DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with labeling.

For control of bacteria causing mine acid formation on active mine sites, mineral stockpiles and reclamation of disturbed lands, apply product at a rate not to exceed 1000 lb. (or 20 bags) with up to 3000 gal. of water/acre. The exact dosage is site-specific and will be determined by the on-site BFGoodrich authorized applicator. Dosage and dilution depend upon soil adsorption, permeability, slope, chemistry, etc., e.g., on compacted coal refuse with 2:1 slope and low neutralization potential, the dosage is likely to be 350 lb./acre diluted in 2000 gal. of water. **THE PRODUCT IS TO BE USED ONLY UNDER THE DIRECT SUPERVISION OF THE ON-SITE BFGOODRICH AUTHORIZED APPLICATOR.**

INTENDED USES AND DIRECTIONS FOR APPLICATION

For control of bacteria to retard acid generation on active mine sites, mineral storage areas, mineral waste disposal areas and reclamation of disturbed mine lands.

Apply product to site using a hydroseeder or other spraying or spreading equipment. Do not apply if raining or rain is expected within 24 hours. Immediately cover with soil or disc into surface. Seed and mulch.
