Kelly Powell Makhteshim Agan of North America, Inc. (d/b/a ADAMA) 3120 Highwoods Blvd., Suite 100 Raleigh, NC 27604

Subject:

Label Amendment (adding me-too use on perennial tropical and sub-tropical fruit trees, revise tank mix directions, reformat label) Supplemental Labels (Perennial Tropical and Sub-tropical Fruit Trees) (Tank Mix Directions)

Parazone 3SL EPA Reg. No. 66222-130 Application Dated May 16, 2014

Dear Ms. Powell:

The main and supplemental labels referred to above, submitted in connection with registration under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), as amended, are acceptable.

Stamped copies of the labels are enclosed for your records. The main label supersedes all previously accepted labels. You must submit one (1) copy of the final printed label before you release the product for shipment. Products released for shipment after eighteen (18) months from the date of this letter must bear the new revised label. If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA §6(e). Your release for shipment of the product constitutes acceptance of these conditions.

A stamped copy of your labeling is enclosed for your records. This labeling supersedes all previously accepted labeling. You must submit one (1) copy of the final printed labeling before you release the product for shipment with the new labeling. In accordance with 40 CFR 152.130(c), you may distribute or sell this product under the previously approved labeling for 18 months from the date of this letter. After 18 months, you may only distribute or sell this product if it bears this new revised labeling or subsequently approved labeling. "To distribute or sell" is defined under FIFRA section 2(gg) and its implementing regulation at 40 CFR 152.3. (emphasis added)

If you have any questions, please contact Mindy Ondish at (703)605-0723 or at ondish.mindy@epa.gov.

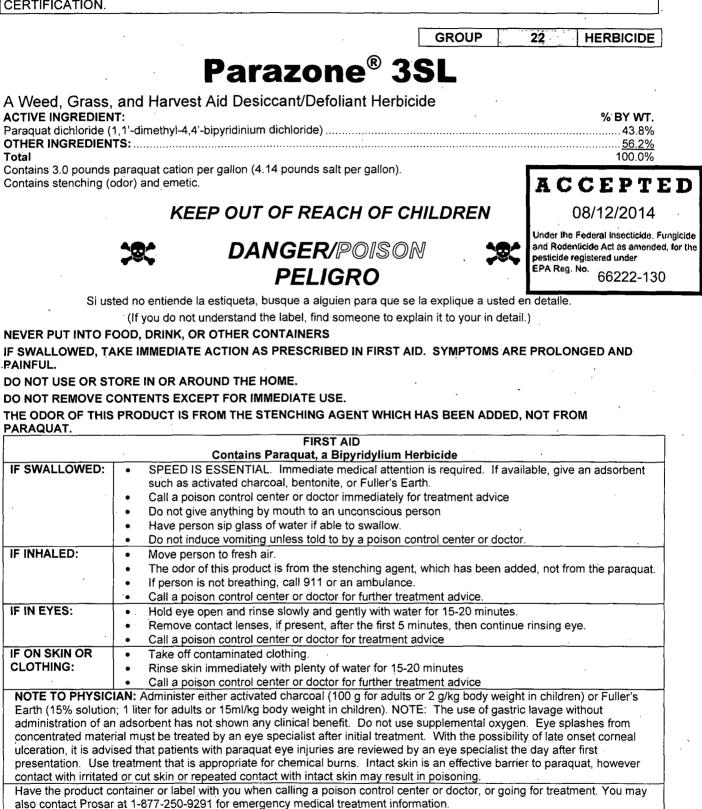

Sincerely,

Kable Bo Davis Product Manager 25 Herbicide Branch Registration Division (7505P) Office of Pesticide Programs

# **RESTRICTED USE PESTICIDE**

DUE TO ACUTE TOXICITY

FOR RETAIL SALE TO AND USE ONLY BY CERTIFIED APPLICATORS OR PERSONS UNDER THEIR DIRECT SUPERVISION AND ONLY FOR THOSE USERS COVERED BY THE CERTIFIED APPLICATOR'S CERTIFICATION.

Manufactured for: Makhteshim Agan of North America, Inc. (d/b/a ADAMA) 3120 Highwoods Blvd., Suite 100 Raleigh NC 27604

#### PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS DANGER/ PELIGRO

May be fatal if swallowed. Fatal if inhaled. Do not breathe spray mist. Wear a dust/mist respirator as specified in the PPE section of this label. Causes irreversible eye damage. Wear protective eyewear. Harmful if absorbed through skin. Do not get in eyes or on clothing. Avoid contact with skin.

**IMPORTANT:** Inhalation is an unlikely route of exposure due to low vapor pressure and large spray droplet size, but mucosal irritation or nose bleeds may occur. Prolonged contact with this concentrated product can irritate your skin.

#### PERSONAL PROTECTIVE EQUIPMENT (PPE)

#### Applicators and other handlers (other than mixers and loaders) must wear:

- Long-sleeve shirt and long pants
- Shoes plus socks
- Protective eyewear
- Chemical Resistant Gloves made out of materials such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC), or Viton
- A NIOSH-approved particulate filtering respirator equipped with N, R, or P, filter media. The respirator should have a NIOSH approval number prefix TC-84A.

#### Mixers and loaders must wear:

- Long-sleeve shirt and long pants
- Shoes plus socks
- Dust mist NIOSH-approved respirator with any N, R, P, or HE filter
- Chemical Resistant Gloves made out of materials such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC) or Viton
- Chemical resistant apron
- Face Shield

Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them.

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and hot water. Keep and wash PPE separately from other laundry.

#### ENGINEERING CONTROLS

When handlers use closed systems, enclosed cabs, or aircraft in a manner that meets the requirements listed in the Worker Protection Standard (WPS) for agricultural pesticides [40 CFR 170.240(d)(4-6)], the handler PPE requirements may be reduced or modified as specified in the WPS.

#### Users should:

#### USER SAFETY RECOMMENDATIONS

- Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet.
- Remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.
- Remove PPE immediately after handling this product. Wash the outside of gloves before removing. Wash thoroughly
  with soap and water and change into clean clothing.
- Remove and wash contaminated clothing before reuse.

#### ENVIRONMENTAL HAZARDS

1 7 38

This product is toxic to wildlife. Do not apply directly to water, or to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash waters or rinsate.

Parazone 3SL is a contact herbicide that desiccates all green plant tissue. Paraquat dichloride, the active ingredient in this product, is toxic to nontarget crops and plants if off-target movement occurs because it desiccates all green plant tissue. Extreme care must be taken to ensure that off-target drift is minimized to the greatest extent possible. Refer to the local and state laws, regulations, guidelines, and spray drift information contained in the "Directions for Use" section for proper application to avoid off-target movement. Do not apply under conditions involving possible drift to food, forage, or other plantings that might be damaged or the crops thereof rendered unfit for sale, use, or consumption. Do not apply when weather conditions favor drift from treated areas. To avoid drift, do not make aerial applications during periods of thermal inversion.

#### PHYSICAL AND CHEMICAL HAZARDS

This product is mildly corrosive to aluminum and produces hydrogen gas which] form a highly combustible gas mixture. Do not mix or store in containers, spray tanks, nurse tanks, or such systems made of aluminum or having aluminum fittings. This product is compatible with high density polyethylene and rubber lined steel containers.

#### DIRECTIONS FOR USE

#### Restricted use pesticide

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. Read all label directions before using this product.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the agency responsible for pesticide regulation.

DO NOT USE AROUND HOME GARDENS, SCHOOLS, RECREATIONAL PARKS, GOLF COURSES, OR PLAYGROUNDS.

#### AGRICULTURAL USE REQUIREMENTS

Use this product only in accordance with its labeling and with the Worker Protection Standard, 40 CFR Part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, and greenhouses, and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification, and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE) and restricted-entry interval. The requirements in this box only apply to uses of this product that are covered by the Worker Protection Standard.

For Chemical Fallow, Early Postemergence Broadcast in Peanuts and Dormant Season Applications, and "Between Cutting" Applications in Alfalfa: Do not enter or allow worker entry into the treated areas during the restricted-entry interval (REI) of 12 hours.

For Harvest Aid and Desiccation Applications, Preplant or Preemergence (Broadcast or Banded), and Postemergence Directed Spray: Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours.

PPE required for early entry to treated areas that is permitted under the Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, or water is:

- Coveralls
- Shoes plus socks
- Protective eyewear
- Chemical Resistant Gloves made out of materials such as barrier laminate, butyl rubber, nitrile rubber, neoprene rubber, natural rubber, polyethylene, polyvinyl chloride (PVC), or Viton

#### NON-AGRICULTURAL USE REQUIREMENTS

The requirements in this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

**DO NOT** enter or allow others to enter the treated areas until sprays have dried. **AVOID** working in spray mist. Keep all unprotected persons out of operating areas or vicinity where there may be danger of drift. Certain states may require more restrictive reentry intervals; consult your State Department of Agriculture for further information.

#### **PRODUCT INFORMATION**

The Parazone 3SL formulation contains 3 pounds of active ingredient per gallon. Parazone 3SL has a strong nontoxic odor and contains an emetic which will cause vomiting if the product is accidentally swallowed. The strong odor is intentionally part of the formulation to help prevent accidental ingestion of Parazone 3SL.

Parazone 3SL is a contact herbicide that is rapidly absorbed by green plant tissue. Once absorbed the active ingredient interacts with the photosynthetic process to produce superoxides that destroy the plant cells. Parazone 3SL must be applied to green plant tissue to be effective; therefore, excellent and complete coverage of all green foliage is necessary for effective weed control and effective leaf drop, desiccation and defoliation. Activity of Parazone 3SL is reduced when it is applied to drought-stressed weeds, weeds with little green foliage or to the mature woody bark of trees and vines. Parazone 3SL is tied up rapidly by clay soils and organic matter so it has no residual soil activity.

7,38

As a contact herbicide, Parazone 3SL will control most small broadleaf and grass weeds, as well as suppress perennial weeds through the destruction of green foliage. Parazone 3SL can also be used at harvest as a desiccant or defoliant.

Best weed control is achieved when Parazone 3SL is applied to emerged weeds that are still small (1 to 6 inches tall). Larger weeds are more difficult to control. Allow weeds that have been grazed or mowed to grow to 2 to 4 inches tall before applying Parazone 3SL. Also, during harvesting of forage or grain crops before spraying, weeds present in the field are also cut. Therefore, raise cutter bars as high as possible from the ground to cut stubble and weeds at a greater height allowing sufficient green foliage to remain for applications.

When Parazone 3SL is used for control of grass cover crops or volunteer cereals, application must be made prior to tillering or after the boot stage especially with a wheat cover crop or volunteer wheat. Application of Parazone 3SL between tillering and the boot stage may not provide acceptable control. Parazone 3SL will not provide complete control of perennial cover crops.

#### **RESISTANCE MANAGEMENT**

Parazone 3SL is a Group 22 herbicide based on the mode of action classification system of the Weed Science Society of America and a Group D, photosystem-I-electron diversion herbicide as classified by the Herbicide Resistant Action Committee (HRAC). Any weed population may contain or develop plants naturally resistant to Parazone 3SL and other Group 22 herbicides. Weed species with natural or acquired resistance to Group 22 may eventually dominate the weed population if Group 22 herbicides are used repeatedly in the same field or in successive years as the primary method of control for targeted species. Such resistant weed plants may not be effectively managed using Group 22 herbicides but may be effectively managed utilizing another herbicide alone or in mixtures from a different Group and/or by using cultural or mechanical practices. However, the herbicide mode of action classification by itself may not adequately address specific weeds that are resistant to specific herbicides.

To delay herbicide resistance, consider using diversified weed control strategies to minimize selection for weed populations resistant to one or more herbicides:

- Avoiding the consecutive use of Parazone 3SL or other target site of action Group 22 herbicides that might have a similar target site of action, on the same weed species.
- Using tank mixtures or premixes with herbicides from different target site of action Groups as long as the involved
  products are all registered for the same use, have different sites of action and are both effective at the tank mix or
  premix rate on the weed(s) of concern.
- Base herbicide use on a comprehensive Integrated Pest Management (IPM) and Integrated Resistance Management (IRM) program.
- Use labeled rate and directions for use to delay selection for resistance.
- Monitor treated weed populations to facilitate the early identification of weeds shifts and/or weed resistance development (also provides direction on future weed management practices).
- Control escaped weeds by implementing measures to avoid allowing weeds to reproduce by seed or to proliferate vegetatively is one of the best ways to contain resistant populations.
- Contact your local extension specialist, certified crop advisor, and/or manufacturer for herbicide resistance
  management and/or integrated weed management recommendations for specific crops and resistant weed biotypes.

#### **PRODUCT RESTRICTIONS**

- Always read and follow label directions of all products. Always follow the most restrictive label language for all
  products whether used alone or in a tank mix. The most restrictive label language of any product used applies in tank
  mixtures, including all crop rotational and other crop restrictions
- **Replanting**: Rotational crops can be planted after the last application of Parazone 3SL. Since Parazone 3SL has no soil activity, crops, planted after the last application, are not affected.
- Do not graze livestock in treated fields or feed treated foliage in cotton when using Parazone 3 SL for a cotton harvest aid.
- Use around home gardens, schools, recreational parks, or playgrounds is PROHIBITED.
- Do not apply to soils lacking clay, i.e., peat, muck, pure sand and artificial planting media if using Parazone 3SL in preplant or preemergence (to the crop) uses.
- Prepare seedbeds and plantbeds well ahead of planting and treatment to permit maximum weed and grass emergence prior to treatment.
- Do not disturb the soil any more than necessary during seeding or transplanting.
- Use caution when applying Parazone 3SL for preplant weed control over the top of plastic mulch. Transplants may
  be damaged if they come in contact with treated plastic mulch. Sprinkler irrigation or rainfall may be needed to wash
  off the herbicide from the plastic to prevent damage to the crop.

- Parazone 3SL will not control or suppress broadleaf or grassy weeds that emerge after treatment.
- Unless otherwise indicated crop plants that are emerged at the time of application and contacted by sprays of Parazone 3SL will be injured or killed.

6-2 38

- Equipment: Since Parazone 3SL is corrosive to aluminum, all aluminum spray equipment and aluminum aircraft structures exposed to spray solution or spray drift must be flushed with water immediately after use.
- **Dusty Leaf Surfaces:** If weed or plant leaves are extremely dusty, (due to high winds, equipment tires, etc.) activity of Parazone 3SL can be reduced. Avoid applying Parazone 3SL in extremely dusty conditions.
- **CHEMIGATION STATEMENT:** Do not apply this product through any type of irrigation system.

#### APPLICATION PROCEDURES

#### ADJUVANT OR CROP OIL CONCENTRATE

Parazone 3SL herbicide does not contain an adjuvant system. Crop oil concentrate (COC) provides the most consistent activation of Parazone 3SL. Crop oil concentrates can cause crop injury with certain tank-mix partners or on sensitive crops. Under these circumstances non-ionic surfactants (NIS) can be used in replace of crop oil concentrate. Reduced weed control may result from use of non-ionic surfactant. Under drought conditions methylated seed oil adjuvants can be used in replacement of COC. Methylated seed oils can increase crop injury potential and care should be taken when considering its use. Ammonium sulfate (AMS) or urea-ammonium initrate (UAN) can improve control of hard to control grasses and help overcome potential antagonism from tank-mix partners. The use of AMS or UAN is only allowed on specified crops.

It is important to always add a nonionic surfactant (NIS) or crop oil concentrate (COC) with Parazone 3SL. Otherwise, reduced activity of Parazone 3SL will result.

For ground applications, use a NIS containing 75% or more active ingredient at 0.125% v/v (1 pt/100 gals), OR use a NIS containing 50-74% active ingredient at 0.25% v/v (2 pts/100 gals.) of finished spray volume. If a COC is used, select a nonphytotoxic COC containing 15-20% approved emulsifier at 1.0% v/v (1 gal/100 gals) of finished spray volume.

Do not use a COC with Parazone 3 SL when it is applied as a cotton harvest aid.

For aerial applications, use a NIS at 0.25% v/v (2 pts/100 gals) of the finished spray volume. Or, use a COC at 1 pint per acre. Do not use a COC with Parazone 3 SL when it is applied as a cotton harvest aid.

When an adjuvant is to be used with this product, ADAMA suggests the use of a Chemical Producers and Distributors Association certified adjuvant.

**Weather Considerations:** Although Parazone 3SL is effective under most environmental conditions, some conditions such as cool weather (below 55°), cloudy or overcast weather will slow its activity. Parazone 3SL is rapidly absorbed by plant foliage and becomes rainfast soon after application. If rain comes 30 minutes or more after application, activity of Parazone 3SL will not be affected.

**Dosage:** Specific application rates for Parazone 3SL are provided below under **APPLICATION INSTRUCTIONS**. Always follow the specified rates listed for each use. Higher label rates must be used to control or suppress large or dense weeds. Also, when using Parazone 3SL as a harvest aid, use the higher label rates when crop vegetation is dense. For broadcast application with backpack sprayers, do not exceed more than 0.50 lb ai/A in a minimum of 30 gallons of spray solution per acre.

**Application:** <u>Thorough coverage</u> of target weeds is critical for good weed control since Parazone 3SL is a contact herbicide. Thorough coverage is also critical for good crop desiccation and defoliation. Unacceptable weed control, desiccation or defoliation will result from poor coverage and application to large, stressed or mown weeds. Specific application instructions are provided below.

<u>Spray volume</u> varies with different uses. Always follow the spray volume instructions provided in the **APPLICATION INSTRUCTIONS**. Only minimum spray volumes are provided. Increase spray volumes to insure thorough coverage of target weeds or plants without runoff from the foliage. If a spray volume of 20 gallons of spray carrier per acre is used, target weeds must not exceed 6 inches tall.

<u>Spray carrier</u> selection is very important to maximize effectiveness of Parazone 3SL. Always use clean water (no mud or clay), clear liquid nitrogen, or complete clear liquid fertilizers with Parazone 3SL. Fertilizers or water containing clay can inactivate Parazone 3SL. It is important, therefore, to never use muddy water or suspension type fertilizers containing clay as the spray carrier. Use the higher rate of Parazone 3SL and surfactant when the spray carrier is a clear liquid fertilizer containing high levels of phosphate. Always use a nonionic surfactant when using liquid fertilizers such as 28% N as a spray carrier. Liquid fertilizer carriers cannot substitute for surfactant.

<u>Nozzle selection</u> is very important when making applications of Parazone 3SL. Flat-fan nozzles provide the most effective application, whereas flood nozzles are usually not as good because they produce large uneven droplets. Inadequate coverage and reduced weed control can occur if flood nozzles are used. Only use flat fan nozzles if the spray carrier is less than 20 gallons per acre. Information on nozzles, pressures and setup are shown in the **Application Setup** table.

When Parazone 3SL is applied at less than 10 gallons of finished spray volume per acre, a drift control or spray deposition additive must be used. Refer to the additive label for use directions.

#### Application Setup\*

Nozzle Type	Maximum Size	Spray Pressure (at nozzle)	Maximum Nozzle Spacing	Direction Of Spray Pattern	Maximum Speed	Spray Overlap (at each edge)
Flat Fan	8	30-50 psi	30"	Down	10 mph	30%
Flood	15	30-50 psi	. 40"	Down	10 mph	50%

7.738

**Spot Spraying:** Sometimes it is necessary to spray small areas with labeled applications. To accomplish this, it may be necessary to mix small quantities of Parazone 3 SL.

If the Broadcast rate per acre for Parazone 3SL Herbicide is:	Add the Following Amount of Parazone 3SL Herbicide to 1 gallon of water
1 1/2 pints	, 1/3 fluid ounce
2 pints	3/8 fluid ounce
2 1/2 pints	1/2 fluid ounce
3 pints	2/3 fluid ounce

Always add 1/3 to 1/2 fl oz of NIS to each gallon of spray. During the spot spraying operation, spray plants thoroughly in order to wet the foliage, but not to the point of runoff.

#### SPRAY DRIFT MANAGEMENT

Avoiding spray drift at the application site is the responsibility of the applicator and the grower. The interaction of many equipment- and weather-related factors determine the potential for spray drift. The applicator and the grower are responsible for considering all these factors when making decisions regarding spraying.

The following drift management requirements must be followed to avoid off-target drift movement from aerial applications to agricultural field crops. These requirements do not apply to forestry applications, public health uses or to applications using dry formulations.

- The distance of the outer most nozzles on the boom must not exceed 3/4 the length of the wingspan or rotor.
- Nozzles must always point backward parallel with the air stream and never be pointed downwards more than 45°.

Where states have more stringent regulations, they shall be observed.

The applicator must be familiar with and take into account the information covered in the Spray Drift Management section.

To avoid spray drift, do not apply under windy conditions. Avoid spray overlaps as crop injury may result.

#### Information on Droplet Size

The most effective way to reduce drift potential is to apply large droplets. The best drift management strategy is to apply the largest droplets that provide sufficient coverage and control. Applying larger droplets reduces drift potential, but will not prevent drift if applications are made improperly, or under unfavorable environmental conditions (see **Wind, Temperature and Humidity,** and **Temperature Inversions**).

Controlling Droplet Size

- Volume-Use high flow rate nozzles to apply the highest practical spray volume. Nozzles with higher rated flows produce larger droplets.
- Pressure-Do not exceed the nozzle manufacturer's specified pressures. For many nozzle types lower pressure
  produces larger droplets. When higher flow rates are needed, use higher flow rate nozzles instead of increasing
  pressure.
- Number of nozzles-Use the minimum number of nozzles that provide uniform coverage.
- Nozzle Orientation-Orienting nozzles so that the spray is released parallel to the airstream produces larger droplets than other orientations and is the recommended practice. Significant deflection from horizontal will reduce droplet size and increase drift potential.
- **Nozzle Type**-Use a nozzle type that is designed for the intended application. With most nozzle types, narrower spray angles produce larger droplets. Consider using low-drift nozzles. Solid stream nozzles oriented straight back produce the largest droplets and the lowest drift.

#### Boom Length

For some use patterns, reducing the effective boom length to less than  $\frac{3}{4}$  of the wingspan or rotor length may further reduce drift without reducing swath width.

#### **Application Height**

Applications should be made at the lowest height consistent with efficacy and flight safety. Do not make at a height greater than 10 feet above the top of the largest plants unless a greater height is required for aircraft safety. Making application at the lowest height that is safe reduces exposure of droplets to evaporation and wind.

#### Swath Adjustment

When applications are made with a crosswind, the swath will be displaced downwind. Therefore, on the up and downwind edges of the field, the applicator must compensate for this displacement by adjusting the path of the aircraft upwind. Swath adjustment distance must increase with increasing drift potential (higher wind, smaller drops, etc.)

8238

#### Wind

Drift potential is lowest between wind speeds of 2-10 mph. However, many factors, including droplet size and equipment type determine drift potential at any given speed. Application must be avoided below 2 mph due to variable wind direction and high inversion potential. **NOTE**: Local terrain can influence wind patterns. Every applicator must be familiar with local wind patterns and how they affect spray drift.

#### Temperature and Humidity

When making applications in low relative humidity, set up equipment to produce larger droplets to compensate for evaporation. Droplet evaporation is most severe when conditions are both hot and dry.

#### **Temperature Inversions**

Applications must not occur during a temperature inversion because drift potential is high. Temperature inversions restrict vertical air mixing, which causes small suspended droplets to remain in a concentrated cloud. This cloud can move in unpredictable directions due to the light variable winds common during inversions. Temperature inversions are characterized by increasing temperatures with altitude and are common on nights with limited cloud cover and light to no wind. They begin to form as the sun sets and often continue into the morning. Their presence can be indicated by ground fog; however, if fog is not present, inversions can also be identified by the movement of smoke from a ground source or an aircraft smoke generator. Smoke that layers and moves laterally in a concentrated cloud (under low wind conditions) indicates an inversion, while smoke that moves upward and rapidly dissipates indicates good vertical air mixing.

#### Sensitive Areas

The pesticide must only be applied when the potential for drift to adjacent sensitive areas (e.g., residential areas, bodies of water, known habitat for threatened or endangered species, non-target crops) is minimal (e.g., when wind is blowing away from the sensitive areas).

#### MIXING PROCEDURES

When tank mixing other products with Parazone 3SL, the following order must be followed:

- 1. Fill spray tank 1/2 full with clean water or other approved carriers;
- 2. Begin tank agitation and continue agitation throughout the mixing and spraying operations;
- 3. Add dry formulations (i.e. WP, DF, WDG, etc.) to the tank;
- 4. Add liquid formulations (i.e. SC, EC, L, F, etc.) to the tank other than fomesafen (i.e. Rumble, Vise, Reflex, etc.);
- 5. Add Parazone 3SL to the tank;
- 6. Add fomesafen formulation (i.e. Rumble, Vise, Reflex, etc.) to the tank;
- 7. Add spray surfactant to the tank; and
- 8. Fill the remainder of the spray tank.

Carefully read the labels of other pesticide products for mixing directions and restrictions that may be different.

To determine the compatibility of Parazone 3SL with other products, the following procedure should be followed: Pour the recommended proportions of the products into a suitable container of water, mix thoroughly and allow to stand at least five (5) minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. For further information contact your local ADAMA representative.

**Tank Mixing for Improved Burndown of Difficult Weeds and Residual Weed Control:** Parazone 3SL can be tank-mixed with certain other herbicides in order to obtain greater control of hard to control weeds. Best control is obtained when other photosynthetic inhibitor (PSI) herbicides are added with Parazone 3SL. These herbicides will cause the activity of Parazone 3SL to be slower, thus allowing it more time to distribute throughout the treated leaf. Weed control will be greater than when Parazone 3SL is applied alone.

The following PSI herbicides can be tank-mixed with Parazone 3SL: AAtrex<sup>®</sup> Herbicide or other atrazine-containing products: Bicep Magnum<sup>®</sup> Herbicide; Bicep Lite II Magnum<sup>®</sup> Herbicide; Canopy<sup>®</sup> Herbicide; Lariat<sup>®</sup> Herbicide; Lexone<sup>®</sup> Herbicide; Linex<sup>®</sup> Herbicide; Lorox<sup>®</sup> Herbicide; Lorox<sup>®</sup> Herbicide; MANA Parallel Herbicide; MANA Parallel Plus Herbicide; MANA Parallel PCS Herbicide; Princep<sup>®</sup> Herbicide; Sencor<sup>®</sup> Herbicide or other metribuzin-containing products; and Triangle<sup>™</sup> Herbicide. Be sure to read the respective product label(s) for rates of application, directions for use, limitations, restrictions, and for a list of weeds controlled.

Control of the following difficult to control broadleaf and grassy weeds will be enhanced by the addition of a PSI herbicide with Parazone 3SL: barnyardgrass, broadleaf signalgrass, cheatgrass, cocklebur, fall panicum, giant ragweed, knotweed, kochia, lambsquarters, malva (cheeseweed), marestail, morningglory, Pennsylvania smartweed, perennial weeds (suppression only), prickly lettuce, sedges, tansymustard, velvetleaf and volunteer wheat. For best results, make a second application.

Improved control of perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc. or difficult to control annual broadleaf weeds such as giant ragweed or morningglory will result when Parazone 3SL is tank-mixed with 2,4-D ester (low volatile), 2,4-DB, or Banvel<sup>®</sup> Herbicide. Reduced grass control may result if the amine formulation of 2,4-D is applied as a tank-mix with Parazone 3SL.

38

98

APPLICATION INSTRUCTIONS The following crop tables contain information on use patterns, rates, minimum spray volumes, preharvest intervals, and other restrictions and comments specific to each crop. Read and follow directions carefully.

CROPS	PARAZONE 3SL RATE PER ACRE			REMARKS	
ALFALFA New seedlings (CA only)	0.7-1.3 pts (see below for specific rates for weeds controlled)	During late winter or early spring, make a broadcast application using the specified rate in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Alfalfa foliage present at the time of application will be burned; stands will be reduced and replanting may be necessary.			
	For Control of:			Rate/Acre*	
	For Control of:		For Suppression	For Control	
	Spikeweed		5.4 fl oz	10.7-16.0 fl oz	
	(4 inches tall or less)

#### ALMONDS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS	
ALMONDS	0.8-2.7 pts	Apply the specified rate as a directed spray in a minimum of 10 gallons of spray per acre by ground. Use a shield or wrap the plant when spraying around young trees. Mature woody weeds, perennial weeds, late germinating weeds, and green suckers may need retreatment or spot treatments.	
	Use Restrictions - Almonds		
	Do not graze treated areas.		
	Do not feed cover crops grown in treated areas to livestock.		
	Do not apply when nuts to be harvested are on the ground.		
	Do not allow spray to contact green stems (except suckers) or foliage.		
		han 5 applications per year.	

# ARTICHOKE (GLOBE)

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
ARTICHOKE (GLOBE)	1.7-2.7 pts	Apply the specified rate as a directed spray in a minimum of 20-100 gallons of spray per acre by ground.
	<ul> <li>Use Restrictions – Artichoke (Globe)</li> <li>Do not make more than 3 applications per season.</li> <li>Do not apply at intervals of less than 7 days.</li> <li>Do not apply more than 8 pts/A per growing season.</li> <li>Do not harvest within one day of application.</li> </ul>	

11 738

# ASPARAGUS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
ASPARAGUS	1.7-2.7 pts (preplant or preemergence)	Apply the specified rate as a preplant or preemergence application either broadcast or banded over the row in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Plants that have emerged at the time of application will be killed. Applications must be made before crop emergence.
	1.7-2.7 pts (Preemergence to established plantings at least 2 years old)	Preemergence to established plantings at least 2 years old: Apply the specified rate prior to emergence of crop or after last harvest either broadcast or banded over the row in a minimum of 10 gallons of spray per acre by ground. Plants that have emerged at the time of application will be killed.
	Use Restrictions - Aspar Do not make more th Do not apply within 6	an 3 applications per year for preplant or preemergence application.

#### BEANS, DRY PEAS, DRY

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
BEANS, DRY Sweet lupin White sweet lupin White lupin Grain lupin Adzuki beans	0.8-1.3 pts	Apply the specified rate as a harvest aid in a minimum of 20 gallons of spray per acre by ground or 5 gallons of spray per acre by air when the crop is mature and at least 80% of the pods are yellowing and mostly ripe with no more than 40% (bush type peas or beans) or 30% (vine type peas or beans) of the leaves still green. Add a nonionic spreader at 1 qt per 100 gallon. For vining-type beans or bush-type with lush growth, make a single application at the higher rate. If making a split application, do not make more than 2 applications or exceed a total of 1.3 pts per acre. The split application may improve vine coverage.
Asparagus beans	Use Restrictions – Dry B	eans and Dry Peas
Black beans	<ul> <li>Do not apply when w</li> </ul>	eather conditions favor drift. Adding a drift control agent may reduce spray drift.
Broad beans	Do not make more th	an 2 applications.
Field beans	Do not apply within 7	days of grazing or harvest.

# CACAO

CROPS	PS PARAZONE 3SL REMARKS			
CACAO*	1.3-2.7 pts	Apply as a directed spray in a minimum of 50-200 gallons of spray per acre by ground when the weeds are succulent and growth is from 1"-6". For mature woody weeds, perennial weeds, late germinating weeds, and grasses, retreatment or spot treatments may be needed but do not exceed five applications per year. Protect young plants with a shield to prevent spray from contacting plants as injury may result.		
	Use Restrictions - Caca	o -		
	Do not spray under	windy conditions.		
	<ul> <li>Do not graze treated</li> </ul>	l areas.		
	Do not feed treated cover crops to livestock.			
	Do not apply within '	1 day of harvest.		
	Do not exceed more	than 5 applications per year.		
		red on cacao in California.		

# CASSAVAS, TANIERS, YAMS

CROPS ·	PARAZONE 3SL RATE PER ACRE	REMARKS	
CASSAVAS, TANIERS,		ply as a shielded post directed spray in a minimum of 50 gallons of spray per acre by bund when the weeds are succulent and growth is from 1"-6".	
YAMS	Use Restrictions – Cassavas	s, Taniers, Yams	
	Do not make more than 3	applications per year on cassavas and taniers.	
(Puerto Rico	Do not make more than 2 applications per year on yams.		
only)	Do not allow spray to contact crop or injury may occur.		
	<ul> <li>Do not spray under windy</li> </ul>	conditions.	
	<ul> <li>Do not graze treated area</li> </ul>	IS.	
	<ul> <li>Do not feed treated forage</li> </ul>	e to livestock.	
	Do not apply within 90 da	ys of harvest.	

# CHEMICAL FALLOW

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
CHEMICAL FALLOW		For all chemical fallow applications, apply in a minimum of 5-10 gallons of spray per acre by air or 5-60 gallons of spray per acre by ground. If applying at less than 10 gallons per acre by ground, also follow these additional restrictions:
Product		1. Do not apply with floaters or exceed speed of 10 mph.
Information		2. Apply with flat fan nozzles only at 30-40 psi.
		3. Apply only in a tank mix with atrazine at a minimum of 0.5 lb a.i./acre.
		Use higher spray volumes for better coverage as density of stubble, crop residue, or weeds increase. To control volunteer wheat or downy brome, fall-applied treatments work best with Parazone 3SL. If possible, tank mix with atrazine for maximum burndown and residual control. Apply from immediately after harvest up to emergence of the newly seeded crop as a broadcast or band treatment. Cut wheat as high as possible to avoid cutting weeds too short and allow the weeds to grow at least 2-3" after harvest before applying Parazone 3SL. The addition of dicamba (Banvel <sup>®</sup> ) or 2,4-D ester (low volatile) may aid in the suppression of emerged perennial broadleaf weeds and large annual broadleaf weeds.Refer to 2, 4-D ester (low volatile), Banvel, or residual herbicide label(s) for rates.
		Additionally, when tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.
		For extended weed control during the fallow period, tank mixes with registered residual herbicide combinations other than those listed on this label are permissible.
	· .	Weeds taller than 6" may not be controlled. Weeds and grasses emerging after application will not be controlled. Crop plants emerged at the time of application will be killed.

CHEMICAL	Weeds 1-3": 1.3-1.7 pts	Make a broadcast application in a minimum of 5 gallons of spray per acre by ground or air at
FALLOW	Weeds 3-6": 1.7-2 pts	least 45 days before seeding. For volunteer wheat or downy brome control in the spring, use at least 1.3 pts per acre with a PSI herbicide (see section of the label entitled "Tank Mixing

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS		
CLOVER AND OTHER LEGUMES Including: Bean, velvet Lespedeza Lupin Sainfoin Trefoil Vetch, crown Vetch Vetch, milk	1.3-2.1 pts (On established plantings in Region A <sup>1</sup> ) 0.7-1.3 pts (On established plantings in Region B <sup>2</sup> ) 0.7-1.3 pts (On fall seeded newly established stands less than 1 year old in Region A <sup>1</sup> )	For dormant season application only, Parazone 3SL will desiccate weeds including London rocket, sowthistle, rescue brome, wild oats, chickweed, ryegrass, bluegrass, cheatgrass, dogfennel, tansymustard, henbit, downy brome, and other winter annuals and suppression o perennial weeds. In California, this product may be used for desiccation of weeds including bluegrass, ryegrass, shepherdspurse, chickweed, tansymustard, foxtail, sowthistle and groundsel. In California use high rate if ryegrass, shepherdspurse, sowthistle, or groundsel present. Applications must be made in the late fall or winter months after the last fall cutting but before the first spring cutting. Applications to clover or other legumes that are not dormant or have broken dormancy may result in stand and/or yield reductions. Replanting may be necessary Green clover or other legumes foliage present at the time of application will be burned, discolored and/or temporarily stunted. Total hay yield of first cutting may be reduced in clover or other legumes fields with severe weed infestation. This reduction will usually be

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS	
COTTON (Used alone)	1.7-2.7 pts	Apply preplant or preemergence at the specified rate in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air prior to, during, or after planting but before crop emergence. For fallow bed treatment, beds must be preformed to permit maximum weed and grass emergence before an application of Parazone 3SL. When seeding, a minimum amount of soil disturbance must occur.	
	Use Restrictions - Cott	on (Used Alone)	
-	<ul> <li>Do not make more t</li> </ul>	han 3 applications per year.	
COTTON (Used alone) (California	5.4-10.7 fl oz	Apply specified dosage in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air as a preplant application. This application is used to control volunteer barley in preformed seedbeds.	
only)	Use Restrictions - Cott	on (Used Alone) (California Only)	
-		han 3 applications per year.	
<b>COTTON</b> Goal <sup>®</sup> / Galigan <sup>®</sup> Her- bicide Tank Mix	1.7-2.7 pts	Apply specified dosage in a minimum of 10 gallons of spray per acre by ground or air as a preplant or fallow bed broadcast application. Add Goal or Galigan according to the rate on the product label. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.	
	Use Restrictions - Goa	<sup>©</sup> /Galigan <sup>©</sup> Her-bicide Tank Mix	
`	<ul> <li>Do not make more t</li> </ul>	han 3 applications per year.	
COTTON Other Tank Mixes	1.7-2.7 pts	Apply specified dosage as a preplant or preemergence broadcast spray in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air before, during, or after planting, but before crop emergence. For improved burndown and residual control, Parazone 3SL may be tank mixed with the following herbicides: Cotoran® Herbicide, Meturon® Herbicide, Cotton-Pro® Herbicide, Caparol® Herbicide, diuron herbicides, Harmony® Extra (Preplant Only), MSMA herbicides, Zorial® Herbicide, Dual MAGNUM®, MANA Parallel PCS, MANA Parallel, Prowl®. When tank mixing with Cotoran DF or Meturon DF, follow the mixing instructions on the respective labels and maintain constant agitation. When tank mixing, read and carefully follow all applicable use directions, restrictions, and timitations on the respective label limitations must apply.	
	Use Restrictions – Cotton (Other Tank Mixes)		
	Do not make more than 3 applications per year.		
COTTON Post- emergence Directed Spray (Hooded or Shielded)*	1.2- 2.0 pts	Apply when weeds are actively growing and between 1 - 6" in height. If multiple applications are made, allow 14 days between applications. Use higher rate on dense populations and/or larger or hard to control weeds. Weeds 6" or taller may not be controlled. Avoid contact with crop. Intentional or accidental contact (including drift) of Parazone 3SL with the crop may result in severe damage or loss of the crop. Apply by directing spray between the rows and using hooded or shielded sprayers to prevent contact with crop. Variation in equipment design may affect level of weed control. Keep hoods or shields adjusted to insure adequate contact with weeds while shielding the crop from the herbicide. To minimize drift, do not use nozzles or nozzle configurations or adjuvants which produce fine spray droplets (mist). May be tank mixed with other postemergence directed herbicides When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective label limitations must apply.	
	Use Restrictions - Cotte		
	<ul> <li>Do not make more t * Not for use in Californ</li> </ul>	nan 3 applications per year. ia.	

.

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS		
OTTON larvest aid	See rate below for specific rate based on	Parazone 3SL may be used as a harvest aid in cotton growing areas of the US. Repeat application if necessary, but do not exceed four applications per year or 1.3 pints per acre per		
	geographical region	year. This product may be tank mixed with other cotton harvest aid materials known to be effective by local experience. Unless otherwise instructed in this label, refer to tank mix product label for rates, directions, limitations, and restrictions.		
		Parazone 3SL can also be applied in a tank mix with methyl parathion and/or Karate® or Silencer® insecticides. Nodes above cracked bolls (NACB) timing is for guidance and is not intended to restrict local experience.		
	5.4 fl oz + 1 pt phosphate or 1 gal chlorate (southern cotton)	Use in southern cotton to aid in the defoliation and opening of mature bolls. Tank mix with phosphate and chlorate defoliants. Apply specified dosages by broadcast application when 80% or more of the bolls are open and the remaining bolls to be harvested are mature in a minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air.		
		Use of this tank mix will inhibit the development of immature bolls. Do not apply within 7 days of harvest and grazing.		
	Use Restrictions - Cotto	n (Harvest Aid)		
		ad and carefully follow all applicable use directions, restrictions, and limitations on the bel(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations		
		ock in treated fields or feed treated foliage. I of 1.3 pts/A as a harvest aid.		
		an 4 applications per year.		
	2.1-3.3 fl oz (southern cotton)	Use in southern cotton to aid in the defoliation and opening of mature bolls at specified rate as a broadcast application in 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Parazone 3SL can be mixed with Accelerate® Defoliant, Def® Defoliant, Dropp® Defoliant, Ethephon Plant Growth Regulator, Folex® Defoliant, Harvade <sup>®</sup> Harvest Growth		
		Regulant, Prep® PGR. Apply when 60% or more of the bolls are open and the remaining bolls to be harvested are mature. Development of immature bolls will be inhibited.		
	Use Restrictions – Cotton (Harvest Aid)			
		ad and carefully follow all applicable use directions, restrictions, and limitations on the bel(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations		
		ock in treated fields or feed treated foliage.		
	Do not exceed a tota	of 1.3 pts/A as a harvest aid.		
		an 4 applications per year.		
	0.7-1.3 pts (southern cotton)	Use in southern cotton as a post defoliation treatment to aid in opening of mature bolls and in the desiccation of green weeds. Apply at the specified rate by broadcast application in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air when 75% or more of the bolls are open and the remaining bolls to be harvested are mature.		
	· ·	Development of immature bolls will be inhibited. To avoid leaf sticking, apply Parazone 3SL as a desiccant approximately 3-7 days after defoliation or a conditioning application. If weed infestation is heavy or dense, use the higher rate.		
	Use Restrictions - Cotto			
	respective product la must apply.	ad and carefully follow all applicable use directions, restrictions, and limitations on the bel(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations

# EASTER LILIES

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
EASTER	1.7-2.7 pts	Apply preemergence in a minimum of 10 gallons of spray per acre by ground.
(Field grown)	Use Restrictions – Easter Lilies (Field Grown) <ul> <li>Do not make more than 2 applications per year.</li> </ul>	

(

20 738

# FALLOW LAND

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
FALLOW LAND Prior to planting of any crops	1.0-2.7 pts Use Restrictions – Fall Do not make more	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air for the control of weeds such as bluegrass, chickweed, henbit, downy brome, ryegrass, cheatgrass, dog fennel, tansy mustard, London rocket, sowthistle, rescue brome, wild oats, volunteer cereals and other winter annuals and for suppression of perennial weeds or sedges. Use the higher rate for weeds approaching the maximum size of 6". Fallow land may be between operations such as disking, ripping, plowing, leveling, irrigating or listing for ground preparation purposes. For best results, allow maximum weed emergence prior to application. Adhere to the preharvest intervals and other crop specific restrictions for planted crops elsewhere on this label.

# GRASSES

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
GRASSES	1.3-2.7 pts	Apply specified dosage preplant, at planting, or preemergence in 10 gallons of spray per acre
(For Seed)		by ground. Prepare the seedbeds and allow weeds to germinate. When weeds are at the 3-5
(For Use in		leaf stage, apply Parazone 3SL. Repeat applications as necessary prior to grass emergence,
Seedbed		but do not exceed three applications per year.
Preparation)	Use Restrictions – Gras	ses (For Seed)
	<ul> <li>Do not graze treated</li> </ul>	areas or use the seed or straw from treated areas for animal feed or bedding.
	<ul> <li>Do not make more the</li> </ul>	nan 3 applications per year.
GRASSES	1.0-1.5 pts	Apply specified dosage by ground in a minimum of 10 gallons of spray per acre and by air in
(Kentucky		a minimum of 5 gallons of spray per acre. For use on Kentucky bluegrass seed production
Bluegrass		fields in Minnesota as a post harvest application to facilitate burning. Add a nonionic
grown for		surfactant at a rate of 1 pint per 100 gals. (75% or greater surface active ingredient) or 2 pints
seed only)		per 100 gallons (50-74% surface active ingredient). Make application 1-4 weeks after harvest
• •		and wait 3-7 days before burning fields.
(Minnesota	Use Restrictions – Grasses (Kentucky Bluegrass Grown For Seed Only)	
only)		nan 2 applications per season.
	Do not apply this pro	duct through any type of irrigation system.
		hay from treated fields prior to burning.

# GUAR

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
GUAR	1.3 pts	Apply specified dosage for preharvest desiccation in a minimum of 10 gallons of spray per acre by ground after the pods are fully mature.
	<ul> <li>Use Restrictions – Guar</li> <li>Do not graze treated areas or use the treated forage for animal feed.</li> <li>Do not make more than 3 applications per year.</li> </ul>	
	Do not apply within	4 days of harvest or grazing.

#### GUAVA

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS	
GUAVA	2.5 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. Retreatment and/or spot spraying may be necessary for mature woody weeds, late-germinating weeds and grasses, and perennials.	
	Use Restrictions – Guava		
	Do not make more than 4 applications per year.		
	Do not allow spray to contact green stems, fruit, or foliage.		
	Do not graze treater		
*	Do not feed cover c	rops grown in treated areas to livestock.	

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
HOPS (ID, OR, & WA only)	1.3 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. For suckering and stripping, spray only the basal 2 ft. of the vines. Repeat as necessary, but do not exceed three applications per year. Experience with varieties other than Cascade, Yakima Cluster, and Bullion is limited. If using Parazone 3SL on varieties other than these, test on a small number of vines of each variety to determine sensitivity to injury and do not use on unlisted varieties if unacceptable crop injury occurs. For chemical pruning to burn back existing vines and obtain even emergence of subsequent vines, spray when vines are less than 3 ft. tall. Unacceptable injury may occur when applications are made to vines less than 6 ft. tall.
•	Use Restrictions - Hops	
		4 days of harvest or grazing.
	<ul> <li>Do not apply more the</li> </ul>	nan 3 times per year.
. ,	Do not allow spray to	o contact green stems, foliage, flowers, or cones as injury may result.
	Do not allow animals	to graze in treated hopyards, but hop vine refuse and silage may be fed to livestock.

# LENTILS

1105

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
(Not for use in California)	0.8-1.3 pts	Apply specified dosage as a harvest aid in a minimum of 20 gallons of spray per acre by ground and 7 gallons of spray per acre by air plus a nonionic surfactant at 0.25% v/v (2 pts per 100 gallons) of the finished spray volume. Apply when the crop is mature and at least 80% of the pods are yellowing and mostly ripe. No more than 30% of the leaves should still be green in color. To improve coverage, a split application may be made.
•	<ul> <li>Not registered for us</li> </ul>	veather conditions favor spray drift. A drift control agent may be included to reduce spray drift. e on lentils in California. nan 2 applications per year nor exceed a total of 1.3 pts per acre.

#### MINT

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
MINT (Peppermint Spearmint)	1.3-2.0 pts	Apply during the dormant season before spring growth when weeds are less than 6" tall using the specified dosage in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Use for the suppression of weeds such as Italian ryegrass, prickly lettuce, groundsel, chickweed, downy brome and bluegrass. This product may be tank mixed with Sinbar® Herbicide (terbacil) weed killer for improved contact activity and residual control of Italian ryegrass, prickly lettuce, and groundsel. Apply this tank mixture no more than once per season. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.
	<ul> <li>Use Restrictions - Mint</li> <li>Do not apply more than 2 pts per acre per dormant season.</li> </ul>	
		han 2 applications per year.

# ONIONS, GARLIC

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
ONIONS (seeded), GARLIC	1.7-2.7 pts	Apply specified dosage preplant or preemergence in a minimum of 10 gallons of spray per acre by ground. The higher rate must be used for heavy infestations or for wild oat control. Allow maximum weed and grass emergence prior to treatment but apply prior to crop emergence.
	<ul> <li>Use Restrictions – Onions (Seeded), Garlic</li> <li>Do not apply within 60 days of harvest in all states except California. In California, do not apply within 200 days of harvest.</li> <li>Do not apply more than 2.7 pts per acre per year nor apply more than once per year.</li> </ul>	

# PASSION FRUIT

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
PASSION FRUIT	2.5 pts	Make a directed spray at the specified rate in a minimum of 10 gallons of spray per acre by ground. If bark is still green at the time of application, use a shield or wrap the vine. If making applications close to or during harvest, pick all fruit off the ground prior to application. Retreat as necessary, up to five times per year.
	Use Restrictions – Pass	ion Friut
	<ul> <li>Do not make more the</li> </ul>	nan 5 applications per year.
	<ul> <li>Do not allow animals</li> </ul>	s to graze in treated areas.

97 338

# PEANUTS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS	
PEANUTS	5.4-10.8 fl oz	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre at ground cracking. A second application may be made up to 28 days after ground crack. This application will control or suppress small (1-6") emerged annual grass and broadleaf weeds.	
		For at ground crack use, Parazone 3SL can be tank mixed with Pursuit <sup>®</sup> Herbicide, MANA Parallel <sup>®</sup> PCS, or Dual MAGNUM <sup>®</sup> for residual weed control. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply. Crop foliage sprayed will be injured in the form of bronzing and	
		crinkling but the crop will recover and develop normally.	
	Use Restrictions – Pean	uts	
	<ul> <li>Do not apply by air.</li> <li>Do not make more th</li> </ul>	an 2 applications per season nor apply a total of more than 10.8 fl oz of product per acre per	
	Do not make more th     season.		
PEANUTS Basagran® Herbicide	5.4-10.8 fl oz + 1 pt Basagran	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre at ground crack stage of peanuts. A second application may be made up to 28 days after ground crack.	
Tank Mix		A tank mix application of Parazone 3SL with Basagran will improve control of cocklebur, bristly starbur, smartweed, and prickly sida. When tank mixing, read and carefully follow all	
		applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply. Crop foliage sprayed will be injured in the form of bronzing and crinkling but the crop will recover and develop normally.	
	Use Restrictions - Pean	Its Basagran Herbicide Tank Mix	
	Do not apply by air.		
	<ul> <li>Do not make more the season.</li> </ul>	an 2 applications per season nor apply a total of more than 10.8 fl oz of product per acre per	
	<ul> <li>Do not apply this tank mix if peanuts show injury (leaf phytotoxicity and/or plant stunting) produced by any other herbicide treatment as injury may be enhanced and/or prolonged.</li> </ul>		
	weed control may res	mix during prolonged periods of drought or unseasonably cold weather as unsatisfactory ult.	
PEANUTS	5.4-10.8 fl oz +	Apply as a broadcast postemergence application at the specified dosage in a minimum of 10	
Butyrac® Herbicide or	8-16 oz (0.125-0.25 lbs.) Butyrac or Butoxone 200	gallons of spray per acre by ground. A tank mix application of Parazone 3SL with Butyrac or Butoxone 200 will improve control of weeds such as cocklebur, sicklepod, and morningglory.	
Butoxone®		When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed	
200 Herbicide Tank Mix		products, the most restrictive label limitations must apply. Crop foliage sprayed will be injured in the form of bronzing and crinkling but the crop will recover and develop normally.	
I drik IvitA	Use Restrictions - Peanu	Its Butyrac Herbicide or Butoxone 200 Herbicide Tank Mix	
	<ul> <li>Do not apply by air.</li> </ul>		
-	Do not make more the	an 2 applications per season nor apply a total of more than 10.8 fl oz of product per acre per	
PEANUTS	season. Mix 1 part Parazone with	Apply through a recirculating rope wick or carpet roller equipment for suppression or control	
Suppression	2 parts water to prepare	of glyphosate-resistant Palmer Amaranth, or to prevent seed production. In order to prevent	
of	a 33% solution. Add	seed production, an application must be made prior to formation of viable seed.	
glyphosate- resistant	non-ionic surfactant at 0.25% v/v (2 pints/100	Make application at least 6 inches above the peanut canopy. Set application equipment to avoid dripping. Low ground speed enhances coverage which leads to improved weed control	
Palmer	gal) of finished volume.	Use ground speeds of 5 mph or less. Delaying application to late afternoon or early evening	
Amaranth (Not for use	Apply up to 2 pints/acre of the herbicide-water	will enhance control of large weeds. Follow application equipment manufacturer's directions.	
in CA)	mixture.		

Use Restrictions – Peanuts (Suppression of Glyphosate-resistant Palmer Amaranth)
<ul> <li>Do not apply more than 0.67 pints/acre (0.25 lbs ai/acre) of Parazone using the recirculating wick or carpet roller application method.</li> </ul>
Do not exceed 0.5 lb ai/acre total for all Parazone applications to peanut.
Do not allow livestock to graze in treated areas.
Do not feed hay or threshings from treated fields to livestock.

23 8.38

#### PERSIMMON

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
PERSIM- MON (Not for use in CA)	2.5 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. Mature woody weeds, late-germinating weeds and grasses, and perennials may need spot spraying or retreatment, but do not exceed five applications per year.
	Use Restrictions - Persimmon         Do not allow spray to contact green stems, fruit, or foliage.         Do not graze treated areas.         Do not feed cover crops grown in treated areas to livestock.         Do not make more than 5 applications per year.	

# PIGEON PEAS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
PIGEON PEAS	1.3 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. Avoid contact with crop foliage.
(Puerto Rico only)	<ul> <li>Use Restrictions - Pigeon Peas</li> <li>Do not make more than 1 application per season or per year.</li> <li>Do not graze treated areas or feed treated forage to livestock. Cannery waste can be fed to livestock.</li> <li>Do not apply within 60 days of harvest.</li> </ul>	

# PINEAPPLE

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
PINEAPPLE	1.3-2.7 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. On mature or hard to control weeds, retreatment may be necessary, but do not exceed three applications per year.
	Use Restrictions – Pineapple	
	Do not make more than 3 applications per season.	
	<ul> <li>Do not apply within 2</li> </ul>	20 days of harvest.

# ΡΟΤΑΤΟ

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
ΡΟΤΑΤΟ	0.7-1.3 pts	Apply specified dosage as a preplant or preemergence broadcast spray in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Applications may be made up to ground cracking but before potatoes have emerged.
	Use Restrictions - Potat	
	Do not make more the	an 3 applications per year.
POTATO (Used alone) (CA, WA, ID,	0.4-0.7 pt	Apply specified dosage as a preplant broadcast spray in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. This application is used for volunteer barley control in preformed seedbeds.
OR only)	Use Restrictions – Potato (Used Alone)	
0. ( 0	Do not make more than 3 applications per year.	
POTATO (Fresh market potatoes only) <sup>1</sup> (see "Remarks" section for list of states)	0.7-1.3 pts	Apply specified dosage for preharvest vine killing and weed desiccation as a broadcast spray in a minimum of 20 gallons of spray per acre by ground. When quick vine kill is desired, use 1.3 pts per acre. When vine growth is dense, use two applications at 0.6 pt per acre. Allow a minimum of five days between split applications. Fresh Market Potatoes include potatoes that are sent directly from the field to a consumer, grocery store, or processor for use. Potatoes must be harvested promptly after desiccation and consumed or processed immediately. Begin application when leaves begin to turn yellow. Immature potato foliage is tolerant to Parazone 3SL; however, desiccation will not be complete under this condition. <sup>1</sup> For Use Only in the states of: CO, DE, ID, IL, IN, KS, ME, MD, MA, MI, MN, NE, NV, NJ, NY, ND, OH, OR, PA, SD, UT, WA, WI, WY

Use Restrictions – Potato (Fresh Market Potatoes Only)
<ul> <li>Do not use on potatoes that will be stored as tuber decomposition may result.</li> </ul>
Do not apply to drought stressed potato vines.
Do not use to desiccate the vines of seed potatoes as seed pieces may fail to germinate and grow normally.
Do not pasture livestock in treated potato fields.
Do not exceed 2.6 pts/A per season.
Do not make more than 2 applications per year.
Do not apply within 3 days of harvest.

24 338

RICE

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
RICE	Weeds 1-3":1.3-1.7 pts Weeds 3-6": 1.7-2.0 pts Weeds 6": 2.0-2.7 pts	Apply as a broadcast spray before, during, or after planting but before crop emergence in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Use higher specified rates and spray volumes when vegetation is dense. Seeding must be done with a minimum amount of soil disturbance. Weeds and grasses emerging after application will not be controlled, but crop plants exposed to application will be killed. For improved or extended weed control, Parazone 3SL may be tank mixed with other herbicides registered for this use. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.
	<ul> <li>Use Restrictions – Rice</li> <li>Do not flood/flush within 48 hours of application in order to ensure complete kill of vegetation. If cool, cloudy, and/or wet weather delays speed of kill, do not flood/flush until complete kill is evident.</li> <li>Do not make more than 3 applications per year.</li> </ul>	

# SAFFLOWER

0/11 201121		
CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SAFFLOWER	1.7-2.7 pts	Apply broadcast or banded over row before, during, or after planting but before crop emergence in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air.
	Use Restrictions – Safflower	
	Do not make more than 3 applications per year.	
SAFFLOWER (CA only)	0.7 pt	Apply as a preplant broadcast spray in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. This application is effective for control of volunteer barley in preformed seedbeds.
	Use Restrictions – Safflower	
	Do not make more than 3 applications per year.	

#### SMALL GRAINS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SMALL	Weeds 1-3": 1.3-1.7 pts	Apply specified dosage preplant or preemergence in a minimum of 5 gallons of spray per
GRAINS	Weeds 3-6": 1.7-2 pts	acre by ground or air.
(Barley,	Weeds 6": 2-2.7 pts	
Wheat)	Use Restrictions – Small	I Grains (Barley, Wheat)
	<ul> <li>Do not make more th</li> </ul>	an 3 applications per year.

GRAINS	Weeds 3-6": 1.7-2 pts	acre by ground and 5 gallons of spray per acre by air. A tank mix with Hoelon 3EC applied
(Wheat Only)	Weeds 6": 2-2.7 pts	when weeds are 1-6" in height and are actively growing will improve grass control. Weeds 6
Hoelon®		inches or taller may not be controlled. When tank mixing, read and carefully follow all
3EC Tank		applicable use directions, restrictions, and limitations on the respective product label(s). In
Mix		interpreting the label(s) of tank mixed products, the most restrictive label limitations must
		apply.
	Use Restrictions – Small Grains (Wheat Only)	
	Do not make more than 3 applications per year.	
	Do not apply this tank mix on barley as crop injury may result.	

# SORGHUM

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SORGHUM (Grain)	Weeds 1-3": 1.3-1.7 pts Weeds 3-6": 1.7-2 pts Weeds 6": 2-2.7 pts	Apply specified dosage preplant or preemergence in a minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air as a broadcast or banded application. Seedbeds must be formed as far ahead of planting as possible to allow maximum weed and grass emergence. Seeding must be done with a minimum of soil disturbance.
		<b>hum (Grain)</b> nan 3 applications per year. 18 days of harvest for grain and 20 days of harvest for forage.

SORGHUM	Weeds 1-3": 1.3-1.7 pts	For preplant or preemergence application, Parazone 3SL may be tank mixed with atrazine for	
(Grain)	Weeds 3-6": 1.7-2 pts	improved preemergence or residual weed control. The addition of 2,4-D ester (low volatile)	
Atrazine &	Weeds 6": 2-2.7 pts	may aid in the suppression of perennial and annual broadleaf weeds emerged at the time of	
2.4-D ester	···· · · · · · · · · · · · · · · · ·	application. When tank mixing, read and carefully follow all applicable use directions,	
[low volatile]		restrictions, and limitations on the respective product label(s). In interpreting the label(s) of	
Tank Mix		tank mixed products, the most restrictive label limitations must apply.	
	Use Restrictions - Sora	hum (Grain) (Atrazine & 2,4-D ester [low volatile] Tank Mix)	
	Ĵ	an 3 applications per year.	
		8 days of harvest for grain and 20 days of harvest for forage.	
SORGHUM	1.3-2.5 pts	Make a preplant application at the specified dosage in a minimum of 10 gallons of spray per	
(Grain)	]	acre by ground. Parazone 3SL may be tank mixed with Harmony Extra for improved weed	
Harmony®		control. When tank mixing, read and carefully follow all applicable use directions, restrictions.	
Extra		and limitations on the respective product label(s). In interpreting the label(s) of tank mixed	
Herbicide		products, the most restrictive label limitations must apply.	
Tank Mix	Use Restrictions – Sorghum (Grain) (Harmony Extra Herbicide Tank Mix)		
	Do not make more than 3 applications per year.		
	<ul> <li>Do not apply within 48 days of harvest for grain and 20 days of harvest for forage.</li> </ul>		
SORGHUM	0.7-1.3 pts	Apply specified dosage as a postemergence directed spray (including hooded or shielded) in	
(Grain)		10 gallons of spray per acre by ground when weeds are actively growing. Use higher	
. ,		specified rate on larger or hard to control weeds. Weeds 6" or taller may not be controlled.	
		Because spray can severely damage and/or kill sorghum plants, applications must be made	
		with either hooded or shielded sprayers or as a directed spray as outlined below. To avoid	
		excessive crop phytotoxicity, use a hooded or shielded sprayer with skids or wheels on the	
		spray boom to maintain spray height. Apply by directing spray between the rows and using	
		hooded or shielded sprayers to prevent spray contact with crop plants. If applying without a	
		hooded or shielded sprayer, apply when sorghum is at least 12" tall when naturally standing.	
		Do not exceed 30 psi nozzle pressure or spray under conditions which may cause excessive	
		drift. Use precision directed spray application equipment adjusted so that no more than the	
•		lower 3" of the sorghum stalk is contacted by the application spray. Some crop injury will	
		occur. The degree of injury is related to the precision of application and spraying conditions.	
	Use Restrictions – Sorghum (Grain)		
	Do not exceed 2 post	temergence-directed applications or exceed a total of 5.3 pts Parazone 3SL per season or per	
	year.	· · ·	
	Do not apply within 4	8 days of harvest for grain and 20 days of harvest for forage.	

25 3 38

#### SOYBEANS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS	
SOYBEANS	Weeds 1-3": 1.3-1.7 pts Weeds 3-6": 1.7-2 pts Weeds 6": 2-2.7 pts	Apply specified dosage as a broadcast spray before, during, or after planting but before crop emergence in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Parazone 3SL may be tank mixed with the following herbicides for improved burndown or residual control: 2.4-DB, Canopy, Dual MAGNUM, Goal or Galigan, Harmony Extra (Preplant Only), Lasso, Lexone, Linex; Lorox, Lorox Plus, Prowl, Pursuit Herbicide, Scepter Herbicide, Sencor, Surflan® Herbicide, Turbo® Herbicide. The rate of Parazone 3SL to be used in these tank mixtures is dependent on weed height and growing conditions. Use the highest specified rate of Parazone 3SL under dry conditions or where the weed canopy is dense. The lower rate may be used when weeds are less than 4" tall and a selective postemergence spray or cultivation will be made within 3 weeks after planting. Seeding must be done with a minimum amount of soil disturbance. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product tabel(s). In interpreting the tabel(s) of tank mixed products, the most restrictive tabel limitations must apply.	
	Use Restrictions – Soybeans		
	Do not exceed a total of 4.0 pts of Parazone 3SL per season.		
	Do not make more than 3 applications per year.		
	Do not graze or harvest for forage or hay before the R3 stage of soybean development (early pod).		
SOYBEANS 2,4-D ester (low volatile) Tank Mix	Weeds 1-3": 1.3-1.7 pts Weeds 3-6": 1.7-2 pts Weeds 6": 2-2.7 pts + 0.35-0.475 lb a.i. 2,4- D ester (low volatile) at least 7 days prior to planting or + 0.475-0.95 lb a.i. 2,4-D ester (low volatile) at least 30 days prior to planting	Apply preplant or preemergence at the specified dosage in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.	
	Use Restrictions - Soybeans (2,4-D Ester [Low Volatile] Tank Mix)		
	Do not make more than 3 applications per year.		
		formulation of 2,4-D as the activity of Parazone 3SL may be reduced.	
	Do not apply 2,4-D es and yield, are not acc	ster (low volatile) prior to planting soybeans if soybean injury, including possible loss of stand eptable.	

OVERANE	3.0-5.3 fl oz	Apply specified dosage as a postemergence directed spray (includes hooded or shielded) in	
SOYBEANS	(post emergence	a minimum of 10 gallons of spray per acre by ground when weeds are actively growing. Use	
	directed spray: includes	the lower rate to control seedling Johnsongrass, crabgrass, goosegrass, brachiaria, Texas	
	hooded or shielded)	millet, and pigweed less than 2" tall. Use the highest rate for control of 2-4" red rice.	
		Brachiaria, barnyard grass, crabgrass, goosegrass, seedling Johnsongrass, giant foxtail, fall	
		panicum, 2-3" sicklepod, purslane, pigweed, cutleaf ground cherry, and common ragweed.	
	f.	Add 2,4-D at rates specified on the label of the product you are using for control of 2-4 inch	
		grasses in mixture with common cocklebur, morningglory, and red rice. If necessary, a	
		second application may be made 7-14 days later. Hooded or shielded sprayers must be used	
		by directing spray between the rows to prevent spray contact with crop plants. Use higher	
		rate on larger (<6") or hard to control weeds. Weeds 6" or taller may not be controlled.	
		Severe damage and/or complete kill can occur if spray intentionally or accidentally (including	
		drift of fine droplets) contacts the plants. If making applications without hooded or shielded sprayers, use precision directed spray application equipment adjusted so that no more than	
	1	the lower 3" of the soybean plant is contacted by the application spray. Do not exceed 30 psi	
		nozzle pressure or spray under conditions which may cause excessive drift. Do not treat if	
		soybeans are less than 8" tall. Some crop injury will occur. The degree of injury is related to	
		the precision of application and spraying conditions. When tank mixing with 2,4-D, read and	
		carefully follow all applicable use directions, restrictions, and limitations on the respective	
		product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label	
		limitations must apply.	
	Use Restrictions – Soybeans		
	Do not make more than 3 applications per year.		
•	Do not graze or harvest for forage of hay.		
	5.4-10.7 fl oz	Harvest Aid: Apply specified rate in a minimum of 20 gallons of spray per acre by ground or	
		5 gallons of spray per acre by air. On indeterminate varieties, apply when at least 65% of the seed pods have reached a mature brown color or when seed moisture is 30% or less. On	
		determinant varieties, apply when plants are mature, i.e., beans are fully developed, ½ of	
		leaves have dropped, and remaining leaves are yellowing. Immature soybeans will be	
		injured.	
		Use the higher rate for cocklebur control. Mature cocklebur, especially drought-stressed	
		plants, are tolerant to Parazone 3SL and desiccation will not be complete.	
	Use Restrictions – Soybeans		
	Do not apply within 1		
		an 3 applications per year.	
	<ul> <li>Do not graze or harve</li> </ul>	est for forage or nay.	

26 738

# STRAWBERRIES

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
STRAW- BERRIES	1.3 pts	Apply as a postemergence directed spray in a minimum of 20 gallons of spray per acre by ground directing the spray between the rows and using shields to prevent contact with the crop.
	Use Restrictions – Strawberries	
	Do not allow spray to contact strawberry plants as injury or excessive residues may result.	
<ul> <li>Do not apply more than 3 times per season or per year.</li> </ul>		han 3 times per season or per year.
ſ	Do not graze livestock in treated areas.	
	Do not apply within :	21 days of harvest.

# SUGAR BEETS

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SUGAR BEETS	1.3-2.7 pts	Apply specified dosage preplant or preemergence in a minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air. Use the higher rate for heavier weed infestations. Seedbeds or plantbeds must be formed as far ahead of treatment as possible to permit maximum weed emergence with a minimum amount of soil disturbance when seeding or transplanting occurs. Crop plants emerged at time of application will be killed. This application may be used in fallow bed/stale seedbed for weed control.
	Use Restrictions – Sugar Beets	
	Do not make more than 3 applications per year.	

#### SUGARCANE

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SUGAR- CANE	See rate below based on geographical area to be treated	For all sugarcane growing areas, the following comments are applicable. Apply as a hooded, shielded, or directed post emergence spray to avoid contact with cane foliage to prevent leaf burn and yield reduction. Make a second and final application, if necessary, when new weed growth is 2-6" high.
	. 1.3 pts (FL only)	In Florida, apply specified rate in a minimum of 50 gallons of spray per acre by ground in early spring (March-April) when weeds are small. Do not apply after June 1 as cane growth may be stunted and yields reduced.

Use Restrictions – S	ugarcane (FL Only)
<ul> <li>Do not graze trea</li> </ul>	ated areas or feed treated forage to livestock.
<ul> <li>Do not make more</li> </ul>	e than 2 applications per year.
1.3 pts (Hi only)	In Hawaii, apply specified rate in a minimum of 20 gallons of spray per acre by ground but d not apply after the cane rows have closed in.
Use Restrictions – S	ugarcane (HI Only)
Do not graze trea	ated areas or feed treated forage to livestock.
Do not make mo	re than 2 applications per year
0.7-2.0 pts	In Louisiana, apply specified rate in a minimum of 20 gallons of spray per acre by ground.
(LA only)	Apply when tillers are less than 18" high for tiller control. Use the higher rate for tiller control
	and when heavier weed infestations are present.
Use Restrictions - S	ugarcane (LA Only)
<ul> <li>Do not graze trea</li> </ul>	ated areas or feed treated forage to livestock.
<ul> <li>Do not harvest w</li> </ul>	ithin 30 days of application.
<ul> <li>Do not make more</li> </ul>	e than 2 applications per year.
0.4-0.7 pt	In Florida and Texas, apply the specified rate in 5 gallons of spray per acre by air. Use the
(FL and TX only)	higher rate when cool cloudy weather exists. Apply 3-14 days before burning and harvest.
Use Restrictions - S	ugarcane (FL and TX Only)
	ated areas or feed treated forage to livestock.
Do not make more than one application per year.	

. ·

# SUNFLOWER

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
SUN-	1.7-2.7 pts	Apply specified dosage before, during, or after planting but before crop emergence in a
FLOWER	(preplant or	minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air
	preemergence)	either broadcast or banded over the row.
	Use Restrictions – Sunfl	ower
	Do not make more than 3 applications per year.	
	0.8-1.3 pts	Preharvest desiccation: Apply specified dosage as a broadcast spray for preharvest
	(preharvest desiccation)	desiccation in a minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air. Apply when sunflower seeds reach physiological maturity (when seed moisture is 35% or lower). For many varieties, this is the same time when the back of the heads are yellow and the bracts are turning brown. Use the higher rate when crop stands or weed infestations are heavy.
	Use Restrictions – Sunflower	
	Do not make more than 2 applications per year.	
	Do not apply within 7 days of harvest.	
	<ul> <li>Do not graze treated</li> </ul>	areas or feed treated forage to livestock.

# TARO, DRYLAND

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
TARO, DRYLAND (HI Only)	1.3-2.1 pts	Apply specified dosage as a postemergence directed spray in a minimum of 10 gallons of spray per acre by ground. Make the first application when weed growth is 1"-4" high. If weeds emerge after application, they will not be controlled. A single retreatment may be made; however, do not harvest dryland taro within 6 months of last application
	Use Restrictions – Taro, Dryland	
	Do not make more th	an 2 applications per year.
	Do not allow spray to	contact taro plants as injury may result.
	Do not harvest within	6 months (180 days) of last application.

# TREE PLANTATION ESTABLISHMENT

ÇROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
TREE PLANTA- TION ESTABLISH- MENT Deciduous and Conifers	1.3-2.7 pts	Apply specified dosage prior to planting as a broadcast application in 20 gallons of spray per acre by ground equipment. Be careful to minimize soil disturbance when planting. Use the higher rate for heavier weed infestations. For improved burndown or residual control, tank mix Parazone 3SL with other herbicides labeled for this use. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply. Do not apply in less than 20 gallons per acre, as weed control will be reduced. Prepare ground early to allow maximum emergence of weeds.
	<ul> <li>Use Restrictions – Tree Plantation Establishment</li> <li>Do not make more than 3 applications per year.</li> </ul>	

# TREES AND VINES

(

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
TREES AND VINES Orchards, Vineyards, Windbreaks, Shade & Ornamental Trees Acerola Apples	1.7-2.7 pts	Apply specified dosage as a directed spray in a minimum of 10 gallons of spray per acre by ground. Treat when sucker growth is no longer than 8" on grapes. Late season applications to weeds must be made to prevent contact with desirable grape foliage. Spot treatments or retreatment may be needed for perennial weeds, mature woody weeds, late germinating weeds, and green suckers. Use a shield or wrap plant when spraying around young trees or vines. Parazone 3SL may be used as a directed spray in tank mix combination with the following herbicides: Devrinol®, Goal® or Galigan® Herbicide, Karmex® or Diuron herbicides, Krovar®, Princep®, Sinbar® or Metribuzin 75DF, Solicam® or Oryzalin 4 A.S When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on
Apricots Avocados Bananas		the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply.
Beechnut Brazil Nut Butternut Calamondin Cashew Cherries Chestnut Chinquapin Citrus Citron Coffee	<ul> <li>Do not apply more th directed applications per year), nectarines applications per year year total but only 2 a</li> <li>Do not apply within 2 days of harvest for ki peaches, 7 days of harvest for ki</li> </ul>	and Vines (Orchards, Vineyards, Windbreaks, Shade & Ornamental Trees) an 5 post emergence directed applications per year except for apricots (3 post emergence per year), cherries (3 post emergence directed applications per year), kiwi fruit (3 applications (3 post emergence directed applications per year), olives (4 post emergence directed ), peaches (3 post emergence directed applications per year), pistachios (5 applications per after shells split), plums (3 post emergence directed applications per year). 8 days of harvest for apricots, 28 days of harvest for cherries, 13 days of harvest for figs, 14 wi fruit, 28 days of harvest for nectarines, 13 days of harvest for olives, 14 days of harvest for arvest for pistachios, 28 days of harvest for plums.

#### TYFON

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
TYFON (NH only)	1.7-2.7 pts	Apply specified dosage preplant or preemergence in a minimum of 10 gallons of spray per acre by ground. Crop plants that have emerged at the time of application will be injured. Weeds and grasses emerging after treatment may not be controlled. Seeding must be done with a minimal amount of disturbance to the soil.
	Use Restrictions – Tyfon	
	<ul> <li>Do not make more the</li> </ul>	an 3 applications per year.

# VEGETABLES

CROPS	PARAZONE 3SL RATE PER ACRE	REMARKS
VEGETABLES: Seeded or Trans- planted Beans(Lima, Snap) Broccoli Cabbage Cantaloupe Carrots Cauliflower Chayote Fruit Chinese Cabbage Chinese Waxgourd Citron Melon Collards Cucumber Eggplant Endive (Escarole) Gherkin Edible Gourd Groundcherry Lettuce Momordica spp. Musk Melons Peas Pepino Peppers Pumpkin Squash Sweet Corn Tomatillo Turnips Tomatoes Watermelons	<ul> <li>Do not harves</li> </ul>	Apply specified dosage preplant or preemergence in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Applications can be made as a banded or broadcast treatment before, during, or after planting but prior to the crop emergence. Seedbeds or plantbeds must be formed as far ahead of treatment as possible to permit maximum weed emergence. Use the higher rate for heavier weed infestations. Seeding or transplanting must be done with a minimal amount of soil disturbance. Crop plants emerged at time of application will be killed. Parazone 3SL may be used in fallow bed/stale seedbed for weed control alone or tank mixed with Goal/Galigan. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply. - Vegetables (Seeded or Transplanted) st tomatoes within 30 days after application. more than 3 applications per season.

VEGETABLES:	1.3 pts	Apply specified dosage as a directed spray between the row after crop establishment in a	
Eggplant		minimum of 10 gallons of spray per acre by ground to control or suppress emerged weeds.	
Tomatoes		Use precision directed spray equipment (not exceeding 30 psi nozzle pressure) adjusted to	
Peppers		prevent spray contact with crop. Do not spray under conditions which may cause excessive	
•		drift. Apply when weeds are succulent and when weed growth is less than 6".	
	Use Restrictions	-	
		more than 3 applications per season.	
		animals to graze in treated areas.	
	Do not harvest within 30 days of application on tomatoes.		
VEGETABLE: Tomatoes	1.6-2.5 pts	After Final Harvest: Apply specified dosage after final harvest in 40-120 gallons of spray per acre (0.62-0.93 lb a.i./A) by ground. Add NIS containing 75% or more surface active agent at 0.125% v/v (1 pt/100 gals. spray solution). Thorough coverage of the tomato vines is required to ensure maximum herbicide burndown. Use of dirty or muddy water may deactivate Parazone 3SL. Burn tomato vines with propane burners as soon as possible after the vines have dried down sufficiently to help with the removal of Sweet Potato Whitefly.	
	Use Restrictions – Vegetable		
	Do not apply	more than a total of 3 lbs. active ingredient (paraquat) per acre per season.	
	Do not apply	more than 2 applications per season.	
	<ul> <li>To minimize</li> </ul>	drift, do not use nozzles or nozzle configurations which produce fine spray droplets (mist).	
VEGETABLES: Lettuce Melon	0.4-0.7 pt	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air. Used for control of volunteer barley in preformed seedbeds.	
Sugar Beets	Use Restrictions - Vegetables		
Tomatoes	<ul> <li>Do not harvest tomatoes within 30 days after application.</li> </ul>		
(CA, WA, OR, ID only)	Do not apply more than 2 applications per season.		
VEGETABLE: Rhubarb	1.7-2.7 pts	Apply specified dosage as a dormant application in a minimum of 10 gallons of spray per acre by ground. Apply before buds in the crown begin to grow.	
	Use Restrictions	- Vegetable	
		more than 2 applications per season.

# CONSERVATION RESERVE

CROP	PARAZONE 3SL RATE PER ACRE	REMARKS
CONSERVA-TION RESERVE, FEDERAL SET- ASIDE, CONSER- VATION COM- PLIANCE PRO- GRAMS <sup>1</sup> (See footnote in	1.7-2.7 pts	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre by ground and 5 gallons of spray per acre by air. Parazone 3SL may be tank mixed with other registered herbicides to improve weed control. When tank mixing, read and carefully follow all applicable use directions, restrictions, and limitations on the respective product label(s). In interpreting the label(s) of tank mixed products, the most restrictive label limitations must apply. <sup>1</sup> For use in compliance with the Federal Conservation Reserve Program or Federal set-aside programs.
"Remarks" section	Use Restrictions – Conservation Reserve	
for notation)	Do not apply more than 3 applications per season.	

31 738

# NONCROP USES

CROP	PARAZONE 3SL RATE PER ACRE	REMARKS
NONCROP USES <sup>1</sup> (See footnote in "Remarks" section for notation)	1.7-2.7 pts	Apply specified dosage as a broadcast application or spot treatment in a minimum of 10 gallons of spray per acre by ground. Repeat applications as necessary being careful to avoid contact with foliage of ornamentals or desirable plants. <sup>1</sup> Including but not limited to public airports, electric transformer stations, pipeline pumping stations, around commercial buildings, storage yards and other installations, and fencelines.
	Use Restrictions – Noncrop Uses     Do not apply more than 10 applications per year.	

# PASTURE RESEEDING

CROP	PARAZONE 3SL RATE PER ACRE	REMARKS	
PASTURE RESEEDING For suppression of existing sod and undesirable emerged broadleaf weeds and grasses prior to or at time of planting grasses or forage legumes	0.7-1.3 pts	<ul> <li>Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre by ground or 5 gallons of spray per acre by air.</li> <li>West of Cascade and Sierra Nevada Mountains <ul> <li>Apply in October through December after first fall rains and after weeds have emerged and sod has started new growth.</li> <li>For best seeding results, apply on moderately to heavily grazed areas.</li> <li>Do not use in areas with heavy sod and weed growth.</li> </ul> </li> <li>East of Rocky Mountains <ul> <li>Use the 1.3 pt rate on vigorous or coarse sod species such as bromegrass.</li> <li>Apply prior to or at time of seeding grasses or forage legumes.</li> <li>Apply only to grazed or mowed pastures not more than 3" in height at time of treatment.</li> </ul> </li> <li>Bermudagrass or Bahiagrass Sods <ul> <li>Apply in late summer or early fall to sod not exceeding 3" in height.</li> <li>For control of emerged little barley, apply in February or March before the mid-boot stage of little barley.</li> </ul> </li> </ul>	
	· · ·	<ul> <li>Apply when bermudagrass is dormant.</li> <li>For control of little barley, apply before the mid-boot stage.</li> <li>Do not mow for hay until 40 days after treatment.</li> </ul>	
	Use Restrictions – Pasture Reseeding		
	Do not apply more than 3 applications per year.		
For Control of Endophyte Fungus- Infected Fescue Forage Legume/	0.7-1.3 pts followed by 0.7-1.3 pts	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray per acre by ground when fescue is actively growing and is no more than 4" high. If necessary, use split applications of 10-21 days apart. For spring plantings, the initial application of 0.7-1.3 pts may be made the previous fall.	
Grass Mixture and	Use Restrictions		
Other Grass	Do not allow fescue to go to seed starting with the preceding year's crop to reduce the infestation of		
Pastures	endophyte-infested grass.		
		than 2 applications per year.	
		ots per acre total in preparation for reseeding.	

For Prickly Pear	0.8 fl oz per gallon of	Apply specified dosage in sufficient volume to spray to wet the weed foliage using	
Desiccation in	water	knapsack, backpack sprayers, pump-up pressure sprayers, hand-guns, hand wands,	
Pastures	(spot sprays)	and other hand-held equipment which directs the spray onto weed foliage. Mix the	
(Not for use in CA)	(oper opicyo)	specified rate of Parazone 3SL with 1/3 fl oz of a nonionic surfactant per gallon of	
(NOTION USE IN ONY		water.	
,		Completely and uniformly cover all green prickly pear foliage with spray. Apply in May	
		through September for best desiccation results. Do not use more than 1.6 pints of	
		Parazone 3SL Herbicide per acre per year. Apply only to pastures with no more than	
		3" of height at time of treatment. Tank mix with Grazon® P+D Specialty herbicide at a	
		rate of 1-2 fl oz per gallon of water for improved desiccation and perennial control of	
		Prickly pear. Always refer to the Grazon P+D Specialty herbicide label for weeds	
		controlled, rates of applications, directions for use, limitations, and restrictions.	
	Use Restrictions		
	Do not apply more t	han 10 applications per year.	
For Juniper	1.3 pts	Apply specified dosage as a broadcast application during hot, dry weather conditions	
Species leaf	(usually July and August) in a minimum of 5 gallons of spray per acre by air. Use		
moisture reduction	in conjunction with prescribed burning as instructed and monitored by local SCS or		
or desiccation prior	University and Extension Range Specialists. Use 2% v/v nonionic surfactant in a		
to Prescribed	minimum of 5 gpa spray solution. Juniper leaf moisture content must be monitored;		
burning of pastures	however, maximum leaf moisture reduction usually occurs 3-4 weeks after Parazone		
(Not for use in CA)	3SL application. Significant soil moisture and/or wet weather conditions prior to or		
	after application will decrease the potential for Juniper crown burns. Cool or I		
		weather conditions also adversely affect leaf moisture reduction.	
Use Restrictions			
	1	han 10 applications per year.	
	Do not graze livestock after application or prior to burning.		
Native Pastures	1.0-1.25 pts	Apply specified dosage as a broadcast application in a minimum of 10 gallons of spray	
(Not for use in CA)	1	per acre by ground or 5 gallons of spray per acre by air. For the control of downy and	
		Japanese brome, apply in the spring after 90% node formation of brome species but	
		before full bloom. Emerged native perennial grasses will be burned by this	
		application, but application after 90% node formation will allow adequate time for	
	{	native grasses to recover and attain maximum growth in the use season. Apply only	
•		to pastures with no more than 3" of height at the time of treatment.	
· .	Use Restrictions		
·		han 2 applications per year.	
	<ul> <li>Do not apply more t</li> </ul>	han 1.25 pts per year.

#### STORAGE AND DISPOSAL

337-38

Do not contaminate water, food, or feed by storage and disposal.

#### PESTICIDE STORAGE:

Store in a cool, dry place and in such a manner as to prevent cross contamination with other pesticides, fertilizers, food and feed. Store in original container and out of reach of children, preferably in a locked storage area.

Do not store above 100°F for extended periods of time. Storage below 20°F can result in formation of crystals. If product crystallizes, store at 50°F to 70°F and agitate to redissolve crystals. If container is damaged or spill occurs, use product immediately or dispose of product and damaged container as indicated below.

#### PESTICIDE DISPOSAL:

Open dumping is prohibited. Pesticide wastes are toxic. Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility. Improper disposal of excess pesticide, spray mixture, or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency or the hazardous waste representative at the nearest EPA Regional Office for guidance.

# CONTAINER HANDLING:

#### NONREFILLABLE CONTAINERS:

#### Rigid, Nonrefillable containers small enough to shake (i.e. with capacities equal to less than five gallons).

Nonrefillable container. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. Then offer for recycling or reconditioning if available, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or a mix tank or collect rinsate at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Once container is rinsed, offer for recycling if available, or puncture and dispose of in a sanitary landfill.

#### Rigid, Nonrefillable containers that are too large to shake (i.e. with capacities greater than 5 gallons or 50 lbs).

Nonrefillable container. Do not reuse or refill this container. Triple rinse or pressure rinse container (or equivalent) promptly after emptying.

Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two more times. Offer for recycling or reconditioning if available, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Pressure rinse as follows: Empty the remaining contents into application equipment or a mix tank and continue to drain for 10 seconds after the flow begins to drip. Hold container upside down over application equipment or a mix tank or collect rinsate at about 40 PSI for at least 30 seconds. Drain for 10 seconds after the flow begins to drip. Once container is rinsed, offer for recycling if available, or puncture and dispose of in a sanitary landfill.

#### **REFILLABLE CONTAINERS:**

Refill this container with pesticide only. Do not reuse this container for any other purpose. Cleaning the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller.

#### **REFILLING OR RETURNING CONTAINERS:**

If refilling or returning container is planned, end users are not authorized to remove tamper evident cables, one way values or clean container.

#### **RECYCLE OR DISPOSAL OF CONTAINERS:**

End users are authorized to remove tamper evident cable as required to remove the product from the container unless the container is equipped with one way valves and refilling or returning is planned. Instructions for container rinsing and either recycling or disposal are as follows:

#### Bottom Discharge IBC (e.g. Schuetz Caged IBC or Snyder Square Stackable).

Pressure rinsing the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To pressure rinse the container before final disposal, empty the remaining contents from the IBC into application equipment or mix tank. Raise the bottom of the IBC by 1.5 inches on the side which is opposite of the bottom discharge valve to promote more complete product removal. Completely pump or drain rinsate into application equipment or mix tank. Raise the bottom discharge valve to promote more complete product removal. Completely pump or drain rinsate into application equipment or rinsate collection system while pressure rinsing. Continue pressure rinsing for 2 minutes or until rinsate becomes clear. Replace the lid and close bottom valve.

#### Top Discharge IBC, Drums, Kegs (e.g. Snyder 120 Next Gen, Bonar B120, Drums and Kegs).

Triple rinsing the container before final disposal is the responsibility of the person disposing of the container. Cleaning before refilling is the responsibility of the refiller. To triple rinse the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container about 10 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Rinse all interior surfaces. Pour or pump rinsate into application equipment or rinsate collection system. Repeat this rinsing procedure two more times.

#### CONTAINER IS NOT SAFE FOR FOOD, FEED, OR DRINKING WATER!

#### LIMITATION OF WARRANTY AND LIABILITY

Read the entire directions for use, conditions of warranties and limitations of liability before using this product. If terms are not acceptable, return the unopened product container at once.

By using this product, user or buyer accepts the following CONDITIONS, DISCLAIMER OF WARRANTIES and LIMITATIONS OF LIABILITY.

**CONDITIONS:** The directions for use of this product are believed to be adequate and must be followed carefully. However, it is impossible to eliminate all risks associated with the use of this product. Crop injury, ineffectiveness or other unintended consequences may result because of such factors as weather conditions, presence of other materials, or the manner of use or application, all of which are beyond the control of ADAMA. All such risks shall be assumed by the user or buyer.

**DISCLAIMER OF WARRANTIES:** To the extent consistent with applicable law, ADAMA makes no other warranties, express or implied, of merchantability or of fitness for a particular purpose or otherwise, that extend beyond the statements made on this label. No agent of ADAMA is authorized to make any warranties beyond those contained herein or to modify the warranties contained herein. To the extent consistent with applicable law, ADAMA disclaims any liability whatsoever for special, incidental or consequential damages resulting from the use or handling of this product.

**LIMITATIONS OF LIABILITY:** To the extent consistent with applicable law, the exclusive remedy of the user or buyer for any and all losses, injuries or damages resulting from the use or handling of this product, whether in contract, warranty, tort, negligence, strict liability or otherwise, shall not exceed the purchase price paid or at ADAMA's election, the replacement of product.

Lychee

Mango

- Do not apply within 14 days of harvest.
- Do not make more than 4 applications per year.
- If more than one application is to be made, maintain a minimum of 28 days between subsequent applications.
- Do not graze treated areas.
- Do not allow spray to contact fruit, foliage, or green stems (except suckers).
- Do not feed cover crops grown in treated areas to livestock.

Read the "LIMITATION OF WARRANTY AND LIABILITY" in the label booklet for Parazone 3SL before using.

# A Weed, Grass, and Harvest Aid Desiccant/Defoliant Herbicide

### SUPPLEMENTAL LABELING

This label expires on January 31, 2016 and must not be distributed or used after that date.

READ THE ENTIRE LABEL FOR PARAZONE 3SL BEFORE PROCEEDING WITH THE USE DIRECTION CONTAINED IN THIS SUPPLEMENTAL LABELING.

"Label" as used in this supplemental labeling refers to the label booklet for Parazone 3SL and this supplement.

ACTIVE INGREDIENT:	% BY WT.
Paraguat dichloride (1,1'-dimethyl-4,4'-bipyridinium dichloride)	43.8%
OTHER INGREDIENTS:	
TOTAL:	
Contains 3.0 pounds paraquat cation per gallon as 4.14 pounds salt per gallon.	

Contains stenching (odor) and emetic.

# TANK MIXING

#### Mixing Procedures

When tank mixing other products with Parazone 3SL, the following order must be followed:

- 9. Fill spray tank 1/2 full with clean water or other approved carriers;
- 10. Begin tank agitation and continue agitation throughout the mixing and spraying operations;
- 11. Add dry formulations (i.e. WP, DF, WDG, etc.) to the tank;
- 12. Add liquid formulations (i.e. SC, EC, L, F, etc.) to the tank <u>other than</u> fomesafen (i.e. Rumble, Vise, Reflex, etc.);
- 13. Add Parazone 3SL to the tank;
- 14. Add fomesafen formulation (i.e. Rumble, Vise, Reflex, etc.) to the tank;
- 15. Add spray surfactant to the tank; and
- 16. Fill the remainder of the spray tank.

Carefully read the labels of other pesticide products for mixing directions and restrictions that may be different.

To determine the compatibility of Parazone 3SL with other products, the following procedure should be followed: Pour the recommended proportions of the products into a suitable container of water, mix thoroughly and allow to stand at least five (5) minutes. If the combination remains mixed or can be re-mixed readily, the mixture is considered physically compatible. For further information contact your local ADAMA representative.

Tank Mixing for Improved Burndown of Difficult Weeds and Residual Weed Control: Parazone 3SL can be tank-mixed with certain other herbicides in order to obtain greater control of hard to control weeds. Best control is obtained when other photosynthetic inhibitor (PSI) herbicides are added with Parazone 3SL. These herbicides will cause the activity of Parazone 3SL to be slower, thus allowing it more time to distribute throughout the treated leaf. Weed control will be greater than when Parazone 3SL is applied alone.

The following PSI herbicides can be tank-mixed with Parazone 3SL: MANA Atrazine 90DF or other atrazinecontaining products; Phenomenon<sup>®</sup>; Phenomenon<sup>®</sup> Duo; Parallel<sup>®</sup> PCS; Bicep Magnum<sup>®</sup> Herbicide; Bicep Lite II Magnum<sup>®</sup> Herbicide; Canopy<sup>®</sup> Herbicide; Lariat<sup>®</sup> Herbicide; Lexone<sup>®</sup> Herbicide; Linex<sup>®</sup> Herbicide; Lorox<sup>®</sup> Herbicides; Lorox Plus<sup>®</sup> Herbicide; Princep<sup>®</sup> Herbicide; Glory<sup>™</sup> or other metribuzin-containing products; and Triangle<sup>™</sup> Herbicide. Be sure to read the respective product label(s) for rates of application, directions for use, limitations, restrictions, and for a list of weeds controlled.

Control of the following difficult to control broadleaf and grassy weeds will be enhanced by the addition of a PSI herbicide with Parazone 3SL: barnyardgrass, broadleaf signalgrass, cheatgrass, cocklebur, fall panicum, giant ragweed, knotweed, kochia, lambsquarters, malva (cheeseweed), marestail, morningglory, Pennsylvania smartweed, perennial weeds (suppression only), prickly lettuce, sedges, tansymustard, velvetleaf and volunteer wheat. For best results, make a second application.

Improved control of perennial broadleaf weeds such as Canada thistle, bindweed, dandelion, etc. or difficult to control annual broadleaf weeds such as giant ragweed or morningglory will result when Parazone 3SL is tankmixed with 2,4-D ester (low volatile), 2,4-DB, or Banvel<sup>®</sup> Herbicide. Reduced grass control may result if the amine formulation of 2,4-D is applied as a tank-mix with Parazone 3SL.

Read the "LIMITATION OF WARRANTY AND LIABILITY" in the label booklet for Parazone 3SL before using.
