**MILDEWCIDE APPLICATIONS**

To be used only as an industrial mildewcide for the control of fungal and algal growth in paint films, coatings, stains and polymer latices.

Acticide SR-1216/6 is a mildewcide for addition to polymer emulsions including styrene-acrylic and styrene-butadiene latices, polyvinylacetate latices and other water-based polymer latices for use in paints and special purpose coatings and in architectural and product coatings. Not for incorporation in products used to paint swimming pools.

Add Acticide SR-1216/6 at levels of 0.20% to 2.5% (w/w) based on the coating, paint or polymer emulsion used on the surface. For interior latex paints or coatings, apply Acticide SR-1216/6 at levels of 0.20% to 0.75% (w/w). For exterior latex emulsions and solvent based formulations, use 0.20% to 1.0% (w/w). However, for exterior use in highly demanding climates, at higher temperatures and under higher humidity conditions, (where high fungi and algae levels may be present), up to 2.5% Acticide SR-1216/6 may be required for ultimate protection of the dried films. Apply during or following pigment grinding operation.

It is recommended the formulator perform cost-performance evaluations to determine the optimum dosage rate for their particular system. If questions arise concerning other modifications or conditions, contact Acti-Chem Specialties, Inc., in Trumbull, CT.
