- Dormant applications on orchard crops are restricted to ground application equipment only.
- Do not apply within 100 feet upslope of "sensitive aquatic sites" such as any irrigation
  ditch, drainage canal or body of water that may drain into a river or tributary unless a
  suitable method is used to contain or divert runoff waters. Waters that are contained or

  NOAA/NWS, (National Weather Service) to occur within 48 hours following application.
- Make dormant applications only when insect scouting information or the recommendation
  of a Pest Control Advisor indicate treatment is required. (See UC IPM Guidelines for
  San Jose Scale in stone fruits and almonds and aphids in stone fruits. Use the prune
  dormant spur sampling program to determine need for a dormant treatment in that crop).
- Apply only when wind speed is 3- 10 mph at the application site as measured by an
  anemometer outside of the orchard on the side nearest and upwind from a sensitive site.
- When sensitive aquatic sites are downwind from orchards, spray the first three rows
  nearest the sensitive aquatic sites only when the wind is blowing away from the sites.
  The row at the edge of the field next to sensitive aquatic sites must be sprayed with the
  outside nozzles turned off. Spray must not be directed higher than the tree canopy and
  spray must be directed away from sensitive aquatic sites.
- The Stewardship Bulletin "Orchard Practices for Protecting Surface Water", must be available to handlers and equipment operators at the application site during all application activities. (note: Bulletin available through CURES)
