MILDEWCIIDE APPLICATIONS

To be used only as an industrial mildewcide for the control of fungal and algal growth in paint films, coatings, stains, and polymer latices.

Acticide PM is a mildewcide for addition to polymer emulsions including styrene-acrylic and styrene-butadiene latices, polyvinylacetate latices and other water-based polymer latices for use in paints and special purpose coatings and in architectural and product coatings. Not for incorporation in products used to paint swimming pools.

Add Acticide PM at levels of 0.20% to 2.5% (wt/wt) based on the coating, paint or polymer emulsion used on the surface. For interior latex paints or coatings, apply Acticide PM at levels of 0.20% to 0.75% (wt/wt). For exterior latex emulsions and solvent based formulations, use 0.20% to 1.0% (wt/wt). However, for exterior use in highly demanding climates, at higher temperatures and under higher humidity conditions, (where high fungi and algae levels may be present), up to 2.5% Acticide PM may be required for ultimate protection of the dried films. Apply during or following pigment grinding operation.

It is recommended the formulator perform cost-performance evaluations to determine the optimum dosage rate for their particular system. If questions arise concerning other modifications or conditions, contact Acti-Chem Specialties, Inc., in Trumbull, CT.
