DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

***Special Purpose Coating Uses:** Include use as a: <> preservative for electrodeposition paints or solutions, <> preservative for photoplating solutions or coatings, <> preservative in fount (or fountain) solutions used in the printing process as a maintenance fluid/coating and as a special coating for printing plates, and <> preservative in spin finish coatings for fibers. * Not approved for this use in the State of California.

The application/addition directions for these special purpose coating uses are:

***Electrodeposition:** ACTICIDE® LA microbiocide is recommended as a tankside additive for the control of bacteria, fungi, and algae in re-circulating electrodeposition systems and associated rinse systems. Alternately, ACTICIDE® LA microbiocide may be added through the components of the electrodeposition paint prior to their addition to the electrodeposition system.

***Tankside Addition To Electrodeposition Systems:** ACTICIDE® LA microbiocide should be dispensed into the recirculating rinse system, ultrafilter permeate, or final distilled rinse system at a point to insure uniform mixing. When the system is noticeably fouled, add 640 to 2400 ppm ACTICIDE® LA microbiocide (6.4 to 24 gallons per 10,000 gallons of fluid in the system). Repeat until control is achieved. When microbial control is evident, add 320 to 1055 ppm ACTICIDE® LA (3.2 to 10.55 gallons per 10,000 gallons of fluid in the system) weekly or as needed to maintain the system. A change of frequency of treatment may be required depending on the rate of dilution of the preservative with the makeup fluid, the nature and severity of contamination, level of control required, filtration effectiveness, system design, etc. * Not approved for this use in the State of California

***Treatment Of Electrodeposition Paint Components:** Initial Dose of Paint Components: ACTICIDE® LA microbiocide should be added to the resin, pigment, or other component of the electrodeposition paint at a level to ensure that the final use-dilution fluid will contain 320 to 2400 ppm product. * Not approved for this use in the State of California

***Supplemental Tanked Dosing of Electrodeposition System:** If additional microbial control is necessary, ACTICIDE® LA microbiocide may be added to the electrodeposition system tankside to supplement the microbiocide incorporated through paint components. If the system becomes noticeably fouled, add 640 to 2400 ppm ACTICIDE® LA microbiocide (6.4 to 24 gallons per 10,000 gallons of fluid in the system). Repeat until control is achieved. When microbial control is evident, the system can be maintained by addition of 320 to 1055 ppm. ACTICIDE® LA microbiocide (3.2 to 10.55 gallons per 10,000 gallons of fluid in the system) weekly or as needed. * Not approved for this use in the State of California
