Treating the pool

Pools Previously Treated with Chlorinating Chemicals

Important - REVACIL is incompatible with chlorinating chemical products. Consult your authorized Dealer of REVACIL for information on balancing your pool water.

Check with chlorine test kit for free and combined chlorine prior to the beginning of neutralization. To destroy chlorine, add STOP CHLORE chlorine neutralizer per label directions. Filter overnight.

Check with chlorine test kit. If free chlorine is detected, repeat neutralizer treatment.

Freshly Filled and Dechlorinated Pools

Start up with REVACIL

Note : If the pool water contains algae or is hazy, consult the problem-solving section of the "Pool Care Guide," available from your authorized Dealer of REVACIL.

* Backwash or clean pool filter. Check pool pH; adjust to 7,0 - 7,8 if necessary.

* Add REVACIL to give a content of 50 ppm (1/2 gallon product/10,000 gallons of pool water).

* After 24 hours, check pH and REVACIL concentration with the test kit for REVACIL and adjust if necessary

Normal Pool Routine

* Every week, check REVACIL concentration and pH.

* Maintain REVACIL concentration at about 50 ppm. If concentration falls 10 ppm or more, add a top-up dose. The level should not be allowed to drop below 30 ppm. For example, to raise the REVACIL level 10ppm, add 1 pint per 10,000 gallons of water. Consult the booklet, "The Pool Care Guide for REVACIL," for calculation instructions.

NOTE : REVACIL AND CHLORINE ARE INCOMPATIBLE.

Refer to the Pool Owner's Guide for REVACIL for information on how to deal with accidental chlorination.

If algae development, cloudiness, or pool problems occur or additional information on water quality is desired, consult "The Pool Care Guide for REVACIL," available from your Authorized Dealer of REVACIL.
