lakes, streams, ponds or public water.

USE IN CONTROL ALGAE, NONPUBLIC HEALTH BACTERIA, AND BACTERIA THAT CAUSE ODOR PROBLEMS IN SWIMMING POOLS, SPAS AND HOT TUBS

The product may be applied throughout the year but for best results apply in the late spring or early summer when algae first appear.

Discharge Directions for [Commercial] and [Residential] [Pool,] [Spa,] [Hot Tub,] and [Fountain] Uses

Before draining a treated [pool,] [spa,] [hot tub,] or [fountain] contact your local sanitary sewer and storm drain authorities and follow their discharge instructions. Do not discharge treated pool or spa water to any location that flows to a gutter, storm drain or natural water body unless discharge is allowed by state and local authorities.

APPLICATION INSTRUCTIONS

FOR POOLS: Apply at the rate of 2 fluid ounces of PRISTINE BLUE II per 1,000 gallons of water (20 fluid ounces per 10,000 gallons).

FOR SPAS AND HOT TUBS: Apply at the rate of 6 mL of PRISTINE BLUE II per 100 gallons of water using supplied measuring cup.

These dosages will yield a rate of 0.9 ppm metallic copper.

Test the copper level every 14 days using a standard commercial swimming pool copper test kit. Add PRISTINE BLUE II to raise level back to 0.9 ppm [(see tables)]. The amount of PRISTINE BLUE II to be added is proportional to the starting concentration and volume of water. Do not exceed 1.0 ppm metallic copper.

[Optional tables] MAINTAINING METALLIC COPPER CONCENTRATION IN POOLS AND SPAS

The dosages are variable and depend upon algae species, water hardness, water temperature, and amount of algae present. Preferably, the water should be clear with temperature above 60° F [(15.6° C)]. Higher dosages are required at lower water temperatures, higher algae concentrations, and for hard waters.
