# GREYHOUND™ INSECTICIDE

For Use by Professional Arborists/Applicators

**ACTIVE INGREDIENT:**

Abamectin B <sub>1</sub> * .....	2%
<b>OTHER INGREDIENTS</b> .....	98%
Total .....	100%

\*A mixture of avermectins containing ≥ 80% avermectin B<sub>1a</sub> (5-0-demethyl avermectin A<sub>1a</sub>) and ≤ 20% avermectin B<sub>1b</sub> (5-0-demethyl-25-de(1-methyl-propyl)-25-(1-methylethyl) avermectin A<sub>1a</sub>)

Contains 0.0047 pound Abamectin per 4 oz. bottle

**Keep Out of Reach of Children**  
**WARNING**  
 See insert outsert for additional [complete] precautionary statements.

**NOTIFICATION**  
MAY 28 2002

### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

### Storage and Disposal

Do not contaminate water, food or feed by storage or disposal.

**Pesticide Storage:** Store in a cool, dry place and in such a manner as to prevent cross contamination with fertilizers, food, feed and other pesticides. Store in original container out of reach of children, preferably in a locked storage area.

**Disposal:** Do not reuse empty container; wrap and put in trash.

Refer to insert Outsert for complete Directions for Use.

**Net Contents 4 oz. (120 ml)**

[Sold by]  
**ArborSystems, LLC**  
Omaha, NE 68134

**PRECAUTIONARY STATEMENTS**  
**Hazards to Humans & Domestic Animals**

**WARNING:** Causes substantial but temporary eye injury. Do not get in eyes or on clothing. Prolonged or frequently repeated exposure may cause allergic skin reactions in some individuals. Harmful if inhaled or absorbed through the skin. Avoid contact with skin. May be fatal if swallowed. Use protective eyewear and rubber or neoprene gloves. Remove contaminated clothing and wash before reuse. Thoroughly wash with soap and water after handling and before eating, drinking or using tobacco.

**First Aid**

<b>If in Eyes</b>	<ul style="list-style-type: none"> <li>• Hold eye open and rinse slowly and gently with water for 15-20 minutes.</li> <li>• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye.</li> <li>• Call a poison control center or doctor for treatment advice.</li> </ul>
<b>If on Skin or Clothing</b>	<ul style="list-style-type: none"> <li>• Take off contaminated clothing.</li> <li>• Immediately rinse skin with plenty of water for 15-20 minutes.</li> <li>• Call a poison control center or doctor for treatment advice.</li> </ul>
<b>If Swallowed</b>	<ul style="list-style-type: none"> <li>• Immediately give one or two glasses of water and induce vomiting by gently touching back of the throat with finger.</li> <li>• Immediately call a poison control center or doctor for treatment advice.</li> <li>• Do not induce vomiting or give anything by mouth to an unconscious person.</li> </ul>
<b>If Inhaled</b>	<ul style="list-style-type: none"> <li>• Move person to fresh air.</li> <li>• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.</li> <li>• Call a poison control center or doctor for further treatment advice.</li> </ul>

Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may also contact 1-800-698-4641 for emergency medical treatment information.

**Note to Physician:** Early signs of intoxication include mydriasis (dilated pupils), ataxia (unsteadiness) and muscle tremors. Toxicity following accidental ingestion of this product can be minimized by inducing vomiting within one half hour of exposure. If toxicity from exposure has progressed to cause severe vomiting the extent of resultant fluid and electrolyte imbalance should be gauged. Appropriate supportive parenteral fluid replacement therapy should be given along with other required supportive measures (such as maintenance of blood pressure levels) as indicated by clinical signs, symptoms and measurements. In severe cases, observations should continue for at least several days until the clinical condition is stable and normal. Since abamectin is believed to enhance GABA activity in animals, it is probably wise to avoid drugs that enhance GABA activity (barbiturates, benzodiazepines, valproic acid) in patients with potentially toxic abamectin exposure.

{Note: The First Aid statements' grid format will be used if market label space permits; otherwise a paragraph format will be used.}

**Environmental Hazards**

This product is toxic to fish and wildlife. Do not apply directly to water. Do not contaminate water when disposing of equipment wash water or rinsate. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops. Do not apply this product to blooming crops if bees are visiting the treatment area.

**Physical or Chemical Hazards**

Do not use or store near heat or open flame.

4/11

For assistance, contact ArborSystems at 402-339-4459.

### DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

**DO NOT USE ON CROP-BEARING TREES**

#### Storage and Disposal

Do not contaminate water, food or feed by storage or disposal.

**Pesticide Storage:** Store in a cool, dry place and in such a manner as to prevent cross contamination with fertilizers, food, feed and other pesticides. Store in original container out of reach of children, preferably in a locked storage area.

**Disposal:** Do not reuse empty container; wrap and put in trash.

#### GENERAL INFORMATION

##### ArborSystems Injection System using the Patented Wedgle™ Tip and WedgeChek™

The ArborSystems injection system injects pesticides or micronutrients into a tree with minimal wounding. The system will inject chemicals into the area of bark separation where the chemical can actively be transferred to other parts of the tree.

**Spring through late summer is the ideal time for injection.** Injections made during the spring or summer will be more successful than waiting until the fall. Specifically, each tree needs to be inspected. The bark needs to be pliable and that depends upon local weather conditions.

Injections can be made either in anticipation of pest presence or after pests are observed. Pest control is anticipated to last a typical growing season, although it may be recommended to inject the plants one or two times per year or more often under severe and repeated pest pressure. This product has been evaluated for phytotoxicity on a wide range of ornamental plants. However, since all ornamental plants have not been tested, it is recommended that one plant be treated first to make certain that no phytotoxicity occurs. Do not use on sick plants or plants weakened by extreme environmental conditions such as heat, flooding, cold, etc.

#### How to Use the ArborSystems Injection System

1. Use protective eyewear and rubber or neoprene gloves when handling or installing the ArborSystems injection system.
2. Remove the small tab on top of the bottle and attach the bottle of chemical to the injector gun.
3. Attach the Wedgle™ Tip to the injector gun. Make sure the small hole in the tip is pointing straight up. Set the delivery volume on the syringe to 1 ml or ½ ml, as appropriate.
4. Determine the thickness of the bark. Insert the Wedgle™ Tip into the fissure or valley of the tree. If the tip penetrates more than the length of a WedgeChek™, the injection will be made in the fissure. If the tip penetrates less than the length of a WedgeChek™, the injection will be made through the tight outer bark of the tree.
5. Insert the WedgeChek™ Punch into the tree. Rotate the punch to separate the core from the tree bark and remove the punch from the tree. Squeeze the trigger to remove the bark core and make sure the removed core is as long as the WedgeChek™. Repeat this step while moving around the circumference of the tree. Be sure to follow the label directions on this insert the chemical bottle insert to determine how many injection sites are needed on any given tree. Usually this is approximately 1 injection for every 4 to 6 inches of circumference.
6. Put the WedgeChek™ on the Wedgle™ Tip, prior to inserting the tip into the tree.
7. Using a straight motion insert the Wedgle™ Tip into the tree until it stops against the wood. This will usually be about ½" on Elms, shorter on crabapple, oak and sycamore trees. As the tip is pushed into the tree, the Wedgle™ Tip cuts through the WedgeChek™ and the blunt-edged tip automatically stops when it reaches the wood.
8. Using a smooth motion, firmly squeeze both handles at the same time. This motion allows the bark to separate and the chemical to be deposited into the area. The WedgeChek™ plugs the hole, allowing the chemical to remain in the tree.
9. Slowly withdraw the tip and repeat this step while moving around the circumference of the tree.
10. Move laterally and make the next injection until the entire tree trunk has been treated. The WedgeChek™ may be left in the tree and used to inject the tree the following year.

Indications	Dosage
Indicated for the treatment of woody trees and shrubs for the control of Elm Leaf Beetles and Lace Bugs	1 ml per 4" to 6" of trunk circumference. <b>Note:</b> Depending on type of bark, the dosage per injection site may have to be reduced to ½ ml per site and the number of injection sites doubled.

## GENERAL INFORMATION

ArborSystems Injection System using the patented Wedge™ Tip and WedgeChek™. The ArborSystems Injection System injects pesticides or micronutrients into a tree with minimal wounding. The system will inject chemicals into the area of bark separation where the chemical can actively be transferred to other parts of the tree. Injections made during the spring or summer will be more successful than waiting until the fall. Specifically, each tree needs to be inspected. The bark needs to be pliable and that depends upon local weather conditions.

Injections can be made either in anticipation of pest presence or after pests are observed. Pest control is anticipated to last a typical growing season, although it may be recommended to inject the plants one or two times per year or more often under severe and repeated pest pressure. This product has been evaluated for phytotoxicity on a wide range of ornamental plants. However, since all ornamental plants have not been tested, it is recommended that one plant be treated first to make certain that no phytotoxicity occurs. Do not use on sick plants or plants weakened by extreme environmental conditions such as heat, flooding, cold, etc.

### HOW TO USE THE ARBORSYSTEMS INJECTION SYSTEM:

1. Use protective eyewear and rubber or neoprene gloves when handling or installing the ArborSystems Injection System.
2. Remove the small tab on top of the bottle and attach the bottle of chemical to the injector gun.
3. Attach the Wedge™ Tip to the injector gun. Make sure the small hole in the tip is pointing straight up. Set the delivery volume on the syringe to 1 ml or 1/2 ml, as appropriate.
4. Determine the thickness of the bark. Insert the Wedge™ Tip into the fissure or valley of the tree. If the tip penetrates more than the length of a WedgeChek™, the injection will be made in the fissure. If the tip penetrates less than the length of a WedgeChek™, the injection will be made through the tight outer bark of the tree.
5. Insert the WedgeChek™ Punch into the tree. Rotate the punch to separate the core from the tree bark and remove the punch from the tree. Squeeze the trigger to remove the bark core and make sure the removed core is as long as the WedgeChek™. Repeat this step while moving around the circumference of the tree. Be sure to follow the label directions on this insert to determine how many injection sites are needed on any given tree. Usually this is approximately 1 injection for every 4 to 6 inches of circumference.
6. Put the WedgeChek™ on the Wedge™ Tip, prior to inserting the tip into the tree.
7. Using a straight motion insert the Wedge™ Tip into the tree until it stops against the wood. This will usually be about 1/2" on Elms, shorter on crabapple, oak and sycamore trees. As the tip is pushed into the tree, the Wedge™ Tip cuts through the WedgeChek™ and the blunt-edged tip automatically stops when it reaches the wood.
8. Using a smooth motion, firmly squeeze both handles at the same time. This motion allows the bark to separate and the chemical to be deposited into the area. The WedgeChek™ plugs the hole, allowing the chemical to remain in the tree.
9. Slowly withdraw the tip and repeat this step while moving around the circumference of the tree.
10. Move laterally and make the next injection until the entire tree trunk has been treated. The WedgeCheks™ may be left in the tree and used to inject the tree the following year.

### INDICATIONS

Indicated for the treatment of woody trees and shrubs for the control of Elm Leaf Beetles and Lace Bugs.

### DOSAGE

1 ml per 4" to 6" of trunk circumference. **Note:** Depending on type of bark, the dosage per injection site may have to be reduced to 1/2 ml per site and the number of injection sites doubled.

### NOTICE OF WARRANTY

ArborSystems warrants that this product conforms to the chemical description on the label and is reasonably fit for use under average conditions when used strictly in accordance with the directions on the labeling. ArborSystems does not make or authorize any agent or representative to make any other warranty, guarantee or representation, express or implied, concerning this product.

Federal Express  
May 20, 2002

AB 8336 1845 9987

Mr. Thomas C. Harris  
Document Processing Desk - **NOTIF**  
Office of Pesticide Programs - **7504C**  
U.S. Environmental Protection Agency  
1921 Jefferson Davis Highway  
Crystal Mall 2, Room 266A  
Arlington, VA 22202-5601

Dear Mr. Harris:

**Subject:** ArborSystems, LLC  
Greyhound™ Insecticide  
EPA Reg. No. 69117-2

On behalf of its client **ArborSystems, LLC**, RegWest Company is submitting the attached materials as notification of a label revision for subject product. RegWest Company will act as sole agent in this endeavor.

Attached are the following:

1. Application for Pesticide: Other
2. One draft **Reference Label**
3. One copy of market labeling

The **Reference Label** illustrates the revisions as described below. The revisions are primarily being made due to the new packaging concept. Previously, for the professional market the product was sold in a 4- ounce container with an outsert (in a plastic sleeve) attached to the bottle. We will now be selling the product with the following components:

1. A "generic" box with the vertical self-adhesive label attached to the outside of the box.
2. The 4-ounce bottle with the horizontal self-adhesive label attached to it. The bottle is placed in the box.
3. The package insert that will be placed in the box with the product.

The following changes were made to the label (pages refer to the **Reference Label**):

1. Changed "outsert" to "insert" as a descriptor for where to find additional precautionary statements (page 1).
2. Changed "outsert" to "insert" as a descriptor for where to find complete Directions for Use (page 1).
3. Dropped ",LLC" from the company name. ArborSystems is still a limited liability corporation, however, for consistency they no longer desire the "LLC" to be a part of the logo and name on their marketing materials (pages 1, 2 and 4).
4. Changed "below" to "inside" as a descriptor for where to find additional precautionary statements (page 2)
5. Deleted redundant verbiage:
  - a. Omaha, NE 68134 – added website (page 1);
  - b. "For assistance, contact ArborSystems at 402-339-4459" (page 3);
  - c. "Spring through late summer is the ideal time for injection" (page 3).
6. Changed "the chemical bottle outsert" to "this insert" (point number 5, page 3).
7. To the outer box added the verbiage about, and the graphic of, the injector gun.

Please contact me at (970) 353-0611 if you require additional information or have any questions.

Regards,  
**RegWest Company**
