SAVE THE FLOWERS!

ACCEPTED

DEC 13 1995

Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, for the pesticide registered under EPA Reg. No. 69274-1

DEER NO NO.

A WAY TO KEEP DEER FROM EATING YOUR PLANTS.

We are in the Connecticut woods, and we have tons of deer. Hungry deer. They love our day lilies and even eat our lilacs. [Many experts say deer don't eat

lilacs.] Out of frustration, We produced our own deer repellent. We call it Deer No No. And it really does work; We've tested it for 2 years, in all kinds of conditions, and for the first time in twenty years the deer left my day lilies alone. Deer No No. will last about a year even with snow and rain.

Deer No No has a specially formulated scent which deer hate but is not unpleasant to humans. It's in pack form which will hold the scent for about a year.. Deer No No comes in a beautiful ,very sturdy green net bag with a string, so all you do is hang it on a branch of your bush, or stake it next to your flowers. Or even tie it to a stick. Deer No No should be placed next to the plant. That's all there is to it. Tell your friends about us and remember, protect those plants now.

Our EPA registration number is #69274-1
