**FOR TOMATOES AND PEPPERS - HOW AND WHEN TO USE**

Tomato and pepper plants frequently fail to set blossoms early in the season or during cold weather. This undesirable characteristic can be overcome without regard to variety or temperature by treating with this hormone-like product. Spraying it on the flowers will stimulate the formation of tomatoes or peppers. This is of particular value in localities where prevailing conditions interfere with effective pollination.

Ready to use - No mixing or dilution necessary. Apply as a directed fine spray to blossom and plant. This product aids in the production of larger tomato and pepper crops and earlier harvest.

**TOMATOES:**

At first bloom spray blossom clusters and entire plant with a fine spray. Repeat every seven days. Do not make more than 5 applications per season.

**PEPPERS:**

At first bloom spray blossom clusters and entire plant with a fine spray. Repeat every 14 days. Do not make more than 5 applications per season.

Tomato and Pepper Fruit Set Spray promotes fruit set and retention that produces an earlier harvest and bigger yields of meatier, larger tomatoes and peppers.
