1/31

- b. The appropriate signal word for this product is "Danger."
- c. As per the acute toxicity review, the First Aid Statements should be placed in the following order:

IF ON SKIN OR CLOTHING:....

IF IN EYES:.....

IF SWALLOWED: .....

IF INHALED:....

- c. As per acute toxicity review, the Agency recommends that additional text should be added to the "Note to Physician" section that addresses the eye and skin irritation concerns to read as follows:
- technical information on symptomatology;
- use of supportive treatments to maintain life functions;
- medicine that will counteract the specific physiological effects of the pesticides;
- company telephone number to specific medical personnel who can provide specialized medical advice.
- d. Revise the Note to Physician section by adding the following statement to read as follows:

"Note to Physician: Probable mucosal damage may contraindicate the use of gastric lavage."

e. As per the acute toxicity review, the Harzards to Humans and Domestic Animals must be revised to read as follows:

"DANGER. Corrosive. Fatal if absorbed through skin. Causes irreversible eye damage. Causes skin damage. Do not get on skin, in eyes, or on clothing. Harmful if swallowed. Wear coveralls over long sleeved shirt and long pants, goggle or face shield, chemical-resistant footwear plus socks, and chemicalresistant gloves made of any waterproof material, chemical resistant apron for mixing, loading, and cleaning equipment, and chemical resistant headgear for overhead exposure." "Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables exist, use detergent and Hot water. Keep and wash PPE separately from other laundry."

"Discard clothing and other absorbent materials that have been drenched or heavily contaminated with this product's concentrate. Do not reuse them."

g. As per the acute toxicity review, the User Safety Recommendations to read as follows:

## User Safety Recommendations

User should wash hands before, eating, drinking, chewing gum, using tobacco, or using the toilet.

User should remove clothing/PPE immediately if pesticide gets inside. Then wash thoroughly and put on clean clothing.

User should remove PPE immediately after handling this product. As soon as possible, wash thoroughly and change into clean clothing. Wash the outside of gloves before removing.

h. Revise the Environmental Hazards section to read as follows:

"This pesticide is toxic to fish and aquatic invertebrates and may contaminate water through runoff. This product has the potential for runoff for several months or more after application. Poorly drained soils and soils with shallow water tables are more prone to product runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas."

Do not apply directly to water, to areas where surface water is present, or to intertidal areas below the mean high water mark. Do not contaminate water when disposing of equipment wash waters or rinsate." For terrestrial use. This pesticide is toxic to fish and aquatic invertebrates and may contaminate water through runoff.

"Do not discharge effluent containing this product.....For guidance contact your State Water Board or Regional Office of the EPA."

j. Revise the Storage and Disposal section as per PR Notice 2007-1.

If these conditions are not complied with, the registration will be subject to cancellation in accordance with FIFRA sec.6(e). Your release for shipment of the product constitutes acceptance of these conditions.

Submit two (2) copies of the revised labeling bearing the labeling revisions listed above. A stamped copy of the label is enclosed for your records.

If you have questions concerning this matter, please contact me at (703) 308-6341 or by email at swindell.marshall@epa.gov or Karen M. Leavy at (703)308-6237 or by email at leavy.karen @epa.gov.

Sincerely,

indell Marshall Swindell

#### STORAGE AND DISPOSAL

Under the Federal Insecticide, Fungicide, and Rodenticide Act as **Prohibition:** Do not contaminate water, food or feed by storage or disposal. Storage: Store in a safe place away from PETS AND KEEP OUT OF THE REACHOM CHILDREN sticide, Store away from excessive heat. Magna-Bon Bahama Klear will freeze. Always keep container Episeen. No. 66675-3 Store Magna-Bon Bahama Klear in its original container only. [Bulk Magna-Bon Bahama Klear shall be stored and handled in 316L stainless steel, fiberglass, PVC's, polypropylenes or plastic equipment.]<sup>1</sup> Keep away from galvanized pipe and any nylon storage handling equipment.

Pesticide Disposal: Excess Magna-Bon Bahama Klear should be disposed of through label use. Do not contaminate lakes, rivers or streams as this may cause fish kill. [Pesticide wastes are acutely hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal law. If these wastes cannot be disposed of by use according to label instructions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste representative at the nearest EPA Regional Office for guidance. ]<sup>2</sup> In the event of a spill, neutralize with limestone or baking soda before disposal. Concentrate may deteriorate concrete.

Container Disposal: Do not reuse empty container. Triple rinse (or equivalent). Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other approved State and local procedures. [Rinsing and reuse of "totes" is permissible.]

## PRECAUTIONARY STATEMENTS

### Hazards To Humans And Domestic Animals

DANGER. Corrosive: Causes irreversible eye damage and skin irritation. Do not get into eyes or on clothing. Wear goggles or safety glasses. Harmful if swallowed, inhaled or absorbed through the skin. May cause allergic skin response. Avoid contact with skin. Wash thoroughly with soap and water after handling.

#### **ENVIRONMENTAL HAZARDS**

This pesticide is toxic to fish. [Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

For Terrestrial Uses: This pesticide is toxic to fish and aquatic organisms. Do not apply directly to water or areas where surface water is present or to intertidal areas below the mean high mark. Do not contaminate water when disposing of equipment washwaters or rinsate. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas. This product may contaminate water through runoff. Poorly draining soils and soils with shallow water tables are more prone to produce runoff that contains this product. Drift and runoff may be hazardous to aquatic organisms in water adjacent to treated areas.

Waters treated with this product may be hazardous to aquatic organisms. Treatment of aquatic weeds and algae can result in oxygen loss from decomposition of dead algae and weeds. This oxygen loss can cause fish and invertebrate suffocation. To minimize the hazard, do not treat more than ½ of the water body to avoid depletion of oxygen due to decaying vegetation. Wait at least 10 to 14 days between treatments. Begin treatment along the shore and proceed outwards in bands to allow fish to move into untreated areas. Consult with the State or local agency with primary responsibility for regulating pesticides before applying to public waters, to determine if a permit is required.

Certain water conditions including low pH (<6.5), low dissolved organic carbon (DOC) levels (3.0 mg/L or lower), and "soft" waters (i.e. alkalinity less than 50 mg/L), increases the potential acute toxicity to nontarget aquatic organisms.

Drift and runoff may be hazardous to agatic organisms in waters adjacent to treated areas.

Amended August 7, 2007/ Page2 of 27

## **GENERAL INFORMATION**

Magna-Bon Bahama Klear is a copper sulfate pentahydrate formulation used to control bacteria and algae in swimming pools and outdoor hot tubs and spas. It is used as a post harvest wash to control bacteria and fungi that cause spoilage in fruits and vegetables and is used on growing agricultural commodities to control bacteria and fungi.

Using water containing moderate to high amounts of sulfur may cause Magna-Bon Bahama Klear to neutralize. Whenever possible, use a compatibility jar test before mixing a whole tank.

#### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling. This pesticide is toxic to fish and aquatic invertebrates. Do not discharge effluent containing this product into lakes. streams, ponds, estuaries, oceans or other waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA. Do not contaminate water when disposing washwaters or rinsate.

Do not apply this product in a way that will contact workers or other persons, either directly or through drift. Only protected handlers may be in the area during application. For any requirements specific to your State or Tribe, consult the State or Tribal agency responsible for pesticide regulation.

### **Application:**

For control of algae and odor causing bacteria in swimming pools, outdoor hot tubs and spas, add EPTED with COMMENTS Magna-Bon Bahama Klear as per chart below. in EPA Letter Dated:

| Swimming                         | Water<br>15,000 Gal           | Magna-Bon SEP 2 9 2010<br>Bahama KlearSEP 2 9 2010<br>1 - 3 Quarted the Federal Insecticide,  |

| Outdoor<br>Hot Tubs<br>and Spas: | 235 Gal<br>470 Gal<br>700 Gal | 1 Ounces 66675-3<br>2 Ounces<br>3 Ounces  |

Application should be made before visible algae appear. Where visible algae is present, apply at the higher rate. For maintenance dosages and where visible algae are not present, use the lower rate. Repeat maintenance dosages to maintain the recommended concentration and avoid excessive build up of metallic copper. Magna-Bon Bahama Klear may be used at the higher rates to help control odors and algae during the winter months while the pool is not being used. Recommended application rates yield (1 ppm to 3 ppm) metallic copper.

To control algae and bacteria in swimming pools, spas & hot tubs: Apply at the rate of 2 - 4 quarts of Magna-Bon Bahama Klear per 60,000 gallons. This will provide a level of 0.5 ppm to 1.0 ppm metallic copper. Application should be made before visible algae appear. Where visible algae are present, apply at the higher rate. For maintenance dosages and where visible algae are not present, use the lower rate. Repeat maintenance dosages to maintain the recommended concentration and avoid excessive buildup of metallic copper. Magna-Bon Bahama Klear may be used to help control pool odors and algae during winter months. Maintain the higher rate while the pool is not being used during the winter. Do not discharge treated pool effluent where it will drain into lakes, streams, ponds, or public water.]<sup>4</sup>

Amended August 7, 2007/ Page3 of 27

<sup>1</sup> The language in parenthesis is only required on bulk containers, not on retail containers. .

<sup>2</sup> This language is only required to appear on the bulk and non-household-use containers, not on household-use containers. It will not appear on household-use containers

<sup>3</sup> In compliance with PR Notice 95-1, this effluent discharge statement will appear on containers that are equal to or greater than 50 lbs./5 gallons Per PR Notice 95-1, this language is not required for containers less than 50 pounds/5 gallons.

#### **General Algae/Bacteria Control:**

For suppression of bacterial odors and for control of algae, apply in late spring or early summer when algae and bacteria first appear. The dosages are variable and depend upon algae/bacteria species, water hardness, water temperature, amount of algae/bacteria present, as well as whether water is clear, turbid, flowing or static. Preferably, the water should be clear with the temperature above 60 °F or 15.6 °C. Higher dosages are required at lower temperatures, higher algae/bacteria concentration, and for hard waters. Application should be done by pouring Magna-Bon Bahama Klear directly from the container into the pool, outdoor hot tub or spa. Several application points speed up dispersal. Static water requires less chemical for algae/bacteria control than does flowing water. Use higher dosages for Chara, Nitella and filamentous algae (pond scum), and lower dosages for planktonic algae. If there is uncertainty about the dosage, begin with a lower dose and increase until control is achieved, or until the maximum allowable level has been reached.

For Use as a Post Harvest Wash an Agricultural Commodities: To use as an algicide, bactericide, fungicide post harvest wash the following directions apply.

For use as a post harvest wash, this product may be applied with any type of application equipment that gives thorough and uniform coverage. Devices may include, but are not limited to, dunk and dip tanks, spray applicators or fogging.

Washing raw agricultural commodities will both clean and control bacteria and fungi that cause spoilage. Depending on water quality and cleaning conditions, or when adding new processing water, add from one hundred three (103) up to one hundred twenty eight (128) fluid ounces of Magna-Bon Bahama Klear per one thousand (1,000) gallons of water. Allow thorough coverage of the commodity and then let dry. Rinsing is not required or recommended.

Depending on water quality, cleaning conditions or when adding new processing water, start at lower rinse rates. Add Bahama Klear as per the chart below. ACCEPTED

Remember: Commodities need only be immersed long enough to allow complete coverage.

FOR USE AS A FUNGICIDE/BACTERICIDE ON GROWING AGRICULTURAL COMMODITIES: For use as a systemic fungicide/bactericide on growing agricultural commodities, the following directions apply.

### **GENERAL INSTRUCTIONS**

Bahama Klear may be applied with any type of application equipment that gives uniform coverage of all foliage, including ground, aerial and low volume sprayers as specified on this label. Equipment used for application should be PVC or 316L stainless steel. Bahama Klear is compatible with most fungal and insecticidal biopesticides when applied at least two (2) days before or after application of the biopesticide. Phytotoxicity – Although Bahama Klear has been tested on a wide variety of fruits, vegetables and nuts without phytotoxicity, there could be some varieties and cultivars that because of environmental factors and stages of growth could possibly foster systems. The per acre use rate of Bahama Klear is applicable for dilute spraying. Depending on the equipment used and the specific crop, the spray volume applied per acre will differ. Refer to the Minimum Recommended Spray Volume Table. Complete spray coverage is essential to assure optimum performance from Bahama Klear. When treating by aerial application or with low volume application equipment, unless you have had specific previous experience, it is advisable to test for compatibility and tolerance to crop injury prior to full scale commercial utilization.

- 1 The language in parenthesis is only required on bulk containers, not on retail containers.
- 2 This language is only required to appear on the bulk and non-household-use containers, not on household-use containers. It will not appear on household-use containers
- 3 In compliance with PR Notice 95-1, this effluent discharge statement will appear on containers that are equal to or greater than 50 lbs/5 gallons Per PR Notice 95-1, this language is not required for containers less than 50 pounds/5 gallons.
- 4 This is alternate Directions for Use language.

### **GENERAL INSTRUCTIONS Cont.**

Consult Bahama Klear label for specific rates and timing of application by crop. Where application rates and intervals are provided in a range (e.g., 2-4 fluid ounces and 7 to 10 days) the higher rates and shorter spray time intervals are recommended when rainfall is heavy and/or disease pressure is high. Use the higher rates for large mature tree crops. The use of a surfactant, such as Cell-U-Wett™ is acceptable for plants having waxy or hairy surfaces. Bahama Klear works via surface contact with the plants and materials being treated. It is important to ensure that all surfaces are thoroughly wetted. Bahama Klear does not produce any visible residue or have a distinct odor. It does have a residual, especially if applied with a surfactant.

### **SPECIAL PRECAUTIONS**

- Do not mix with acidic compounds such as Alliette™ within 14 days before or after application of same.
- This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.
- Environmental conditions such as extended periods of wet weather, acid rain, etc., which alter the pH of the leaf surface may effect the performance of Bahama Klear resulting in possible phytotoxicity or loss of effectiveness.
- Do not mix with pot ash.
- It must be determined in the selection process if proper application equipment is available and if the waste associated with its use can be properly handled. Materials used on the construction of application equipment is also an important factor as agricultural chemicals are often reactive with application equipment is also an important factor as agricultural shorterials such as plastics, rubbers, etc. soft metals such as aluminum and even some synthetic materials such as plastics, rubbers, etc. Therefore it is necessary when working with equipment containing these materials, that the SPTED Therefore it is necessary when working with equipment containing these materials, that the SPTED thoroughly flushed with clean water after each days use. in EPA Letter Dated:

AGRICULTURAL USE REQUIREMENTS Use this product only in accordance with its labeling and with the Workers Protection Standard. 40 CFR part 170. This Standard contains requirements for the protection of agricultural workers on farms, forests, nurseries, greenhouses and handlers of agricultural pesticides. It contains requirements for training, decontamination, notification and emergency assistance. It also contains specific instructions and exceptions pertaining to the statements on this label about personal protective equipment (PPE), notification to workers, and restricted-entry intervals. The requirements in this box only apply to uses of this product that are covered by the Workers Protection Standard. Do not enter or allow worker entry into treated areas during the restricted entry interval (REI) of 48 hours. Do not enter or allow others to enter until sprays have dried. PPE required for early entry to treated areas that is permitted under Worker Protection Standard and that involves contact with anything that has been treated, such as plants, soil, water, is: coveralls, protective evewear, chemical resistant gloves, and shoes plus socks. ACCEPTED with COMMENTS EPA Letter Dated: NON-AGRICULTURAL USE REQUIREMENTS SEP 2 9 2010 The requirements in this box apply to uses of this product that are not within the scope of the Workers Protection Standard for agricultural pesticides, 40 CFR part 170. The WPS applies Inder the Federal Insecticide, Fungicide, and Rodenticide Act as when this product is used to produce agricultural plants on farms, forests, nurseries or amended, for the pesticide, greenhouses. Do not allow re-entry into treated areas until sprays have dried. registered under EPA Reg. No. 66675-3 **GENERAL CHEMIGATION INSTRUCTIONS** Apply this product only through one or more of the following types of systems: Sprinkler including center pivot, lateral move, end row, side (wheel) roll, traveler, big gun, solid set or hand move: flood (basin);

pivot, lateral move, end row, side (wheel) roll, traveler, big gun, solid set or hand move: flood (basin); furrow; border or drip (trickle) irrigation and system(s). Do not apply this product through any other type of irrigation systems.

Crop injury, lack of effectiveness, or illegal pesticide residues in the crop can result from non-uniform distribution of treated water.

If you have questions about calibration, you should contact State Extension Service specialists, equipment manufacturers or other experts.

Do not connect an irrigation system (including greenhouse systems) used for pesticide application to a public water system unless the pesticide label prescribed safety device for public water systems are in place.

A person knowledgeable of the chemigation system and responsible for its operation or under the supervision of the responsible person, shall shut the system down and make necessary adjustments should the need arise. Posting areas to be chemigated is required when 1) any part of a treated area is within 300 feet of sensitive areas such as residential areas, labor camps, businesses, day care centers, hospitals, in-patient clinics, nursing homes or any public areas such as schools, parks, playgrounds or other public facilities not including public roads, or 2) when chemigated area is open to the public such as golf courses or retail greenhouses.

Posting must conform to the following requirements. Treated areas shall be posted with signs at all usual points of entry and along likely routes of approach from the listed sensitive area. When there are no usual points of entry, signs must be posted in the corners of the treated areas and in English. Signs must be posted prior to application and must remain posted until foliage has dried and soil surface water has

## **GENERAL CHEMIGATION INSTRUCTIONS Cont'd.**

disappeared. Signs may remain in place indefinitely as long as they are composed of materials to prevent deterioration and maintain legibility for the duration of the posting period.

All words shall consist of letters of at least 2 ½ inches tall, and all letters and the symbol shall be in a color which sharply contrasts with their immediate background. At the top of the sign shall be the words KEEP OUT, followed by an octagonal stop sign symbol at least 8 inches in diameter containing the word STOP. Below the symbol shall be the words PESTICIDES IN IRRIGATION WATER.

This sign is in addition to any sign posted to comply with the Workers Protection Standard.

### CHEMIGATION SYSTEMS CONNECTED TO PUBLIC WATER SYSTEMS

Public water system means a system for the provision to the public of piped water for human consumption if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year.

Chemigation systems connected to public water systems must contain a functional, reduced pressure zone, backflow preventer (RPZ) or the functional equivalent in the water supply line upstream from the point of pesticide introduction. As an option to the RPZ, the water from the public water system should be discharged into a reservoir tank prior to pesticide introduction. There shall be a complete break (air gap) between the flow outlet end of the fill pipe and the top of the overflow rim of the reservoir tank of at least twice the inside diameter of the fill pipe.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of liquid back toward the injection.

The pesticide injection pipeline must contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops, or in cases where there is no water pump, when the water pressure decreases to the point where the pesticide distribution is adversely affected. Systems must use a metering pump, such as a positive displacement injection pump (i.e. diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

When mixing, agitation is not necessary. Adjust the pH of the water to 7 or below. If using stickers, spreaders, insecticides, nutrients, etc., add Bahama Klear **last**. If compatibility is in question, use a compatibility jar test before mixing a whole tank. Because of a wide variety of possible combinations which can be encountered, observe all cautions and limitations on the label of all products used in the mixtures.

ACCEPTED

Bahama Klear may be added through a traveling system continuously or at the last an original solid set or hand moved irrigation systems. Bahama Klear readily disperses and needs magination Dated:

### SEP 2 9 2010

Under the Federal Insecticide, Fungicide, and Rodenticide Act as amended, for the pesticide, registered under EPA Reg. No. 66675-3

Amended August 7, 2007/ Page7 of 27

### SPRINKLER CHEMIGATION

The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination from back flow.

The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of fluid back toward the injection pump.

The pesticide injection pipeline must also contain a normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.

The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.

The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Systems must use a metering pump, such as a positive displacement pump (i.e., diaphragm pump) effectively designed and constructed of materials that are compatible with pesticides and capable of being fitted with a system interlock.

Do not apply when wind speed favors drift beyond the area intended for treatment.

When mixing, agitation is not necessary. Adjust the pH of the carrier water to 7 or below. If using stickers, spreaders, insecticides, nutrients, etc., add the Bahama Klear **last**. If compatibility is in question, use a compatibility jar test before mixing a whole tank. Because of a wide variety of possible combinations which can be encountered, observe all cautions and limitations on the label of all products used in the mixtures.

May be added through a traveling irrigation system or at the last 30 minutes of solid set or hand moved irrigation systems. Bahama Klear readily disperses and needs no agitation.

### FLOOR (BASIN), FURROW AND BORDER CHEMIGATION

ACCEPTED

Systems using a gravity flow pesticide dispensing system must meter the pesticide into the water COMMENTS head of the field and downstream of a hydraulic discontinuity such as a drop structure or weir box to Letter Dated: decrease potential for water source contamination from back flow if water flow stops. SEP 2.9 2010

Systems utilizing a pressurized water and pesticide injection system must meet the follow Hinder the Federal Insecticide, Fungicide, and Rodenticide Act as amended, for the pesticide,

- a. The system must contain a functional check valve, vacuum relief valve, and low pressure drain appropriately located on the irrigation pipeline to prevent water source contamination back flow.
- b. The pesticide injection pipeline must contain a functional, automatic, quick-closing check valve to prevent the flow of liquid back toward the injection pump.
- c. The pesticide injection pipeline must also contain a functional, normally closed, solenoid-operated valve located on the intake side of the injection pump and connected to the system interlock to prevent fluid from being withdrawn from the supply tank when the irrigation system is either automatically or manually shut down.
- d. The system must contain functional interlocking controls to automatically shut off the pesticide injection pump when the water pump motor stops.
- e. The irrigation line or water pump must include a functional pressure switch which will stop the water pump motor when the water pressure decreases to the point where pesticide distribution is adversely affected.

Bahama Klear may be added through a traveling irrigation system continuously or at the last 30 of solid set or hand moved irrigation systems. Bahama Klear readily disperses and needs no agitation.

#### FOR SPRAY AND SOIL DRENCH APPLICATIONS

Always spray for total foliage coverage. When re-spraying the rates and severity of the disease vary with unforeseen conditions. However, in the event of severe disease, spraying intervals can be shortened to 3 to 5 days. At times, lower rates can be as effective as higher rates and should be tried first. Usually, preventive programs may be maintained at lower rates. Use of low volume spraying is effective against Botrytis and not effective against established powdery mildew and Xanthomonas infections. Also, applications on actively growing tissue may be more effective than applications on dormant tissue.

#### MINIMUM RECOMMENDED SPRAY VOLUME (GALLONS) PER ACRE WHEN APPLYING BAHAMA KLEAR

\*Pesticide application equipment such as Curtec® or other similar sprayers which are capable of obtaining coverage at low volumes may be used at as low as 20 gpa of spray volume.

The following specific instructions are based on general application procedures. The recommendations of the State Extension Service should be closely followed as to timing, frequency and numbers of sprays per season.

### FROST INJURY PROTECTION BACTERIAL ICE NUCLEATION INHIBITOR

Application of Bahama Klear made to all crops listed on this label at rates and stages of growth indicated on this label, at least 24 hours prior to anticipated frost conditions, will afford control of ice nucleating bacteria (<u>Pseudomonas syringae</u>, <u>Erwinia herbicola and Pseudomonas flourescens</u>) and may therefore provide some protection against light frost. Not recommended for those geographical areas where weather conditions favor severe frost.

The chart below is used to calculate correct ppm's\* of active ingredient (A.I.) per volume of carrier water. These volumes can be used for either conventional or concentrated sprays.

#### AMOUNT OF BAHAMA KLEAR PER VOLUME OF WATER FOR PROPER PPM'S\* OF APPLIED ACTIVE INGREDIENT (AS COPPER)

Rate/Acre Crop Disease ppm's (copper) Instructions per 100 gallons of water **Bacterial Blast** 51.2-64 oz. Almond, 200-250 ppm Make first application before fall (Pseudomonas), Bacterial Apricot, rains and a second at late Cherry. Canker, Corvneum Blight dormant. Use the higher rates Plum Prune (Shot Hole) when conditions favor disease. If needed, agricultural-type spray oil may be added. For Cherries: Where disease is severe, an additional application shortly after harvest may be required. NOTE: Foliar injury may occur from post-bloom sprays on almonds, especially on NePlus varieties. Blossom Brown Rot. 51.2-64 oz. on 200-250 ppm Apply during early bloom. Do not **Coryneum Blight (Shot** almond. All apply after full bloom or injury others 60-90 Hole) may occur. Use the higher rates 07 when rainfall is heavy and disease pressure is high. Black Knot\* (Plum) 32-64 oz. 125-250 ppm Make application at bud swell up to early bloom for early disease suppression. Apply before full bloom. Use the higher rates when rainfall is heavy and disease pressure is high. NOTE: To avoid plant injury, do not use after full bloom. Cherry Leaf Spot\* (Sour 38.4-64 oz. 150-250 ppm Apply at petal fall as well as 1 to Cherries Only) 2 times after petal fall. Use the lower rates where disease infection is light and use the higher rates for a dormant application or where disease infection is moderate to heavy. Dormant/ Late Do not apply to sweet cherry or Dormant 7 the English Morello variety as davs 8.0 lb.1 severe injury will result. NOTE: Moderate to severe injury such Bloom/growing as leaf spotting and defoliation season 5 may occur from post bloom 18.0 lb.<sup>2</sup> days<sup>3</sup> 1.5 lb.1 applications.

## **GREENHOUSE and SHADEHOUSE CROPS**

Notice to Users: Magna-Bon Bahama Klear may be used in greenhouses and shade houses to control diseases on crops which appear on this label, and specific instructions have been developed for crops listed. The grower should bear in mind the sensitivity of crops grown in greenhouses and shadehouses differs greatly from crops grown under field conditions. Neither the manufacturer nor the seller has determined whether or not Magna-Bon Bahama Klear can be used safely on all green house and shadehouse grown crops. Consequently, injury arising from the use of Magna-Bon Bahama Klear on these types of greenhouse and shadehouse crops is the responsibility of the user. The user should determine if Magna-Bon Bahama Klear can be used safely prior to commercial use. In a small area, apply the recommended rates to the plants in question, i.e. foliage, fruit etc., and observe for 7 to 10 days for symptoms of phytotoxicity prior to commercial use.

Apply Magna-Bon Bahama Klear according to specific rates given for those crops in ounces per acre. **One fluid ounce = 29.5 milliliters = 6 teaspoons per 1,000 square feet is equivalent to 21.5 ounces per acre.** Magna-Bon Bahama Klear should be applied in adequate water for thorough coverage of plant parts. Begin application at first sign of disease and repeat at 7 to 14 day intervals or as needed; use shorter spray intervals during periods when severe disease conditions persist.

**NOTE:** Phytotoxicity may occur on young tender flush when Magna-Bon Bahama Klear is applied to citrus seedlings grown in greenhouses or shadehouses.

| Сгор  | Disease   | Rate             | Instructions   |
|---|---|------------------|--|
| Citrus (Non-Bearing<br>Nursery)   | Brown Rot, Citrus<br>Canker, Greasy Spot,<br>Melanose, Pink Pitting,<br>Scab  | 15 milliliters   | Begin applications when disease<br>first threatens. Repeat at 30 day<br>intervals or as needed depending<br>on disease severity.   |
| Cucumber  | Angular Leaf Spot,<br>Downy Mildew  | 5-12 milliliters | Apply weekly when plants begin<br>to vine. Use the higher rates<br>when conditions favor disease.  |
| Eggplant  | Alternaria Blight,<br>Anthracnose,<br>Phomopsis   | 9 milliliters    | Begin applications prior to<br>development of disease<br>symptoms. Repeat at 7 to 10 day<br>intervals or as needed depending<br>on disease pressure.   |
