Subject:

CPPC Tsunami, EPA Reg. No. 67619-12

Dear Ms. Mitchell:

Clorox Professional Products Company has submitted a final printed label for this product in response to the Agency's letter dated May 13, 2009. We have complied with all comments; however, this notification revises the container rule text based on guidance from Nancy Fitz and the Container-Containment Label Workgroup.

In the letter dated May 13, 2009, EPA listed the following condition: EPA's condition #1:

The Agency defines "refillable" as follows: "Refillable container" means a container that is intended to be filled with pesticide more than once for sale or distribution. The registrant determines whether a container is intended to be refilled for sale or distribution (in which case it is a refillable container) or if it is not intended to be refilled for sale or distribution (in which case it is not a refillable container) and implements its decision by labeling the container appropriately. Therefore, each proposed Storage and Disposal statement must include the following statement: "Nonrefillable container. Do not reuse or refill empty container."

### Clorox's response to condition #1:

In our final printed label notification, we complied with this condition; however, on this notification we have removed the phrase "Nonrefillable container" under the section for canisters or buckets intended to be refilled by the consumer. We also added the statements "Do not reuse or refill except as described in the directions for use." and "Refill only with this product."

We are enclosing a copy of the email from Nancy Fitz (EPA) to Elizabeth Brown dated March 18, 2009 where EPA waived this requirement. Item #2 states "For canisters or tubs that are intended to be refilled by consumers, we are waiving the requirement in §156.140(a)(1) for the label to state "Nonrefillable container." because that statement could be confusing to consumers."

### The following is only for products with medical devices listed on the label:

This product is not to be used as a terminal sterilant/high level disinfectant on any surface or instrument that (1) is introduced directly into the human body, either into or in contact with the bloodstream, or normally sterile areas of the body, or (2) contacts intact mucous membranes, but which does not ordinarily penetrate the blood barrier or otherwise enter normally sterile areas of the body. This product may be used to preclean or decontaminate critical or semi-critical medical devices prior to sterilization or high level disinfection.

### Special Instructions for Use Against HIV-1, HBV and HCV

This product kills HIV-1. HBV and HCV on precleaned environmental surfaces/objects previously soiled with blood/body fluids in health care settings or other settings in which there is an expected likelihood of soiling of inanimate surfaces/objects with blood or body fluids, and in which the surfaces/objects likely to be soiled with blood or body fluids can be associated with the potential for transmission of Human Immunodeficiency Virus (HIV-1) (associated with AIDS), Human Hepatitis B Virus (HBV) and Human Hepatitis C Virus (HCV).

Special instructions for using this product to clean and decontaminate against HIV-1, HBV and HCV on surfaces/objects soiled with blood/body fluids: Personal Protection: When handling items soiled with blood or body fluids, use disposable impervious gloves, gowns, masks and eye coverings. Cleaning Procedure: Blood and other body fluids must be thoroughly cleaned from surfaces and other objects before applying this product. Contact Time: Allow surfaces to remain wet for 30 seconds, [rinse and] let air dry. For all other organisms, see directions for contact times. Disposal of Infectious Materials: Use disposable impervious gloves, gowns, masks and eye coverings. Blood and other body fluids should be autoclaved and disposed of according to local regulations for infectious waste disposal.
